Apples—New North Carolina, are: 6¾@8c. for fair; 8¾@9c for choice; 10@10¾c. for fancy sliced. Patent evaporated apples, choice, in cases; 14¾@15c.; do. fair to good, 12¾ @13¾c.; N.Y. State sliced new, 8@8¾c; quarters, choice, 6¾@ 7c.; western quarters, common and old, 4@4¾c.; new southern quarters at 4@4¾c.; new N. C. peeled peaches at 16@17¾c., do. Georgia, 13@16c. Peaches, Delaware evaporated, peeled at 25@28c.; do. unpeeled at 13@15c.; new halves at 8c. Blackberries at 10c. for new. Raspberries at 28@29c. Pitted cherries at 18@20c.

Exports for week, 75 bbls. apples; do., receipts, 1,110 pkgs. various.

EGGS.—Receipts for the week, 10,432 pkgs.; do. last week, 13,668 do. The market has had a tame run, but with prospective better business for next week prices are named with more confidence. For other than mixing use there must be a newer, even grade of good quality in wholesome parcels of Western to draw a steady trade. Limed are selling finely well. Near points fresh, 27@28c.; State and Penna., 21¾@25½c.; Canadian 19½@20c; Western, choice 22@23c. off grades, 18@19c. State limed, 17@18c.; Western, 16@17c.; Canadian, 16@17.

FLOUR.—Has tended to rather better figures on increased demands on export and home trade account Latest prices are: $4.90@5 40 for inferior to choice superfine State; $5.40@5 75 for inferior to good extra do., odd lots and lines; $5.75@6 00 for good to very choice do.; $4 00@5.50 for inferior to very fancy superfine Ind., Iowa, Michigan &c.; $5 40@5 75 for inferior to good shipping extra do., and $5 75@6 00 for good to choice shipping extra do.; inferior to about choice white wheat extras, $5.90@6.75; choice to fancy do. at $6.85@8 00; red and amber winter wheat, inferior to fancy grade and family, at $5,85@7.75; round hoop Ohio, $5 65@6 00, and trade and family brands of do. at $6 10@7.75 the latter rate for fancy: St. Louis at $5 90@6 90 for inferior to very good extra; $6 90@8 00 for very good to fancy; Minnesota clear, very inferior to fancy, $5.40@7.00; Minnesota "straights," very inferior to fancy, $6 00@7.75, and patent poor to very fancy at $6 75@8.75; unground stock at from $5.85@6 75; city mill extra at $5.40@6 75 for common to very choice for West Indies (fancy do. quoted at higher figures); do. for England, $5 50 6.00 for poor to choice; do. trade and family extras, $6 65@7.50 do. for South America, $6.60@7.00; No. 2 at $4.20@4.90 for poor to very fancy.

FRESH FRUITS.—Receivers of apples are rather anxious about the condition of incoming lines, as sudden variation of temperature is not favorable for quality. Good stock firm and going abroad liberally. The pear crop seems about gone. California will have a very clean market if shipments are made. Cranberries will move well the coming week; prices firm. Florida oranges have no steady inquiry, as quality is uncertain.

Apples—Kings State good to choice, per bbl., $2.75@3; Baldwin, $2.25@2 50; Greening, $1 87@2.12; winter mixed, good to choice, $2@2.25; poor to fair, $1.25@1.75. Cranberries—Cape Cod, fancy, per bnl., $7@7.25; good to choice, $6.25@6 75; fair to good, $5@6.25; Eastern large round hoop bbls., fancy, $6 50@7; do., fair to choice, $5@6; Jersey, fancy, per crate, $1 87@2; good to choice, per crate, $1.50@1.75. Pears—Vicar of Winkfield, per bbl., $2.50@3.50; Lawrence, $1@5; Boston, choice varieties, per box, $2.50@5; cooking, per bbl., $2@2.50. Grapes—Catawba, State, choice, per case, $2 25@2.75; do., poor, $1.25@1.75; do., loose, per lb., 3@6c.; Isabella, State, 18 3-lb. boxes, $1.25@1.50; bulk, per lb., 2@5c. Oranges—Fla., choice, per ½ bbl. crate, $3.50@4; fair, $2@3; choice, per bush. crate, $2.50@3; fair, $1.25@2. Peanuts come forward freely, but they are selling well. The Producers' Price Current gives the following crop statistics:

	Virginia.	Ten'ssee.	N.Carol'a.
1879-80	1,100 000	550,000	120 000
1878-79	875,000	410,000	85,000
1877-78	405,000	305.000	85,000
1876 77	780,000	50-,000	125,000
1875-76	450,000	285,000	100.000

Peanuts, Va., new, hand-picked, per lb., 5@5¼c.; new, extra prime to fancy, 4@4½c.; do., good to prime, 3¾@3¾c.; shelled, new, 4@4½c; old, 5@5½c; Chestnuts, per bush., $1@1.50; Hickory, shellbark, $1@1.12; bull nuts, Ohio, 40c.; B. walnuts, 40@50c.; Pecan nuts, per lb., 9@9½c.

Exports for week, 17,865 bbls. apples.

FURS AND SKINS.—Dullness abroad and large stocks carried over will tend to start a low market here this season.

No. 1 quality.	Nor. & East.	W. & S. W.
Otter, each	$5.00@7.10	$4.00@5.00
Grey Fox	65@ 65	40@ 50

Skunk, striped		15@ 20
Skunk, white		8@ 10

GRAIN.—In wheat there has been less interest shown by speculators, but a fair export trade, and shipments for the week reach 1,300,000 bushels; prices closed strong; latest sales are of No. 1 amber at $1.45; 2 amber at $1.43@1.44½; ungraded amber at $1.38@1 41; No. 1 white at $1.44¾@1.44; do. for November at $1.43¾@1.44; do., December option, at $1.41¾@1.45; do., January, at $1.48@1.48¾; No. 2 white at $1.39@1.40; ungraded white at $1.41@1.43¾; No. 1 red at $1.41¾@1.45¾; No. 2 red at $1.44@1.44¾; do., November option, at $1.44¾@1 45; do., December option, at $1.45¾@1.47½; do., January option, at $1.49@1.49¾ No. 3 red at $1.35; ungraded red at $1 25@1.45; mixed winter at $1.40@1.41¾; No. 2 Chicago spring, at $1.35; New York No. 2 spring, at $1.34@1.34½; do., November, at $1.34½; do., December option, at $1.35¾@1.35½; No. 3 spring, at $1.29@1.32; ungraded spring at $1.33@1.37. Rye favors sellers; prime State sold at 90@90¾c. Corn is higher and strong, with increased demand; latest sales are of New York No. 2 at 60¾@61c afloat; do., November at 60¾c; do., December, at 61½c.; New York steamer mixed at 59@59½c.; do., December, at 58c. ungraded Western mixed at 59¾@61c; steamer white at 61¾c.; No. 3 at 58c.; No 2 white at 61c. Oats are more freely offered and favor buyers; latest sales are of New York No. 1 white at 47c.; New York No. 2 white at 46¾@46¾c.; New York No. 3 white at 44½@44c.; New York No. 1 at 45¾@46c; New York No. 2 at 45¾@45¾c.; New York No. 3 at 45@45¼c; New York rejected at 43¾@44c.; ungraded white Western at 46@48c.; mixed Western at 45@47c.; white State at 47@49c; mixed State at 64@47½c.; No. 2 Chicago at 46c delivered.

HAY AND STRAW.—There is a full demand strong prices.

Shipping hay quoted at 50@55c.; retail lots at 60@75c. for medium, and 75@80c. for prime; clover at 40@50c. Straw at 75@80c. for long rye, 50@55c. for short rye and 45@50c. for oat.

Exports for week, 1,722 bales.

HONEY—There is a fair demand, and the novelty of the market is after the dragging trade of back seasons, prices have a firm tone. White clover, single comb, bxs., ₱ lb, 19@18c.; larger glass bxs., ₱ lb, 15@17c.; Buckwheat, in glass bxs, ₱ lb, 13@15c.; Clover, extracted; ₱ lb, 12@14c.; Strained, ₱ lb, 9@10.

HOPS.—Emmet Wells in his circular says: "Inactivity is still the ruling feature. There is a marked falling off in receipts, and exporters have taken only 894 bales against 1,602 last week But a more important feature is the arrival here of an invoice of German hops, which, though perhaps not of sufficient quantity to influence the market unfavorably is looked upon by many as a forerunner of what may possibly follow in the shape of important arrivals. The duty of 8 cents per lb. on foreign hops will, it is believed, be no particular barrier against importations, as it is but a small advance on the present high prices of American that brewers will not count. Our extreme quotations this week are nominal, and the general market shows considerably less firmness than last week."

	Bales.
Receipts for the week	2,687
Total receipts since September 1, 1879	60,8 7
Total receipts for same period in 1878	24,098
Export clearances for the week	894
Total exports since September 1, 1879	37,554
Total exports for same period in 1878	5,486

Quotations are for New Yorks, new crop, choice, 45@47c; New Yorks, new crop, medium, 40@44c. New Yorks, new crop, low to fair, 35@37c.; Eastern, new crop, 35@45c.; Wisconsin, new crop, 35@45c.; Yearlings, 7@8c Olds, all growths, 4@11c.; Pacific coast, new, 40@45c.; Pacific coast, olds (nominal), 9@14c.

OIL-CAKE.—Western is higher; sales at $33 ₱ ton.

PROVISIONS—Have been more active at variable prices, closing week at for pork, $10.90@10.95 for Nov.; $10.90@10 95 for Dec.; $10 95@11 for sellers' option, old or new, for Jan.; $12.35 for new do. for do., and $12.35 for February.

POULTRY AND GAME.—Live poultry has sold well to fill extra wants of fresh, bright-looking stock, which was hard to find early in the week Fowls and chickens, 7@8c.; roosters, 5c; turkeys, 9@12c.; ducks, 40@70c ₱ pair. Geese, $1@1.50.

Dressed poultry started off this season with a most discouraging week. Much western had to be sacrificed for about freight expenses. At these close affairs look more favorable; rough stock is out of the way, and cold weather has revived a good demand.

Turkeys, Jersey, good to prime, 14@16c.; State, Northern Ohio and Pennsylvania, prime, 14@15c.; other Western, prime, 14c.; fair to good, 13@13c.; poor, 15@16c.; Phila., dry-picked, 16@ 7...; do., chickens, 13@14c.; do., Jersey per lb. 14@14c; do., State, Mich., Northern Ohio and Penn., prime, 12@ 3c.; other western, prime, 11@12c; fair to good, 10@11c; poor, 8@9c. Fowls, Phila., dry-picked 12@12c.; Jersey good to prime, 11@12½c.; State, do., 10@11c, Western, do., 9@10c.; poor to fair, 8@9c. Ducks, Phila., dry picked, 14@15c; Jersey, 13@14c.; State, 12@14c.; Western, 10@13c.; do., geese, Phila., dry-picked, 11@12c. N J, 9@11c; State, 9@11c.; Western, 1@ 0c.; squabs, white, ₱ doz., $1 75@3; do, dark, $1.25@1.50.

Game has also got over its bad spell, and prices are assuming cold weather firmness for all sound stock.

Quail, trapped, ₱ doz, $3@3.50; Partridges St te, prime, ₱ pair, 90@$1.; Western, 80@90c.; soft and drawn, 40@60c.; Grouse, prime, $1.25; Wild pigeons, stall fed, ₱ doz., $1 75; flight, southern, 25@30c.; Woodcock, State, ₱ pair, 50@70c.; western, 45@60c.; English snipe, ₱ doz., $1 75@2; plover, $1.50@2 Tame pigeons, shot, ₱ doz., $1.25; Rabbits ₱ pair, 30@35c.; Hares, 30@40c.; Minn. venison, short saddles, ₱ lb., 12@13c.; State & west., short saddles, 8@12c.; whole deer, 3@10c

SEED.—Clover is quiet and quoted at 8¾@9¼c. for prime to choice western and 9¾c. for extra choice. Timothy quiet at $2.60@2.75.

TOBACCO.—Export movement continues moderately, but there is a fair home trade, with prices without important change.

VEGETABLES.—A gradual improvement to be noted in the demand which may develop into activity; prices are much the same as for last week. Peachblows are in stock. Onions have improved again with a falling in receipts. Other items steady. Sweet potatoes have advanced with decrease in supplies. Early Rose, Maine, per 6-bush. bbl., $1.75@2; State Peachbows, 6-bush., $2; State, $1 50@1.62; in bulk, per bbl., 1.25@1.37; Snowflake, 6-bush. bbl., $1.75@$1.50; Peerless, $1.25@1.37; bulk, per bbl.; New Jersey Peerless, 87c.@$1; Sweet potatoes, Del., $3; N J. and Va., $2; squash, marrow ₱ bbl., 75c.; do. Hubbard, $1@1.50; cabbage, per 100, $3@5.00; red do., cabbage, $4@5; onions, white, per bbl. $2 80@3; do., yellow, $2.50@2.75; do., red, $2 25@2.50; do., Chester, $2 25 beets, N. J., 75c.@$1 Russia turnips, 75c.@$1; carrots, 75c.@$1; pumpkins, per 100, $2@5; cauliflower, ₱ bbl, $75c.@3; celery, per doz., $1.

Exports potatoes for week, 6 100 bbls.

WOOL—Has further advanced, the demand continuing active. Supplies much reduced and the reports from the auction sales abroad showing better prices Quotations are for domestic fleeces:

Ohio, Pennsylvania and Virginia—XXX and picklock, 50@52c.; XX, 48@50c.; X, 47@ 0c. No. 1, 46@42c.; No. 2, 45@47c.; common, 40@41c.; combing, 43@52c.

New York, Michigan, Indiana and Wisconsin—XX 46@45c.; X, 40@45c; No. 1, 47@ 9c.; No. 2, 42@46c.; common, 38@42c.; combing, 47@50c.

Iowa, Vermont and Illinois—X and XX, 38@45c.; No 1, 45@49c.; No. 2, 41@44c.; combing, 46@48c.

Missouri, Kentucky and Tennessee — Washed fleece, 45@50c. unwashed fleece, 33@40c.; unwashed combing, 33@40c.

LIVE STOCK MARKETS

NEW YORK, Saturday, Nov. 22.

BEEVES.—Receipts for the week, 10,633 head; do. last week, 9,518 do. The market is a trifle better since Wednesday, and trade about covered the receipts. Cold weather has improved the demand for wholesale cattle, but buyers will operate cautiously for a week or so, as poultry will diminish butchers' trade to some extent. At 10 o'clock a. m. the market appeared to be dull, but buyers patiently waited and sellers had no difficulty in making a good clearance at full former quotations, or 7½@10¾c. per lb. for common to extra steers, and $3.50@3.50 ₱ 100 lbs. for fat bulls and old dry cows. General sales of fair to good steers were at 8¾@9¾c. ₱ lb, to dress 56 lbs. The best 10 steers in market averaged 1,550 lbs., and sold at 10¾c., to dress 57 lbs.; poorest car-load of native steers averaged 1810 lbs., and sold at 7¼c, to dress 55 lbs. Shipments for the week, 339 live cattle and 5,296 quarters of beef to Great Britain, and 31 live cattle to the Bermudas.

MILCH COWS.—There is no change to note.

HOGS.—Receipts for the week, 29,798 head; do. last week, 41,798 head. Supplies have run light and prices higher under strong competition; good to prime, $4@$4.87 ₱ 100 lbs.

Quotations for dressed have ruled uncertain owing to bad weather. Pork tenderloins in cases, 9c.

VEAL CALVES.—Supplies have been small, and choice. Harlem and N. J. both have made 7c@7½c.; Grassers, 2½c@2½c. Shipments of hog dressed will resume if the weather holds.

SHEEP AND LAMBS.—Receipts for the week, 29 349 head; do. last week, 27,500 do. The demand was fair at about the advanced prices noted yesterday, and a larger business was done at 4c @5¼c ₱ lb for sheep and 5½c.@6¼c. for lambs. The pens were entirely cleared, however, and the tendency towards the close favored buyers. 227 State sheep, 122 lbs average for export at 5¼c ₱ lb. Shipments for the week, 1,633 carcasses of mutton and 60 live sheep.

Reading for the Young.

LETTERS FROM THE COUSINS.

UNCLE MARK:—I have been thinking for some time that I would like to join the Horticultural Club, but I have put it off because I thought I was almost too old—just out of my "teens." But when I read the letters from quite a number of aged aunts, I concluded that the best thing for me to do was to write and see if you would accept *me* as a nephew. I have taken the RURAL for about three years, and like it very much. I raised a nice pink Geranium from the seed received from the RURAL two years ago. The seeds that were sent me this year did not germinate on account of the dry weather. Two years ago I budded a fine Gen. Jacqueminot Rose on an old Rose-bush which I have had seven years, and which had never blossomed. The bud grew, and this year it had a number of fine Roses on it. I have also budded a white Rose on the same stock, which I think will live. It will be pretty to have the red and white Roses blossoming on the same bush at the same time. I would advise all the Rural cousins to try budding. It is very easy, and I think all could succeed after a little practice. I have another thing which I would like to tell you about. This summer, one of my Geraniums blossomed, and after the petals had fallen off, a new shoot came right out from the cluster, and this grew, and, after a while, it blossomed. Is this anything unusual? I have tried to make a little sketch so that you may better understand what I mean. And now, hoping to be received as your nephew, I will say good-bye, for a short time.

Fair Haven, Conn. QUINNIPIAC.

[The above letter leads me to say a few words on some

Curious Freaks of Plants

which perhaps may interest the cousins. In answer to Quinnipac (that must be Greek) I will say that though it is not very common for Geraniums to push a branch through the flower-cluster, as was the case with his, still they have often been observed to do so. But perhaps none of the cousins have seen such a case before, and I have therefore had an engraving made from the sketch this new member of the Club sent me. As may

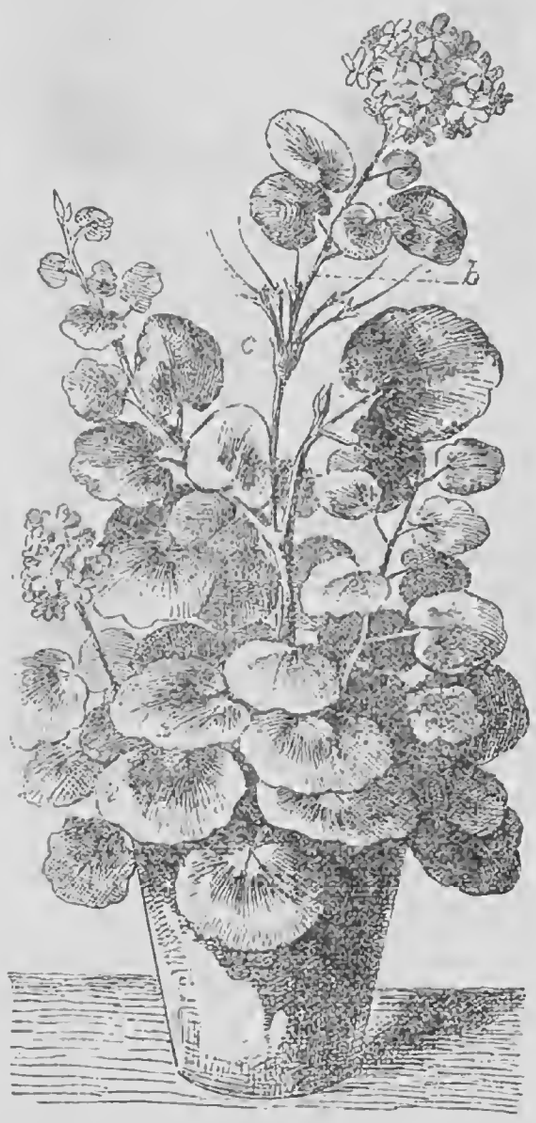

FIG. 1.

be seen the seed pods of the old flower-cluster, from which the petals have long since fallen. Now, it is generally the case with Geraniums in pots, that when the flowers fall, the flower stalk also withers; but in this case it has received new vigor, and instead of withering has pushed out the shoot *b*. The artist thought, no doubt, he would improve the picture greatly by putting a flower-cluster on top, which he did, and by so doing committed a serious blunder. But I saw at once that it was an excellent illustration of mistakes that are often made by persons who do not observe correctly, and that it teaches a timely lesson of the necessity of seeing things "straight," and I therefore admit the picture. You must all by this time have seen what the trouble is; if you have not you will see it immediately when you call to mind where the flowers of a Geranium appear, whether on the end of a branch or in the axil of a leaf. The artist put the flower-cluster on the end of a branch, but in reality it always springs from the axil of a leaf. It is of the utmost importance to all students of the natural sciences, and particularly so to all botanists, that they should make correct observations. A botanist should see everything about a plant at once, and remember it. Such conspicuous points as whether a plant is large or small, trailing or upright, anybody will notice, but the student should go farther and notice the position of the leaves, their shape, how the flowers appear and other peculiarities.

But I am straying from the subject. Another curiosity, and one not so common as the above, is shown in Fig. 2. It is a spike of the common plantain, or ripgrass, that grows along road-sides. It was exhibited at a meeting of a botanical club not long since, where all the learned doctors regarded it as a great curiosity, and thinking it might interest the cousins, I have had it engraved. It will be remembered that generally this ripgrass bears no leaves at all on the flower-stalk, but in this case leaf-buds have been formed at the top of the spike and a whorl of leaves pushed out. There are many other similar cases. In the Rose we often meet with instances in which the stem has grown through the flower and formed leaves and more flowers beyond. Indeed, some varieties always do this.

FIG. 2.

Indian corn, which all are familiar with, bears the tassels of male flowers on tall stalks, and the ears are set lower down in the axils of the leaves, but frequently there are kernels and imperfect ears formed on top of the stalks among the flowers on the tassels. Instances might be multiplied, but this will be sufficient for the present.

UNCLE MARK.]

GRANDMA'S WOLF STORY.

"ONLY one more story, about when you were a little girl, and lived in the woods," said Frank.

Grandma drew off her spectacles and shut her book. She leaned her head back against the large easy-chair and shut her eyes, thinking.

"I remember, as if it were only yesterday," she said, raising her head and looking at the children who had gathered around her. "I was only seven and my little brother wasn't a year old. 'I'm going to the spring-house,' said mother, 'and you must stay in the room and rock the baby if he wakes.' So I took my knitting, for I had learned to knit, and was very proud of the stocking that was growing under my arm. It was a cold day, late in the fall, and all the doors were shut. Baby slept and I knitted for half an hour. Then he awoke and began to cry. As I got down from mother's great easy-chair I thought I heard a strange noise outside. It wasn't Lion, for he had gone off with father to the mill. Something rubbed against the door and made the latch rattle. I felt afraid, and went to the door and fastened the bolt. I stood still, listening, with baby in my arms—he had stopped crying—and could hear my heart thump, thump, thump!

"All at once there came a cruel kind of bark, and then a snarl. A moment after the window broke with a loud crash, and I saw the long head, open jaws, and fierce eyes of a wolf glaring in upon me. An angel sent by our Father in heaven must have told me what to do. The wolf was climbing in through the small window, and to have lingered but a second would have been death. Moved as if by a power not my own, and without thinking what was best to do I ran, with baby in my arms, to the stairs that went into the loft. Scarcely had I reached the last step ere he was in the room below. With a savage growl he sprang after me. As he did so I let the door, which shut like a cellar-door, fall over the stairway, and it struck him on the nose and knocked him back. A chest stood near, and something told me to pull this over the door. So I laid the baby down and dragged at the chest with all my strength. Just as I got one corner over the door the wolf's head struck it and knocked it up a little. But before he could strike it again I had the chest clear across. This would not have kept him back if I had not dragged another chest over the door, and piled ever so many things on top of these. How savagely he did growl and snarl! But I was safe.

"And now I thought about my mother. If she should come back from the spring-house the wolf would tear her to pieces. There was only one window or opening in the loft, and that did not look toward the spring-house; and so there was no way in which I could give her warning, or let her know, if she had seen the wolf, that we were safe. For a long time the wolf tried and tried to get at us, but at last I could hear him going down the stairs. He moved about in the room below, knocking things around for ever so long, and then I heard him spring up to the window. At the same moment I heard my father's voice shouting, not far off. Oh, how my heart did leap for gladness! Then came Lion's heavy bark, which grew excited, and I soon heard him yelling down the road in the wildest way. The wolf was still in the window. I could hear him struggling and breaking glass. Lion was upon him, when my father called him off in command. All was silent now, but the silence was quickly broken by the sharp crack of a rifle, which sent a bullet into the wolf's head, killing him instantly.

"'Father, father!' I cried from the loft window. He told me afterward that my voice came to him like one from the dead. He ran around to that side of the house. Mother was with him, looking as white as a sheet. I saw them both clasp their hands together and lift their eyes in thankfulness to God. When I tried to pull the chests away I could not move them an inch. So father had to climb up by a ladder to the loft window to release baby and me from our place of refuge. Mother did not know anything of our danger until she had finished her work at the spring-house. Just as she came out she saw the wolf's head at the window, and at the same moment father and Lion appeared in sight."

"I wonder the wolf didn't get you," said Frank, with wide-open eyes, breathing deeply.—*Christian Advocate.*

Sabbath Reading.

TWO THOUSAND YEARS AGO.

Two thousand years, two thousand years,
Our bark o'er billowy seas,
Has onward kept her steady course
Thro' hurricane and breeze.
Her Captain was the Risen One—
He braved the stormy foe,
And still He guides Who guided her
Two thousand years ago.

Still onward rides our gallant bark,
With all her canvass set,
In some few nations still unknown,
To plant her standard yet—
Her flag shall float where'er a breath
From human life shall glow;
And millions bless the bark that sailed
Two thousand years ago!

Not unto us, not unto us,
Be praise or glory given,
But unto Him who watch and ward
Hath kept for her in heaven;
Who quelled the whirlwind in its wrath,
Bade tempests cease to blow,
The Lord Who launch'd our vessel forth,
Two thousand years ago!

Then onward, speed thee, brave old bark,
Speed onward in thy pride,
O'er sunny seas and billows dark,
The Holy One thy guide;
And sacred be each plank and spar,
Unchang'd by friend or foe,
Just as she left Jerusalem,
Two thousand years ago!

BY THEIR FRUITS SHALL YE KNOW THEM.

F. R.

THE religious beliefs and creeds of the world are now on trial, and by many persons they have been found wanting and retired with other matters which have been outgrown. The present unsettled state of religion has, perhaps, little effect on those of mature life whose convictions are not likely to be "blown about by every wind of doctrine," but with young people the case is different. They have never thought over matters of conscience for themselves, but have simply accepted the faith of their fathers, on trust, and when the narrow creeds they have been trained in, are intelligently assailed, they immediately conclude that Christianity itself must be a lie, since particular church tenets have been proven false.

So far as a man's moral nature is concerned, what matters it whether the opening chapters of Genesis contain a scientifically accurate account of the creation or are simply a pictorial way of accounting for the material world as we find it? Why quibble with scientists and liberals over matters of this class? The questions which are of vital concern to Christians are not, whether the Bible is infallible and inspired, or whether Moses did or did not write the books ascribed to him, but was there a Christ and what were His doctrines?

That Christ really lived we have the testimony of profane as well as of sacred writers; about that there can be no question. As to His doctrines, or His system of morals, it is: "Love the Lord thy God with all thy heart and thy neighbor as thyself." The whole duty of Christians is thus epitomized by Christ Himself. The man who conscientiously follows the command, "Love the Lord thy God," must strive to make himself more like the object of his affectionate devotion; to elevate, refine and spiritualize his nature. To "Love thy neighbor as thyself," a man may neither lie, nor steal, for by so much is his neighbor defrauded out of the truth or of his property; neither may he covet and, least of all, can he give free reign to his baser nature. For by his example he *may* tempt others to sin, and he *does* encourage wickedness in the already vicious.

Looked at in a common sense way Christianity appeals to the noblest part of man and stimulates him to be truthful, honorable and righteous. Its most determined opponent cannot charge that Christianity degrades men. Can as much be said for any one of the various systems which are offered to us as modern improvements on the Christian religion, and whose founders and apostles expend most of their energies in picking flaws in the old faith?

An avowed Agnostic—Agnosticism is the word now used to designate a hostile attitude to Christianity—has given to the world in a recent issue of the British North American Review, a sketch of himself, for the express purpose of showing the actual outcome of liberal ideas as exemplified in his own life. His most salient characteristics, by his own showing, are a colossal egotism, an intense selfishness, and a decided tendency to pander to his most ignoble passions. Space will not admit of a review of his "Confessions" but as an example of his selfishness the following is given. He does not believe in matrimony and so he persuaded an attractive respectable young woman to live with him, without the usual formal ceremony. They had been living together for sometime, when he fell ill. The woman nursed him tenderly and patiently through a tedious sickness and when he was convalescent she pleaded with him to make her his wife before the law, and he *refused*. If he held the priest in contempt the magistrate was still left and he could without sacrificing any principle have had a civil marriage, but no! Not even to please the woman who had sacrificed so much for him nor for the sake of his innocent little children would he consent.

That woman occupies a position which places her on a level with the most degraded of her sex, and the children are dishonored from their birth, and for what? To gratify the whim of a man whose god is himself. An application of the Golden Rule of the religion we are said "to have outgrown" would have made that woman a respected wife and her children a blessing and an honor.

No clearer evidence of the measureless superiority of the Christian religion over any system of morality invented by man, could possibly be given than this contrast between the life of Christ and that of the Agnostic.

Verily, "by their fruits shall ye know" both men and systems.

Various.

BRIEFLETS.

SALT is a very important—not to say indispensable—article in the dairy. The International Dairy Fair appreciates this fully. . . Are English sparrows useful birds or are they pests?" Here is another irrepressible question. . . Dr. Hoskins says that a Chicago banker let the cat out of the bag when he said: "If the farmers were out of debt, they could hold their wheat and corn and derive the natural benefit of the inevitable rise in prices before another harvest." . . . Nothing strikes us more unpleasantly than to find a believer in the Christian religion afraid of scientific studies. How weakly grounded must that faith be which dreads increase of knowledge about any of the works of its God! . . . Calling each hog three feet long that was packed in the West the past year, and putting them in single file, they would reach 6335 miles, or from New York across the continent and Pacific Ocean, into China.—Drovers' Journal. What is the width of the Pacific Ocean? . . . Chicago wants the next World's Fair, but perhaps the next world won't have any.—Drovers' Journal. At any rate, Chicago had better wait until it gets there.—Land & Home. At this rate there will never be another World's Fair. . . . Everything is *booming* except the Ohio River. That is lower than ever before. . . . A Utica boot-black who was driven out of that city, claims consideration here as a Polish refugee.—Syracuse Sunday Times. . . . Another way to settle the Indian problem is to have all the white folks killed off.—Detroit Free Press. . . . When a lead-pencil drops from behind a man's ear, it always lands on the point and the latter breaks off. If the pencil has no point, the pencil doesn't drop.—N. Y. Star. . . . From Canada we learn that the wheat has made such a rampageous growth that some farmers have used the mowing machines, and others turned stock in to eat it off. . . . The Farmer's Advocate (Canada) offers its patrons this queer bit of advice. "November is *said* to be the best month to transplant evergreens, Try it!" We should much like to know *who said* that! . . . Put aside a little bucket of horse or cow manure. Water thrown upon this as needed will serve as the best of fertilizer for house plants during the winter. Remember, however, that *only* healthy plants that get the sun need any manure. . . One orchard on the Hudson River contains 38,000 trees and bushes. . . Geraniums for bedding next year can be kept in a frost proof cellar all winter, heel them in a box of light soil and, keep just moist enough to prevent shriveling. . . A good heating apparatus is now the most important feature of a greenhouse. . . The latest in Pansies is a variety with striped flowers. . . The Toad Flax—Linaria cymbalaria—is a handsome, creeping plant that may be used for covering greenhouse walls. . . Get a wheelbarrow, if you have'nt one; it is an indespensible implement. . . A new process for curing tobacco with water has been patented. . . No one objects to seeing the Indian summer here, but out in Colorado they say they would rather see the Indian somewher' else.—New Bedford Standard. . . . The term "*impertinent*" has been very properly applied to those who wish to regulate the style in which a farmer ought to live.—Ag. Gazette. . . . Good farmers are not to be easily frightened out of a business which they have followed with success; but unless they can hire land cheaper and labor cheaper; unless they can be free from vexatious covenants as to cropping, the nuisance of over-preservation of game and the constantly-increasing burden of taxation, they will cease to farm.—Idem. . . . For wheat, this is the very worst year within my memory.—J. J. Mechi, England. . . . Talmage is lecturing on "blunders." The greatest blunder of his life was when he became a minister instead of a circus manager. Bangor Commercial. We believe that. . . . The Michigan Farmer appears in new type and a new title-head, a decided improvement upon its old one. It is growing as pretty as it has long been valuable. . . . The Prairie Farmer thinks it would be a pity to drag Gen. Grant from his present exalted place in the hearts of his countrymen down in the mire of political strife. . . . The best thing that Gen. Grant can do is to buy an Experimental Farm and contribute notes to the Everywhere department of the RURAL NEW-YORKER. . . . The Western Rural remarks: "If you want to send a hundred-weight of grain from Chicago to New York, you will please pay forty cents a hundred pounds for doing it. In July last you might have sent it for fifteen cents a hundred. The roads have got the pistol to your head, and the only thing for you to do is to comply. . . . Insurance rates on the Lakes ended on the 15th inst.; railroads, therefore, will soon be raising their rates on freights from and to the West. . . . A model routine farmer is the East Indian ryot, who abominates to move on to the level road of progress out of the abysmal ruts sunk for him by untold generations of ancestral ignoramuses. . . . So obstinate is the ass in using any bull—generally the worst—on his cows, that it is seriously proposed that all unfit bulls should be castrated by the Government; that proper bulls should be licensed and branded, numbered and registered, and that all herds should be mustered and examined once every two years, to prevent evasion in the use of the good males. . . . Wherever hog cholera breaks out in the West, fat-rendering establishments soon make their appearance, to utilize the diseased hogs. The hog-collectors for some of these are accused of spreading the plague by dropping pieces of infested pork where healthy swine can find them, the eating of such morsels by sound hogs being the surest way of propagating the malady.

PERSONAL ITEMS.

A single hair from the head of a pretty woman brought $80 at a raffle for the benefit of General Hood's children, in Lowndes county, Ala., the other day.

Ex-Senator Simon Cameron tells an interviewer that the immediate cause of Senator Chandler's death undoubtedly was over-exertion in the late campaign.

Miss Josephine Meeker, daughter of the late Indian Agent who was killed by the Utes, has been offered a clerkship in the Interior Department by Secretary Schurz.

A recent social event in Pittsburg, Pa., was the marriage of a Philadelphian to the daughter of Dr Hostetter the patent medicine man. The presents of the bride's father were worth over $100,000, and it is reported that he has given her $1,000,000 in bonds.

Mrs. Ruth Richmore, of Brownington, Vermont, ninety-four years old, has given up her pipe, after smoking constantly for thirty years, and thus far has experienced no ill effects. Had she continued using the weed, however, it is not unlikely she might have died of it in another dozen years or so.

Senator Chandler's estate was set down as worth $3,000,000, but it is now said will not exceed $1,800,000. The estate consists of twelve stores and a fine dwelling in Detroit, a fine dwelling in Washington, a valuable farm near Lansing, extensive pine lands and $100,000 in bank stock.

Eliza Pinkston, of Returning-Board fame, was arrested at Canton, Miss., Saturday, charged with murdering her husband, who died suddenly. The couple had been married only two years, had had frequent quarrels, separated two weeks ago, met and quarreled Friday. The coroner has the case under investigation.

Poor little Prince Elmayou, son of the late unlucky King Theodore, of Abyssinia, died last week at Leeds, England, of broncho pleuro-pneumonia. He had arrived at Leeds but a little while before his death, having come up into civilized lands with the laudable purpose of going to school. He was only nineteen years old.

Judge Beaman, whom Gov. Croswell of Michigan appointed senator in place of Chandler, is in feeble health and declines, so that the governor has finally appointed Henry P. Baldwin of Detroit. Mr. Baldwin was governor for two terms (1869-71), and has been engaged in banking. He is a native of Coventry, R. I., and was formerly in business at Woonsocket, migrating to Michigan in 1838. Ex-Gov. Baldwin is a clean man and has the making of a good senator. In addition to his interest in the banks he is the leading boot and shoe manufacturer in the State.

QUINCHE & KRUGLER
17 MAIDEN LANE, New York, Sole Agents for the United States.

ASTHMA is a **terrible disease,** and its fearful effects are known to all sufferers. This distressing complaint, which has baffled the skill of the ablest physicians, is from first to last aggressive. Ordinary treatments are worse than useless. If neglected while a cure is possible, it may rapidly develop into consumption, particularly if accompanied with Bronchitis, Sore Throat, or Catarrh. Read what the "HERALD AND PRESBYTER" of Cincinnati says of

DR. B. W. HAIR'S ASTHMA CURE AND TREATMENT.

Why Should You Suffer and be Tortured by Day and by Night?

"Dr. Hair, who is a brother of Rev. Gilbert Hair, of Pittsburgh, and the late Rev. Samuel Hair, of Chicago, suffered from asthma for eleven years. His case was one of the most severe, disabling him from pursuing his practice as a physician. He made asthma a constant subject of reading and study for years, and with intense cure noted the symptoms and circumstances in his own case. He was led to adopt a new pathology of the disease in regard to its prime symptom and cause, and he constructed his remedy and treatment on this basis. His success in his own and other cases verifies his theory."

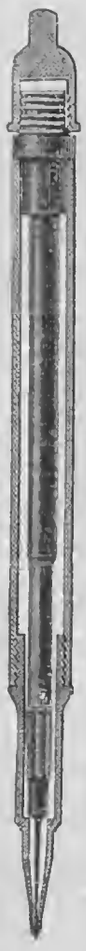
SATISFACTION ALWAYS GUARANTEED.

Consultation, and advice *free.* Send for Treatise containing testimonials and also the most unequivocal testimony to the curative power of my treatment, from many persons of high character and intelligence who have been cured. Address,

Dr. B. W. Hair, *Hamilton, Ohio.*

Send your Name, Post-office, and County, with nearest Express Office, plainly written.

THE MACKINNON PEN.



SECTIONAL VIEW.

An Entirely New Writing Instrument for Desk or Pocket.

Writes seventy-five pages of foolscap with one filling, on any paper, with any clean writing or copying ink.

THE POINT is as smooth as diamond can be polished, is conical in shape, and glides over the paper as easily as a soft lead pencil.

CLEANLINESS.

It **cannot blot** or soil the hands, because ink cannot escape, except in the act of writing, and when not in use the pen is HERMETICALLY SEALED.

DURABILITY, CHEAPNESS.

Report No. 1135 of the Franklin Institute of Philadelphia reads: "The point of the Pen is ACTUALLY A RING OF IRIDIUM (diamond). . . . . It is at once tasteful and useful, and for the service rendered is NOT COSTLY. We cordially approve of the instrument." The *Scientific American* says: "Our daily use of it demonstrates to us that whoever supplies himself with a MacKinnon Pen possesses a good thing."

NOTHING MORE APPROPRIATE AS A

HOLIDAY GIFT

TO A LADY OR GENTLEMAN

☞ Be careful our Name is stamped on every Pen, as there is a Cheap Imitation in the Market.

All who wish to avoid the annoyances of the common writing materials should examine the "MACKINNON PEN" at their stationers, or address the manufacturers,

D. MACKINNON & CO.,
200 Broadway, N. Y.

☞ All persons owning one of our Pens of the first manufacture should send it to us by registered mail, to be made over with all the late improvements, which will be done at manufacturers' price, and warranted for **three years.**

New Operas!

Carmen. Opera by Bizet.....$2.00
Carmen is an Opera that has gradually and surely won its way to a great popularity. Although the book is large, in fact what one might call a "four dollar book" it is got up in elegant style, with music and all the words, English and foreign, for $2.00.

Fatinitza. Opera by Suppe.....$2.00
Splendid new Opera that is a decided success. A large, fine book, with English and foreign words, and the opera in every way complete, for a low price.

Doctor of Alcantara. By Eichberg.....$1.50
A famous opera, now brought, by the popular price, within the reach of all. Orchestral parts $15

Bells of Corneville. By Planquette, (nearly ready).....$1.50
A great success. This, with the "Doctor" and the "Sorcerer" ($1.00) are well worth adopting by companies who have finished Pinafore, (still selling well, for 50 cents) and who are looking out for new and easy operas.

Remember our first-class Singing School and Choir Books, **Voice of Worship** and **The Temple,** each $9.00 per dozen or $1.00 each. Send for copies. Also always remember the **Musical Record,** published weekly. It keeps you well posted as to musical matters, gives 6 or 7 pages of music per week and costs but $2.00 per year!

"THE PRINCE AMONG MAGAZINES."—*N. Y. Observer.*

THE GREATEST LIVING Authors, such as Prof. Max Muller, Rt. Hon. W. E. Gladstone, Jas. A. Froude, Prof. Huxley, R. A. Proctor, Edw. A. Freeman, Prof. Tyndall, Dr. W. B. Carpenter, Frances Power Cobbe, The Duke of Argyll, Wm. Black, Miss Thackeray, Mrs. Mulock-Craik, Geo. MacDonald, Mrs. Oliphant, Jean Ingelow, Thos. Hardy, Matthew Arnold, Henry Kingsley, W. W. Story, Turgenieff, Ruskin, Tennyson, Browning, and many others are represented in the pages of

LITTELL'S LIVING AGE.

In 1880, THE LIVING AGE enters upon its *thirty-seventh* year, admittedly unrivaled and continuously successful. During the year it will furnish to its readers the productions of the most eminent authors, **above-named and many others;** embracing the choicest Serial and short Stories by the **Leading Foreign Novelists,** and an amount

Unapproached by any other Periodical

in the world, of the most valuable Literary and Scientific matter of the day, from the pens of the **foremost Essayists, Scientists, Critics, Discoverers** and **Editors,** representing every department of Knowledge and Progress.

THE LIVING AGE is a *weekly magazine* giving more than

THREE AND A QUARTER THOUSAND

double-column octavo pages of reading-matter yearly. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a *satisfactory completeness attempted by no other publication,* the best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical and Political Information, from the entire body of Foreign Periodical Literature.

The importance of The LIVING AGE to every American reader, as the only satisfactorily fresh and COMPLETE compilation of an indispensable current literature,—*indispensable* because it embraces the productions of

THE ABLEST LIVING WRITERS,
is sufficiently indicated by the following

OPINIONS.

"The last volume of THE LIVING AGE presents a fresh example of the judgment in selection and adaptation to the demands of the best popular literature, which have secured so wide a circulation to that periodical."—*N. Y. Tribune*

"It covers the whole field of literature, and covers it completely, thoroughly and impartially."—*Times, Cincinnati.*

"It affords the best, the cheapest and most convenient means of keeping abreast with the progress of thought in all its phases."—*North American, Phila.*

"It is, by all odds, the best eclectic published."—*Southern Churchman, Richmond.*

"It is the embodiment of the truest and purest literature of the age."—*Am. Ch'n Review, Cincinnati.*

"*With it alone* a reader may fairly keep up with all that is important in the literature, history, politics and science of the day.—*The Methodist, New York.*

"To read it weekly is a liberal education."—*Zion's Herald, Boston.*

"There is no magazine published that gives so general a knowledge of what is going on in the literary world."—*Presbyterian Weekly, Baltimore.*

"Gives the best of all at the price of one."—*New York Independent.*

"It holds the palm against all rivals."—*Commercial, Louisville.*

"There is no other way of procuring the same amount of excellent literature for anything like the same price."—*Boston Advertiser.*

"It supplies a better compendium of current discussion, information and investigation, and gives a greater amount and variety of reading-matter, which it is well worth while to read, than any other publication. . . It is simply indispensable."—*Boston Journal.*

"Ought to find a place in every American home."—*New York Times.*

"There is nothing comparable to it in true value in the whole range of periodical literature."—*Mobile Register.*

Published WEEKLY at $8.00 a year, *free of postage.*

☞ EXTRA OFFER FOR 1880. ☜

To all new subscribers for 1880 will be sent gratis the numbers of 1879 which contain, besides other interesting matter, the first chapters of "HE WHO WILL NOT WHEN HE MAY," a new story by MRS. OLIPHANT, now appearing in THE LIVING AGE from advance sheets.

Club-Prices for the best Home and Foreign Literature.

["Possessed of THE LIVING AGE and one or other of our vivacious American monthlies, a subscriber will find herself *in command of the whole situation.*"—*Phila. Rec'd Bulletin.*]

For $10.50 THE LIVING AGE and *either one* of the American $4 Monthlies (or *Harper's Weekly* or *Bazar*) will be sent for a year, *both post-paid;* or, for $9.50 THE LIVING AGE and the *St. Nicholas,* or *Appleton's Journal.*

Address LITTELL & CO., Boston

Wit and Humor.

CATS have no fixed political belief. They're usually on the fence.

A CINCINNATI constable didn't believe that old Mr. Parvins's gun was loaded, and that's where he was lame. He will lose a leg on account of his skepticism.

"A TRAMP'S Presence of Mind." That is much better—much better. We'd far rather have a tramp's presence of mind than his presence of body.—*Littell's Living Age.*

A YOUNG lady who didn't admire the custom in vogue among her sisters of writing a letter, and then cross-writing it to illegibility, said she would prefer her epistles "without an overskirt."

In one of the American regiments in Mexico there was a corporal who, when the roll was called, refused to answer to the name of "Ebenezer Mead." The officer repeated the call. No answer. "Is Ebenezer Mead on the ground? "Eben Mead is here," quoth the corporal. The "Ebenezer" was repeated again, in a tone like a north-wester. "Captain," quoth the rampant corporal, "your name is Peter Read; would you respond if you were called Peter-sneezer Read?"

The RURAL NEW-YORKER will be sent from now until January 1st, 1881, for $2 00.

The Best way to Cheer Up,

If you are a despondent invalid, is to grow stronger. ou can do it you will take a piece of advice which has the weight of high medical authority to back it That is to use the standard invigorant, Hostetter's Stomach Bitters specially commended and indorsed by physicians. Among the bodily troubles which it overcomes are dyspepsia, irregularity of the bowels, liver complaint, general debility and nervous complaints. It is also found very useful in counteracting a tendency to weakness or disorder of the kidneys and bladder, and persons troubled with rheumatism strongly indorse it as a remedy. Its influence upon the entire system is highly beneficial, promoting as it does the return of sleep and appetite, and the acquisition of flesh and strength. A silent reproof of the folly of nauseous drug medication is conveyed in the success of this pleasant and effective botanical medicine.

TERMS FOR 1879.

THE subscription price of THE RURAL NEW-YORKER is

Single Copy, per Year $2 00
" " Six Months 1 10
Great Britain, Ireland, Australia and Germany, per Year, post-paid $3 04 (12s. 6d.)

Any one sending a club of ten is entitled to one copy, one year, free.

Agents will be supplied with canvassing outfit on application.

No. 1. Mr. Boggles with much pride shows his family the largest carrot he thinks was ever raised.

No. 2. Mrs. B—— is delighted, and suggests that it be pulled and used for their soup to-morrow.

No. 3. It requires all the available muscle in the family to pull it.

No 4. The carrot yields to their united efforts; but, alas! poor Boggles is left a childless widower.

ESTABLISHED 1864. TRADE MARK

C. GILBERT'S STARCHES ARE ABSOLUTELY PURE.

SPECIAL OFFER.—To any one who subscribes now, and sends us $1.75, we will send the Companion free to January 1st., 1880, and give a full year's subscription from that date.

THE YOUTH'S COMPANION

A WEEKLY PAPER FOR YOUNG PEOPLE AND THE FAMILY

1880. Increased in Size. Vol. 53. Elegantly Illustrated.

It aims to be a favorite in every family—looked for eagerly by the young folks, and read with interest by the older. Its purpose is to interest while it amuses; to be judicious, practical, sensible, and to have really permanent worth, while it attracts for the hour.

It is handsomely illustrated by the best artists, and has for its contributors some of the most attractive writers in the country. Among these are

Harriet Beecher Stowe, James T. Fields, E. P. Whipple,
J. T. Trowbridge, Dinah Muloch Craik, Rebecca Harding Davis,
Sarah Winter Kellogg, James Parton, Louisa M. Alcott,
Louise Chandler Moulton, Dr. Henry I. Bowditch, C. A. Stephens.

The variety and worth of its contents will make it a repository of the choicest literature; a library of tales, travels, adventure, history and biography; a "Companion" for the school, the study and the fireside. It will give

Serial Stories, Stories for Girls, Editorials on Current Events,
Stirring Tales of Adventure Two Hundred Short Stories,
Letters of Foreign Travel, Valuable Papers on Health,
Brilliant Sketches, Poems, Anecdotes and Incidents.

Subscription Price, $1 75. Specimen copies sent free. Please mention in what paper you read this advertisement. Address YOUTH'S COMPANION, Boston, Mass.

VICK'S Illustrated FLORAL GUIDE

A beautiful work of 100 Pages, One Colored Flower Plate, and 500 Illustrations, with Descriptions of the best Flowers and Vegetables, and how to grow them. All for a FIVE CENT STAMP. In English or German.

Vick's Seeds are the best in the world. FIVE CENTS for postage will buy the FLORAL GUIDE, telling how to get them.

The Flower and Vegetable Garden, 175 Pages. Six Colored Plates, and many hundred Engravings. For 50 cents in paper covers; $1 in elegant cloth. In German or English.

Vick's Illustrated Monthly Magazine—32 Pages, a Colored Plate in every number and many fine Engravings. Price $1.25 a year. Five Copies for $5.00. Specimen numbers sent for 10 cents; 3 trial copies for 25 cents.

Address JAMES VICK, Rochester, N. Y.

A GOOD SAW MILL For $200.

Our No. 1 Plantation Saw Mill is designed to be run by 8, 10 or 12 horse-power Agricultural Engines. With this power from

1,500 to 4,000 Feet

of lumber can b 'n a day. A product 25 to 50 per cent greater n can be cut with any reciprocating saw mill The mills are complete except saw, and will be put on the cars in Cincinnati for the low price of $200, and warranted in every particular. Saw Mills of all sizes, Engines and Boilers. Shafting, Gearing, etc.

Illustrated circulars sent free.

EGGLESTON'S SENSIBLE TRUSS

THIS NEW ELASTIC TRUSS

Has a Pad differing from all others, is cup shape, with Self-Adjusting Ball in center, adapts itself to all positions of the body, while the Ball in the cup presses back the intestines just as a person would with the Finger. With light pressure the Hernia is held securely day and night, and a radical cure certain. It is easy, durable and cheap. Sent by mail. Circulars free.

EGGLESTON TRUSS CO., Chicago, Ill.

FREE! Before You Subscribe for any Literary paper or magazine for 1880, send for a specimen copy of The Fireside at Home, a mammoth 8-page, 40-column Illustrated Literary and Family Journal—the best and cheapest published. Only 50 cents per year, with choice of sixteen valuable premiums, free to every subscriber. Specimen copy free! Address, F. M. LUPTON, Publisher, 27 Park Place, New York.

THE DEAF HEAR THROUGH THE TEETH!

PERFECTLY, all Ordinary Conversation, Lectures, Concerts, etc., by NEW Channels, to the Nerves of Hearing, by a wonderful New Scientific Invention, THE DENTAPHONE. For remarkable public tests on the Deaf—also on the Deaf and Dumb—See *New York Herald*, Sept. 28, *Christian Standard*, Sept. 27, etc. It displaces all Ear-trumpets. Size of an ordinary Watch. Send for our FREE pamphlet. Address AMERICAN DENTAPHONE CO., 257 Vine St., Cincinnati, Ohio

I. X. L. Feed Mill

ALL IRON BUT THE HOPPER

Cheap, Effective and Durable.

CAN BE RUN BY ANY POWER.

Capacity from 5 to 30 bushels per hour, according to size. Send for Catalogue "B," &c.

U. S. WIND ENGINE & PUMP CO.,
Batavia, Kane Co., Ill.

New and Best Book on Building

Palliser's Model Homes. Profusely illustrated, pretty homes, full information on Building. Price $1 postpaid. Address the publishers, PALLISER, PALLISER & CO., Architects, Bridgeport, Conn. For sale by all Booksellers.

TEAS. AHEAD ALL THE TIME. The very best fresh goods direct from the *importers* at *half* the usual cost. Best plan to Club Agents and large buyers. All express charges paid. Quality guaranteed. New terms free.

THE GREAT AMERICAN TEA CO.
P. O. Box 4235. 31 and 33 Vesey St., N. Y.

Monarch Corn and Cob Mill.

WARRANTED

Superior to any in use for all purposes. Will grind faster, run lighter and wear longer than any other.

CORN SHELLERS and FEED CUTTERS all sizes. Send for Circulars

WHITMAN AG'L CO.,

The Vineyard.

THE DUCHESS GRAPE.

J. T. LOVETT.

EVER since the introduction of the Concord, grape growers have been seeking for a grape possessing all its merits—with perchance some of its demerits—and *white* or amber in color; as it has long been known that white grapes meet a more ready sale and command better prices in market than those of any other color. When the Martha was produced, the venders of the vines shouted "*Eureka*" and called it "*White* Concord;" but time has proven that while it possesses the very important points of vigor and hardiness of vine, early maturity and certainty of a crop, it is quite too crude and foxy to ever be considered a first-class grape. Many years passed and many varieties were produced almost all of which quickly passed into oblivion, until the public was given the Lady. This grape most surely surpasses by far any of its predecessors, being a pure seedling of the Concord and possessing the sterling qualities of its parent, with the additions of ripening very early and being less harsh. In the opinion of the writer, this may be regarded as a really *good* grape, and is justly entitled to the extended sale and warm welcome it has received through the country: but, alas! it, too, has a failing—it is found to be a poor keeper. For home use, it is undoubtedly the best white grape yet introduced for general planting.

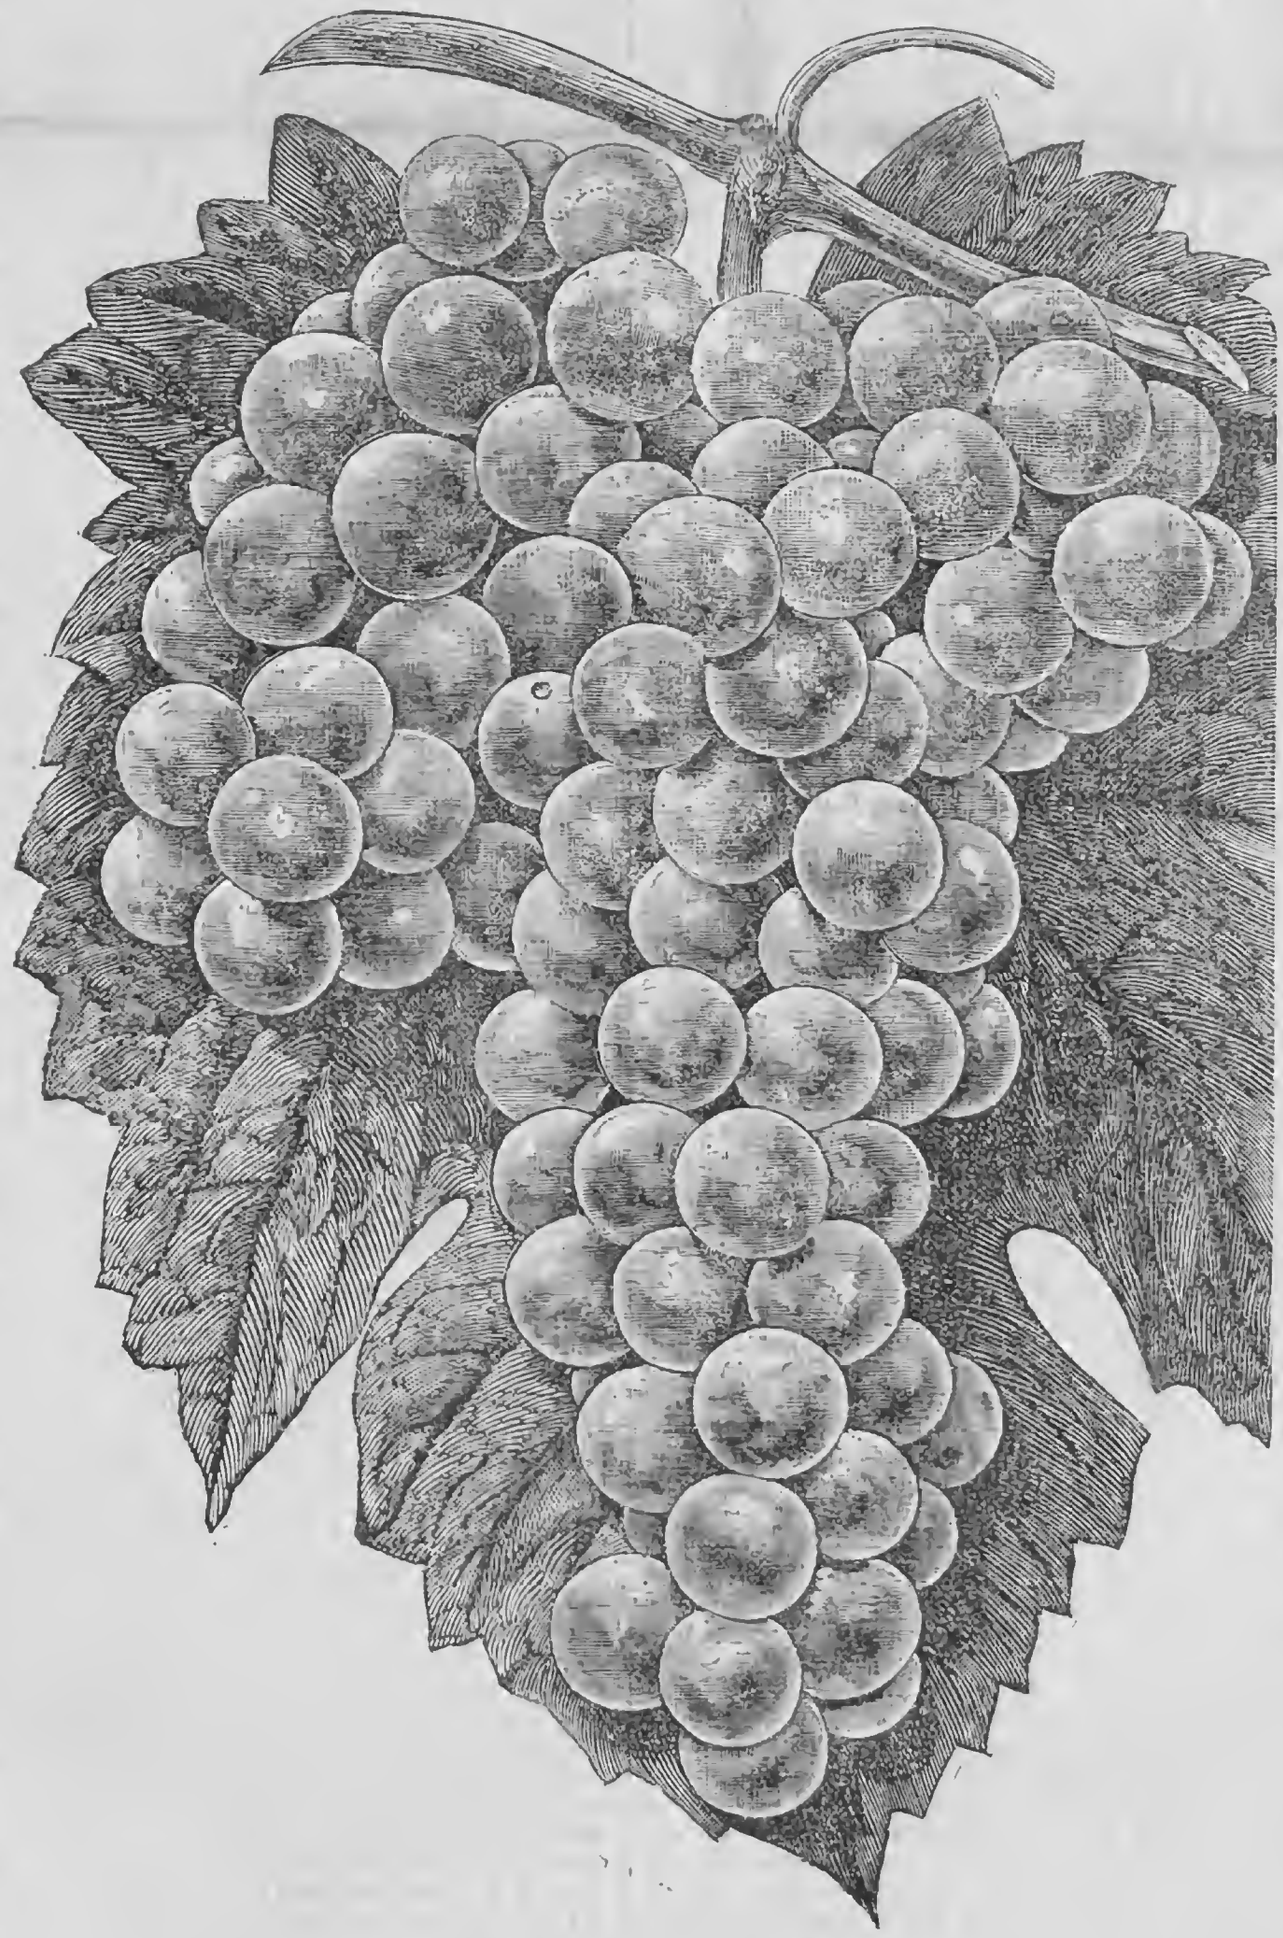
Now comes the Duchess, which is believed to possess more merits and those of a higher quality than any other white grape. It is a seedling from a seedling of the Concord, crossed with one of the hybrids—Walter I think—and, what is unusual, it has been tested for ten years before being offered for sale, and that, too, in many and widely separated parts of the country. From this thorough trial, extending from the north to the south, it has been proved to be of general adaptability, to possess equal hardiness of vine, and that both vine and fruit are exempt from mildew and other diseases and the depredations of insects to the same marked degree as the "old reliable" Concord, with even greater productiveness and growth of vine. The berries are greenish-white, round, medium to small and possess the valuable properties of being one-seeded and clinging to the stems so firmly as to remain on the vine until winter, if left ungathered. Bunch good-sized to large — selected clusters measuring eight inches in length and weighing a pound—compact, long, quite often shouldered, as shown in the engraving, and decidedly handsome.

The reliability of the vine, together with the size and beauty of its fruit, would be sufficient to warrant the dissemination of this grape, even were it of but ordinary quality; but its excellence in this particular is one of its leading merits; for among all hardy grapes of any color whatsoever, I know of none so refined. The skin is thin and free from the acidity so common with American grapes: flesh tender, without pulp, surpassingly rich, sweet, and sprightly, free from foxiness, with no unpleasant taste at the center, and breaking like the foreign grapes. I can best state its superior quality by stating that the Committee on New Native Fruits, of the American Pomological Society, at the recent meeting held at Rochester, awarded the Duchess the palm of superiority of flavor over all others, including many of the new white grapes of recent origin, namely, Poeklington, Niagara, Noah, Prentiss, etc. Duchess, however, cannot be regarded as an early grape, ripening as it does with, or a little later than, the Concord; but what grape growers will be most pleased to hear—and on which most of its permanency and popularity must rest—it is said to be one of the best of keepers, and—what seems strange for a thin-skinned grape, yet is assured us true—it is an excellent shipping sort.

In conclusion, I would state that, after a somewhat close scrutiny of the Duchess for some years, from its "combination of excellencies" and freedom from defects I esteem it a variety well worthy the attention of both the amateur and professional grower of this popular fruit.

Little Silver, N. J.

DUCHESS.—Berries of medium size, light green. The skin is thin and the flesh, as in foreign sorts, adheres to the flesh, so that one is tempted to eat skin and all. It is semi-transparent; clings to the peduncle firmly; is sweet and yet sprightly enough to be very pleasant. The bunch is shouldered and compact. At this time the bunches sent to us by Messrs. Farley & Anderson, are as sound as if lately picked from the vines. No doubt the Duchess is a good keeper and carries well.



THE DUCHESS GRAPE.

Farm Topics.

NOTES FROM THE RURAL GROUNDS.

Germination of Seeds.

QUITE a number of our friends have written us that some kinds of the seeds we have sent them did not grow. Others have written that all of the kinds grew. The difference, therefore, has been owing to different treatment. Seeds of hardy plants are generally slow to germinate. Clematis seeds, for instance, sometimes require a year or more. But by special treatment, the germinating period of all sorts of seed can be hastened.

In our last seed distribution, Hibiscus Moschentos (Marsh Mallow) was one of the kinds offered. Two months ago we planted 40 seeds in a pot. They began to germinate not until the seventh week. Five days ago we planted about the same number in another pot of the same size. Three of them have already germinated, and, no doubt, the others will make their appearance in a few days. The first lot was treated in the usual way; the second on the plan of a

Miniature Hot-bed.

A flower-pot, eight inches in diameter, was filled one-third full of coarse gravel or pebbles, finishing with finer gravel or coarse sand. Then it was filled to the brim with a mixture of leaf-mold (decayed leaves), old manure and sand in about equal proportions, all pressed through a fine sieve. This was made moderately firm, and the seeds were pressed down an eighth of an inch and covered. The pot was then plunged in a pan of hot (not quite boiling) water, and there left until the surface soil was wet, and then placed upon a stone mantel over the kitchen range. The pot was then nearly covered with a pane of glass, a half-inch space being left for ventilation. Simple as is this contrivance, it furnishes every advantage of a hot-bed of the carefullest construction, the stone slab which is always hot, supplying the bottom heat which in a hot-bed is supplied by the fermenting manure. We advise our friends to try this "epitome" hot-bed. Grass or common seeds of any kind may be used at first to experiment with.

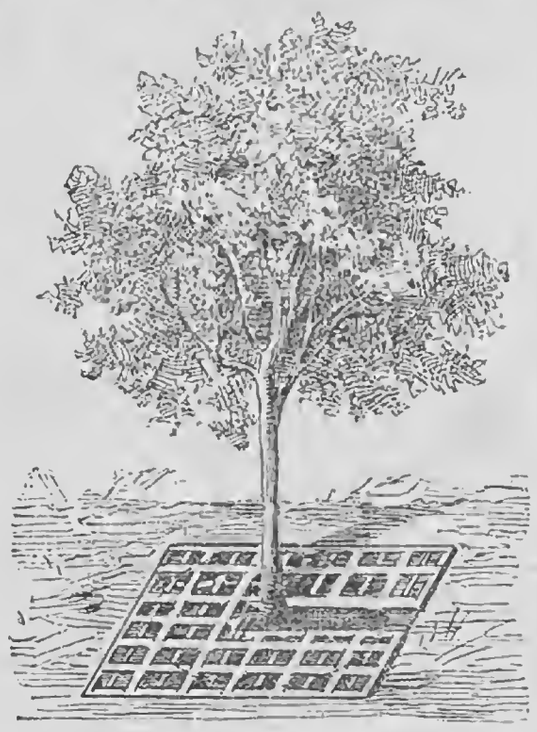
The "California" and Other Privets.

"A friend in need is a friend indeed." The present storm, Nov. 20, has scattered the Autumn leaves, and the trees are as bare as in mid-winter. It is now that one prizes evergreens and such deciduous trees and shrubs as hold their foliage late. Of the latter we may mention the "California" Privet, which is still as green as at any other time of the year, and it will so remain for quite another month. If this shrub is annually cut back, it forms, in so far as foliage and shapeliness can make it so, a very handsome plant; for its flowers, though resembling those of the white Lilac, are borne in smaller panicles, while there are fewer of them. One learns to prize such shrubs as of real value when he finds they remain fresh and green for a long time after other deciduous plants have lost every vestige of foliage. The botanical name of this is Ligustrum lucidum—by some, L. ovalifolium. It is probably a variety of L. Japonicum, which, though it bears larger and thicker leaves, is not hardy here. The common Privet, L. vulgare, is everywhere well known, but for ornament it is not to be compared with the "California" Privet. We call it by this name for no better reason than that it is so named in many of our nurserymen's catalogues. Among varieties of the common Privet are the Variegated and Weeping. The first is really fine, the leaves being pretty well divided between cream-color and green, and, when young, suffused with a delicate pink. The second is a lawless thing that can send out shoots in more directions than any other plant we know of.

Orchards in Hen-yards.

Will plum trees ripen plums in hen-yards?

Some say yes—some no. One can find out by trying, which is the thing we propose to do. Horticultural experiments, many of them at least, require a world of patience and industry. And then, after all, the results may be told in a word or so, which does not, by any means, *pay* the *editor*, who must fill his columns weekly. No doubt the pages of the RURAL alone would more than suffice to chronicle the results of all the horticultural experiments which are being tried in every part of the world. We have often thought that, if the members of horticultural societies were as fond of making and recording experiments as they are of reading essays, their "Transactions" would prove more instructive to all hands, while the secretaries would find their tasks greatly lightened.



The area of our new hen-yard is about 25 x 300 feet. Of Pears and Apples we have planted dwarfs only, viz., of Pears: four Duchess, four Seckel, six Louise Bonne, four Tyson, four Howell, six Bearré d'Anjon, and four Lawrence. Of Apples (all on Paradise stock), one each of Baldwin, Gravenstein, Hub. Nonsuch, and Red Astrachan. These we have already planted. The Plums, owing to the lateness of the season, we concluded to leave until spring, the holes and soil being already prepared for them. In order to prevent the fowls from scratching the earth over the roots, we made for each tree a lath frame, as shown in the sketch, first covering the ground with salt hay. These frames may be tacked together in a few minutes. An opening may be left as shown in the figure, so that they can be removed when digging or cultivating about the tree is deemed needful; or a perfectly square frame may be made, in which case the frame can be tilted up during cultivation. Five years hence, life spared, we may tell our readers to what extent fowls are helpful in keeping down curculios, codling moths, bark lice, etc., etc. It is *something* to look forward to, kind readers.

FARM WORK FOR DECEMBER.

PROFESSOR W. J. BEAL.

Attending Society Meetings.

THERE are granges, clubs, and institutes to attend. There are special conventions of various kinds for the purpose of considering some breed of cattle, the dairy interest, horses, sheep, swine or poultry. These must not be neglected. Before going, the farmer may think it will not pay to attend, and hunt up various reasons for not doing so or taking an active part, yet, if he ignores these obstacles and joins in the work, he will fill his head and notebook with new ideas which he will wish to try next year. Besides learning something and keeping up with the times, a farmer is likely to return from such a convention thinking more of himself and his brother farmers, with broader and higher views, and with more enthusiasm for his occupation. Do not forget or neglect these gatherings for improvement. They will not interfere with the rest which is so much liked in the winter months. Man was not made like a coon, a bear or a mud-turtle to hibernate in the coldest of the year.

Have Things Handy.

At this season of the year in the Northern States, the chief occupation of the farmer is to "do the chores." If former hints have been heeded, some attention has been given to making every thing as convenient as possible. Labor is costly; time is money. The barns, doors, sheds, pig-pens etc., should be arranged inside and out to save needless steps, and lifting of materials. Study to save labor in keeping the stables in good order and in supplying the water. It would naturally seem to be a loss of labor to omit digging a well, and drive the cattle all winter to some stream or to a "cat-hole" where the ice must be frequently cut and the filthy water dipped up by hand for the stock to drink. A good spring or a rapid brook near by is a great convenience; but its place may be well supplied with a windmill. The worst arrangement is a shallow pond where the cattle tread up the mud and spoil the water with their droppings. If water can come fresh from a well, spring or cistern where it is several degrees above freezing, it is much better for all kinds of stock. Cattle are like human beings—a little inclined to be lazy. They will often stand about the yard and suffer for hours instead of venturing out in the cold wind or rain through an unbeaten track for a drink in a distant brook.

Roots and Oil-meal.

It is a great change for cattle or sheep to go from the pasture where they get green food and plenty of exercise, to a stable or yard where they are deprived of both. Dry food—hay, oats, corn and meal—produce costiveness. The hair shows it; the animal is uneasy and not likely to be thrifty. As a sanitary measure, people eat coarse food, apples, berries and other fruits. Their value cannot be measured by the amount of fat or nitrogen or starch they contain. Just so with green food for all sorts of stock, even to poultry. This is the chief value of mangels, rutabagas, carrots and potatoes for domestic animals. Roots in winter keep the bowels loose; they prevent a too sudden change from green to dry food. Oil meal fed in small quantities, is a very good substitute for roots. I quote an idea to the point from the National Live Stock Journal.

"Every dairyman, so far as he can, should supply himself with a pint of oil meal for each cow per day, or a half pint of flax seed, which should be boiled to jelly and given with her other food. Oil-meal is worth all it costs for food, besides being a most excellent preventive of disease. We have never had any trouble with cows at calving when fed a small quantity of oil-meal during winter. The small quantity of oil left in it seems to perform the same office as a little grass or carrots and beets would to cleanse the bowels." For a similar purpose I know of some prominent men who use linseed in some form or other for their sheep in winter.

Improve the Stock.

For about half the year we have to fodder cattle and sheep. Shall they grow while young steadily all the time till they are mature? Or, shall they be fed and sheltered by a straw stack or a rail fence just enough to hold them in place during winter and let them do all their growing during a part of the warm months? As the country grows older, competition becomes greater in everything. It requires better management to make money. Poor stock, poorly managed, cost more than it will bring. Within a few years the prices of choice animals have declined, till they are within the reach of every man who keeps stock. Now is a good time to select a good, well bred bull for use next season or later. The prices will be lower now than in the spring when such animals are most salable. A thoroughbred male, of course, pays his way when used with pure-blooded females; but in a still more marked degree does he pay his way when used with grade or common stock. These are points which are well established beyond controversy.

Industrial Topics.

EMBELLISHMENT OF COUNTRY SCHOOL GROUNDS.

CHAS. W. GARFIELD, SEC'Y, ETC.

AT the winter meeting of the Michigan State Pomological Society, a very suggestive essay upon "The Improvement of Country School Grounds" was presented by W. C. Latta, of Mason. The discussion which followed awakened in me a desire to carry on the discussion farther, and, if possible, get at some practical method of accomplishing some work in the matter. It is a great deal easier to write essays, deliver addresses and talk fluently in conversation upon this topic than it is to actually grapple with the difficulties to be overcome, and to carry out some plan that shall really awaken in school patrons a practical interest in the work, that will bear fruit in making the places where country children attend school, better than the average farmer's barn.

In traveling over Michigan it is very rare to find a school-house situated upon a piece of ground larger than a quarter of an acre, and it is still more rare to find a single example of neatness and taste in the interior and exterior arrangements. We pass over the State by highway or railway, and when we find a neighborhood of tasty houses with good out-buildings, we know it is a thrifty community; the land is good and the right kind of farming has made an independent, thrifty people. Should we, by some strange dispensation in our travels, pass by a school-house built in good taste, nicely arranged in its appointments, having neat out-houses and a yard deftly planted to trees, shrubs and vines, with a beautiful lawn as a foundation, we should, with reason, remark: "This neighborhood takes an interest in education. The people have broad views of what school training should do for their children, and they evidently believe that the richest inheritance they can give their boys and girls, is an education acquired under the tuition of pleasant associations as well as good instructors."

But, if we judge of the interest that Michigan people have in the best and purest education that can be given their children, by the appearance of the places where the business of giving that education is carried on, what must be our judgment! Can it be doubtful that this is a proper gauge to measure by? We judge the tree by the fruit which it bears. We judge the man by the company he keeps. We say that the books one reads are his associates and friends and have as much to do with the molding of his character as have the people with whom he associates and converses. We say, too, in speaking of the home, that the lives of people are influenced very largely by the surroundings and associations of childhood's home. We believe these to be facts. Why do we not apply them to the places that stand next to our homes in influencing the minds and hearts of children? These are at school over half of their waking hours. They go there for the avowed purpose of learning. They go from homes provided with music, pictures and all sorts of beautiful things, to a bare, often untidy, unpleasant school-room, and a majority of them don't like to go there, and their parents wonder why it is their children are so anxious to do anything rather than attend school.

The school-house should be the center of attraction in every country district. It should be a model in its inner arrangements and outward embellishments. We have now to deal more particularly with the latter, because these come within the realm of horticulture. In the same way that a museum of specimens is collected for instruction within-doors, there should be a collection of trees and plants about the house. Pupils should be made familiar with the growth of plants, shrubs, and trees by immediate and constant contact with them at school, and they will become especially interested in any that are placed under their care and protection. The idea that the school grounds are simply a romping place is erroneous. There is nearly as much to be learned in the yard as in the house from May until October, and the material brought into the yard should be protected as carefully as maps, charts, globes, etc., in-doors.

The first and greatest objection that will be made by the majority to the use of the school yard for purposes of instruction, is that the children must have a place to run and play games without the danger of continually injuring something. They must have fun, and he cannot appreciate the necessities of childhood who would so hedge about its sports as to take all the activity from them. This objection is easily met by the assurance that it is in the power of any teacher of gumption to originate and assist in maintaining such sports as will in no way conflict with the growing of plants, shrubs and trees, and even annual flowers in the school-yard. Because boys desire to play "long-ball" or "ante over" is no argument in favor of doing without windows in the school-room. If these games break window lights, there must be a substitution of a less objectionable game. Some one has suggested that the school grounds should be beautifully planted and everything placed in the best of order before the children are allowed there, and then, when school opens, the mandate should go forth that everything in the yard is for purposes of instruction, and must be used as globes and maps are used, and cared for in the same manner.

This is wrong in principle and policy. It were better to begin with bare school-house and grounds, and let every addition be made by the pupils under the judicious guidance of the teacher. Each scholar should feel an interest and pride in the development of the work; and this state of feeling can only be brought about by having their hands do the work. Just so soon as the pupils appreciate the fact that they are partners in the possession of each added tree or vine, a detective force is at once formed for the preservation of the property. But just so long as the feeling is engendered that the school-house and grounds are district property, with no responsibility, save in a Board of Trustees, there will be constant difficulty in maintaining the property in presentable condition.

Again, aside from the use of the appointments of the school yard as means of giving instruction in the names and habits of plants, the school premises should be a model for the neighboring homes, and, if proper attention is given to the matter, this will be the case without any endeavor to make it such. The work done in the school yard will be the inducement to work at home, and there is no doubt that in a decade, wondrous changes might be worked throughout the country in the ornamentation of the exteriors of our homes, if the work could only be started about the school-houses. It is said that public opinion must be manufactured before anything can be done of worth in the ornamentation of school-yards; but may not the work done by the aid of pupils, under the direction of the teacher, be the manufacturer of the public opinion?

The expense in ornamenting school grounds should be nothing in cash. The work should be all a donation, and the plants and trees should be from the woods near at hand, or from the gardens of the patrons, and the teacher who will not take hold of a work like this as earnestly as of the teaching of geography and grammar, lacks an important element the possession of which should aid him in securing a certificate. The subject is one of grave importance to our country people and worthy of an important place in our family papers. Papers like the RURAL, that are received as members of so many households, can by giving space to a discussion of this topic, so awaken thought regarding it that people will see that something ought to be done. I confess that the teachers should initiate the work, but the people should support them cordially in any efforts like those suggested above.

Grand Rapids, Mich.

Sheep Husbandry.

WHAT SHALL BE DONE WITH THE SHEEP?

JONATHAN TALCOT.

TO-DAY the snow is falling steadily and as wet as rain, although it does not melt quite as fast as it comes. In the RURAL NEW-YORKER for October 25, page 686, Col. F. D. Curtis says: "The flock should never be exposed to the storms of autumn, winter or the early spring. Such exposure will surely enfeeble the constitution of the sheep, and so wash the wool and the skin that, instead of the fleece being soft and lustrous, it will be harsh and dingy." The Colonel gives other reasons why sheep should be housed from the storms of autumn, winter and early spring, that to me are conclusive, and which every owner of a sheep in this latitude should heed, not only for the welfare of the sheep, but for the extra profit that will arise to the owners of all flocks thus cared for. While the writer concurs in the statements made by Mr. Curtis in regard to the need of protection for flocks from the storms of fall, winter and spring, and thinks the problem at the head of this letter fully answered in his own mind, others may be in doubt as regards the necessity of sheltering their flocks in such weather, thinking that they will be more hardy if permitted to "rough it," or seek shelter where they can best find it, if, indeed, they can find any at all.

For instance, in the RURAL of November 8, page 723, "G. G." says: "I think that Colonel Curtis, in his article on the proper care of long-wooled sheep, in the RURAL of October 25, has exaggerated a trifle with regard to the necessity of sheltering them," etc. G. G. tells us where he was born, and gives some of his experiences in early life, but he gives no argument to prove that the sheep, even on his native hills, would not have been better off for housing in cold, wet storms; which, no doubt, they would have been. G. G., in conclusion, says: "In the Northern States, however, I concede that sheep require winter shelter." If sheep require winter shelter, they certainly do fall and spring shelter, as our storms of fall and spring are much more trying to animals than those during the winter.

If I understand Colonel Curtis aright, it is during the rain storms of fall and early spring that sheep should be more particularly cared for and kept dry. A sheep with a dry fleece can, if well fed, stand the cold of winter as well as any animal on the farm; it is only the sheep that has a wet fleece on its back that is suffering from such exposure, and all such sheep suffer more or less whether they are long-wools or short-wools, only the former varieties suffer most, from the fact that their wool is more open, and therefore they are more susceptible of getting wet through to the skin more quickly than the short-wooled sorts, whose fleece is denser.

In the early life of the writer, sheep were not cared for as many good farmers now care for their flocks, and an open shed, under which they could go at will, was then considered all that the sheep needed. And if they would go under their sheds in all inclement seasons, that arrangement would do very well, but it unluckily happens that they will not do so always when it rains, so that they are liable to get wet and take colds from their exposure. The only safe measure, therefore, is to furnish a place where they can be shut in out of the storms of fall, winter and spring.

For the benefit of some new beginner, I will give my method of caring for the few sheep I have on the farm, and the reason therefor:—

In the open-shed method of my boyhood s days, more or less sheep were lost during winter and spring by negligence on the part of the flock-master—as I now think—in not properly caring for his flock; and my own early experience was like that of my neighbors who miscared for their flocks in this way. After a short experience of such mishaps, however, hoping to improve my flock, and thereby my own means, I used for their benefit a part of an old cow-house, by boarding it up and putting in racks and mangers for their use, and in that place they were kept and fed during the winter on all stormy days and also during the nights. This improvised stable was well ventilated, and as a result of its protection, the sheep came out fit for the butcher in the spring, having been fed a light ration of corn, or corn and oats, daily. In view of the lesson then learned, from that time to the present I have considered protection from all storms in fall, winter and spring to be one of the requisites of good sheep husbandry, and that sheep so housed and fed will pay as well for such care and feed as any other farm stock—and I think even better. By the old method of treatment very many lambs were lost in the spring, that might have been saved had the sheep had proper care and feed during the winter previous. My present method is to house my sheep from all storms in fall, winter and spring; to feed a daily ration of grain from the time the animals go into winter-quarters till they are again accustomed to the grass in the spring—grass that has sufficient nutriment in it to keep them gaining. I have now in my flock sheep that reared twins last winter and spring, and I think them fatter than most fat sheep that go to the butcher. The lambs were sold for early market lambs.

Many farmers are afraid to have their sheep get too fat, some saying that a fat sheep is not good to breed from, and that if a sheep once gets fat it should be sold to the butcher, as it will never get so fat again. From actual experience I know that this theory is unsound. In my flock the ram is allowed to run with the sheep, and the lambs come early. Having a warm place for my sheep, I have been very successful with them and their lambs ever since I adopted the rule to keep them out of all storms in fall, winter and spring, and to feed daily to each a small ration of corn, or corn and oats mixed; say, from one gill to begin with, to half a pint or more when once established in their winter-quarters. My sheep are Cotswold and Merino, and these I think as profitable a sort as the common farmer can have for mutton and wool combined.

If, impelled by the results of any actual experience related briefly in this letter, any flock-owner, in deciding the question asked at the head of it, shall come to the conclusion to give his sheep protection from all storms in fall, winter and spring, and to give them liberal feeding, if they have not had it before, I am fully convinced, from my own experience, that he will not again return to the old practice of letting his sheep seek their own shelter wherever they can find a semblance of it; nor will he stint them in their rations enough to prevent them from always being in a thriving condition.

The Swine-Herd.

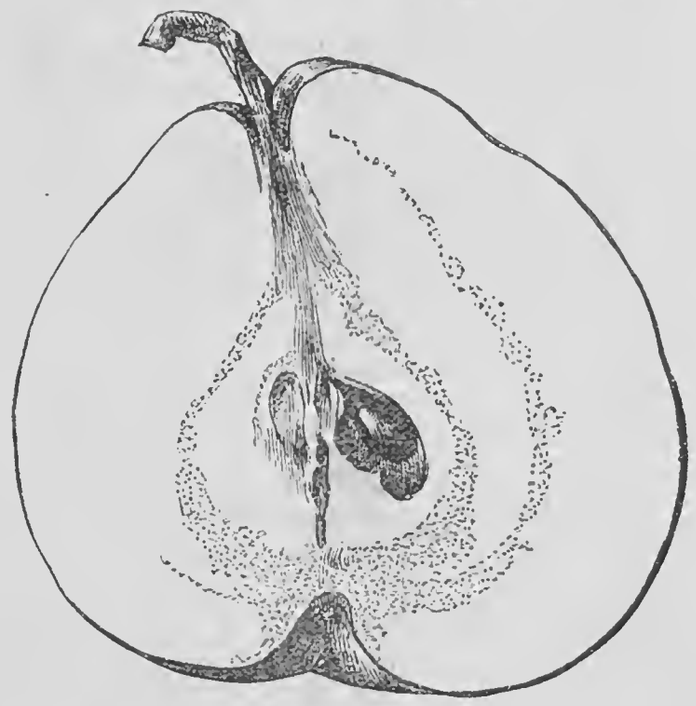
HISTORY OF SWINE—THE NATIONAL CONVENTION.

COL. F. D. CURTIS.

PREVIOUS to 1872 there was no established standard of characteristics for the different breeds and families of American swine. Different breeders had standards of their own, or else bred pigs without any standard, and the same breeds, identical in most respects, were known by different names: thus, the hogs now known as the Poland China were called the Magic, (M. Magie being a leading breeder of them), and also as the Butler County, Warren County, Big China and Poland China. Chester White Hogs were bred with lop ears and straight ears. Hogs of all forms were called Cheshire, and grade pigs of English breeds were sold as thoroughbreds.

For some years a necessity for a better order of things, both in swine literature and in the breeding of swine, had been discussed; but the matter did not take any definite form until the writer of this article read an address before the Farmers' Club of the American Institute in New York, setting forth the importance of action in establishing, in an authoritative manner, the origin, history, and characteristics of the different breeds of swine in America, urging that a national convention be called of the swine breeders of America and Canada, to settle all of these questions and to take such other action as they might deem best. The resolution was adopted and such a convention was called to meet at the Cooper Institute, New York, May 14, 1872. The time which intervened between the call and the day selected, proved to be too short, and so little opportunity was given for making known the objects of the convention that when it assembled, it was found that there was no representation from the West, where there was the largest pecuniary interest connected with swine.

The convention, therefore, in order to secure an active co-operation from swine breeders generally, and especially in the West, decided



WINTER NELIS—SECTION.

to adjourn to a more central point and to appoint a committee to make all needful arrangements, both in regard to time and place. The new committee consisted of F. D. Curtis, M. C. Weld, Henry Stewart and L. A. Chase. This committee chose Chas. D. Bragdon, of the RURAL NEW-YORKER, as secretary, and selected Indianapolis, Ind., as the suitable place for the next convention, and the time November 20, 1872. This committee were also instructed to designate the order of representation for the delegates to the next convention which, they decided should consist of one delegate at large from each State, and one delegate from each State for each breed of swine raised therein. These delegates were to be selected by the swine breeders' associations where there were any such, or by the proper officers or members of the State Agricultural Societies, or State Boards in connection with the swine breeders of the respective States. Great pains were taken to secure a full and just representation of this great interest from the whole country. The committee also were empowered to select a committee to compare reports upon the history, characteristics and a scale of points of the different breeds and families of swine, and upon the question, "What constitutes thoroughbred swine?"

The committees upon the different breeds were selected from names furnished and recommended by prominent swine breeders, in the different States and Canada. In most instances, the committee thus selected, forwarded reports to the Indianapolis convention, and where they failed to do so, that convention selected other committees to perform the work. Alexander Heron, Secretary of State Board of Agriculture of Indiana, at Indianapolis, was requested to receive the various reports prior to the convention, and to make the necessary arrangements, which services he faithfully performed. As the convention was to be a delegated and also a legislative body, the committee, in their circular announcing their programme, and the committees on breeds urged the swine breeders to select the most intelligent and impartial ones of their number to attend the convention, and thus help to inaugurate a new era in the breeding and improvement of swine.

When the convention met it was found that nearly all of the committees had prepared full and complete reports, which, with some modifications, were adopted, and the action of this convention, so fully and fairly represented, has been accepted as conclusive, and has become authority on the questions and histories involved.

The Poultry Yard.

ORIGIN OF DOMESTIC POULTRY.

HENRY HALES.

NOT much need be said of the ancient history of poultry; enough is well known to show that the Egyptians, Greeks, Romans, and all the earliest nations were acquainted with and kept poultry, even when their superstition or religion forbade the eating of them, as it is said of the ancient Britons. In early pictures of poultry, many of the peculiarities of our modern breeds are seen both as to colors, top-knots, shapes and sizes.

It is only within the last, comparatively, few years that fowls have received a share of the attention that had for a long time previously been given to the improvement of other live stock. Since then, however, careful breeders have developed the original sports, or variations, into what are now known as distinct breeds. The great change brought about within the memory of the present generation, is enough to show that much more may have been done during past ages by food, climate, local in-breeding, or selection by the caprice of man.

How often has the question been discussed concerning the plurality or singularity of the origin of our domestic animals, including poultry. Some will say of the stately Dorking or Brahma, "Is it possible that such monstrous birds can claim the same ancestry as the diminutive Bantam? Or, can the heavy, trousered Cochin claim the same parentage as the neat, clean, close-feathered Game, or as the Silky, with its odd covering and dark skin?" To answer this question, let us look a little further into the laws of nature, as we observe them. Every species of birds or animals has its peculiar voice, song, call or cry, that distinguishes it from all other species. There is no mingling or jumbling together of sounds. This is strikingly shown in all the feathered kingdom. The voice of every little bird is wholly its own Among the few small birds that visit both the American Continent and Europe from the far north, such as the Snow Bunting and Lesser Redpole, the rolling note of the former is precisely the same, whether heard in New Jersey, Scotland, or Siberia.

With poultry it is just the same. I have listened to the notes of fowls from India, China, Japan, Spain, and Italy: all cluck just alike to their chicks; call them by one note; give the same notes of alarm, prate the same, and all give the same crowning crow. Although bred apart for so many ages that no one can even guess the time when they first sprung from a common source, yet their notes are precisely identical, varying only with the size of the fowls—the larger the bird, the longer and more sonorous the crow. There are some slight variations to the rule, as some breeds are more inclined to deeper tones than others, and active breeds are more noisy than the more sedate sorts. Yet size is the controlling rule—the larger the Asiatics are bred, the longer their crow, this getting shorter till we come to the quick, shrill crow of the Bantam. Some song birds have the power of imitation so as to change their songs; our canaries can be taught other birds' notes. Their natural "call," however, is always the same. This would seem to show that all poultry have the same common origin, all descending from one species. If thousands of years of separation, all kinds of climates, food and breeding, do not change their notes, does it not seem to point to such a single original source?

In accounts given by many naturalists, only one wild species is known that has the crow of the domestic cock, namely the Gallus Bankiva. It has a wide territorial distribution, from the Himalayas to Burmah, the Malay Peninsula, India, China, and the Phillipine Islands. Mr. Darwin, in his "Variation of Animals and Plants under Domestication," says: "This species varies considerably in the wild state," and goes on to show various colors observed in different countries, especially in the hackle; but these mostly resemble the colors of the Black-breasted Red Game; and it is well known to breeders that all our varieties of fowls of this color have single combs, except Pea-combed Partridge Cochins. There are several other wild species of fowls, but with characteristics further removed from the domestic fowls, and with different voices. These produce only "mules," when crossed with the tame fowls, while Gallus Bankiva breeds freely with them, and little difference can be distinguished between them and the Games as ordinarily bred.

While most naturalists in India settle on Gallus Bankiva as the parent of the Game fowls, and, perhaps, of all our domestic breeds, yet sufficient force is not given to the underlying *voice* in deciding this question. As I have before said, if *one voice* is the property of only *one species*, as we notice in other birds, then all fowls are descended from one origin.

Pomological.

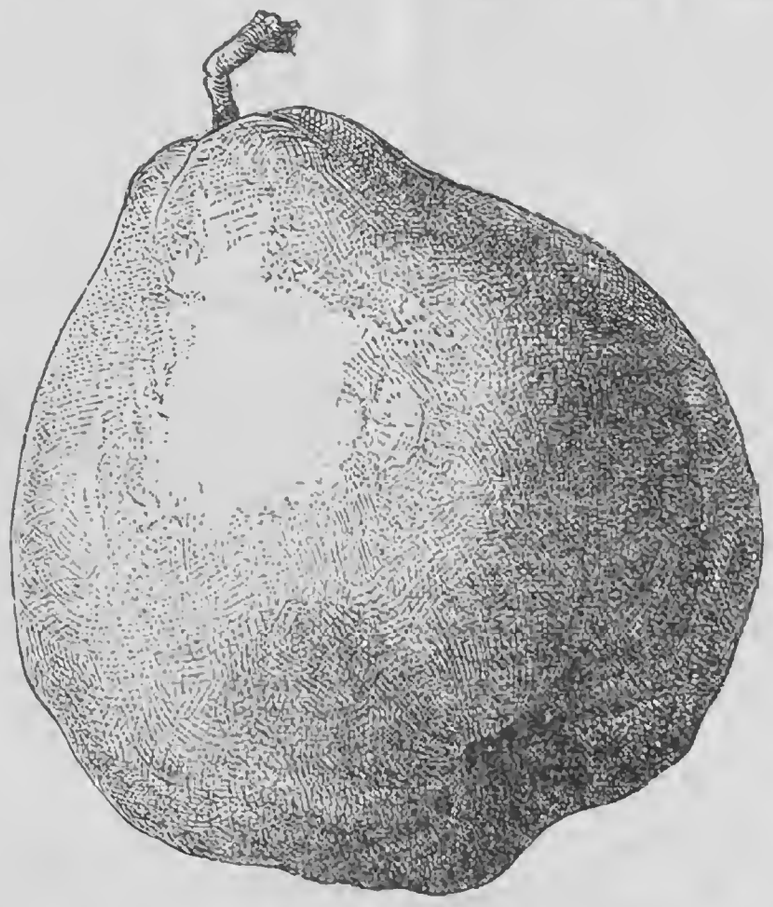
WINTER NELIS PEAR.

CONTINUING our sketches from nature of the best fruits in cultivation, we now present the Winter Nelis pear. In 1832 it was spoken of in the Pomological Magazine as follows:—

"An excellent winter pear, in perfection in December and January, originally raised by M. Nelis of Mecklin (Belgium) in honor of whom it was named. It bears pretty well; the fruit is of high quality, and is expected to become a favorite of the dessert. Skin yellowish, sometimes nearly covered with russet-brown; flesh yellowish, melting, buttery, juicy, very rich and high flavored."

Mr. Thomas's description of this fine pear (see American Fruit Culturist, p. 291) in 1875, does not differ materially from the above. He says: "Flesh yellowish-white, fine-grained, buttery, very melting, rich, sweet or slightly vinous, perfumed, aromatic, with an excellent flavor."

According to the best information we can gather, Winter Nelis thrives best in the following States: New York, Michigan, Pennsylvania, Ohio, Kentucky, Tennessee, California, and moderately well in New Hampshire, Vermont, Massachusetts, Connecticut, Ontario, Wisconsin, Oregon, Maryland, Virginia, Indiana, Illinois, Missouri, Utah, South Carolina, Georgia, Arkansas, Mississippi and Louisiana. It is to-day ranked as one of our very best winter pears for family use. It is of medium size as shown in the engraving of a half section. The tree is of straggling growth and with us the top of the branches bend over at least 25 degrees towards the north. We know nothing of this fruit from experience, our only tree having borne the past season for the first. The pears were small and failed to ripen. We do not learn that it succeeds anywhere in New Jersey that these comments will not influence persons



WINTER NELIS PEAR.

living in the States enumerated above, especially as it does not usually do well until it has acquired some age.

SALT FOR PEAR BLIGHT.

Not long ago I saw an inquiry in the Rural about salt for pear blight, and again in the issue of November 15, Gen. Noble asks the experience on this head, of inland growers. To this class I belong, having an orchard of 3,500 trees of different ages—all Duchesse. My neighbors say it is one of the finest orchards they ever saw, and Mr. Moody says it is the best his eyes ever fell upon. The land is a rather strong clayey loam, sloping to the south; not very dry, although no stagnant water is either on or in the soil at any time. I plow towards the trees once a year, and use the cultivator the remainder of the time. I have annually given a light dressing of salt, woodashes and bone dust to each tree, and never any other manure. I have not cropped the land. I have never had a leaf, twig or spot in the least affected with the blight. The trees make a fine growth and always look as though they had just been to supper. I have also put salt around older trees formerly very badly affected with blight, and though it may not be a specific for blight in all cases, I believe it is one of the best fertilizers we can use, both on Pear and Quince. Indeed, unless in a very unfavorable soil and situation, I should have very little fear of blight where salt is freely used.

Niagara Co., N. Y. J. S. Woodward.

THE YELLOW TRANSPARENT APPLE.

In the list of Russian cions sent out by the Department of Agriculture at Washington, in 1869-70, that numbered 334 and named "Skwosnoi Krasnoi, or Yellow Transparent," was the apple figured on this page. The tree, grown from the single cion received by the writer, began to bear in 1875, and the past season yielded not less than four bushels of fruit. The cut is an exact reproduction, as to size, of an average specimen from that crop, but is at least one-half smaller than specimens from the same tree in previous years. If the fruit had been thinned one-half, I have no doubt that the measure of ripe fruit would have hardly been lessened. This apple is, when ripe—in mid-August—of a delicate straw-yellow, with the wax-like beauty of skin that marks so many of the Russian apples. In texture the flesh is very soft, almost melting; but if gathered a few days before full ripeness, the fruit bears transportation very well, owing to the firmness of the skin. The flavor is mild and pleasant, but not high. The fruit adheres well to the tree, in which point it is far superior to the Tetofsky. I regard it as likely to be a very profitable apple for a near market, while the hardiness of the tree adapts it to climates where the Early Harvest will not succeed. The fruit has always been perfectly fair. T. H. Hoskins.

Orleans Co., Vt.

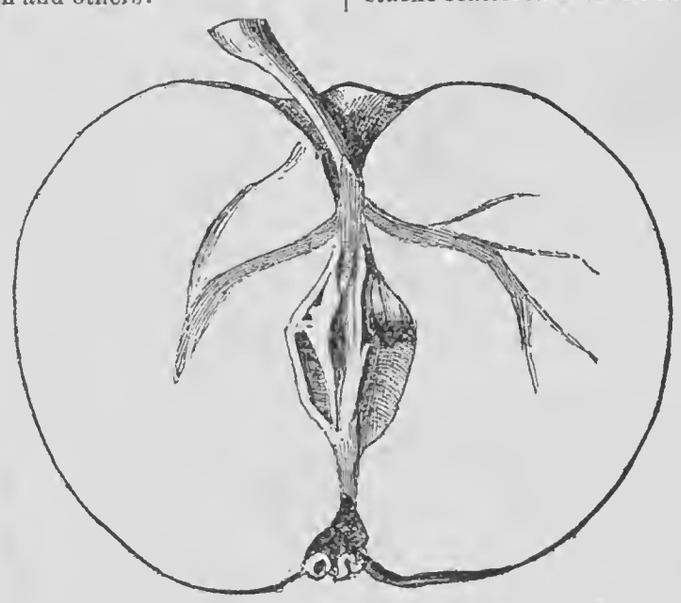
Floricultural.

FLORICULTURE IN TEXAS.

G. MARTI.

The generality of flower gardens in Texas this fall are a rather dreary sight for us who have been used to see them in full splendor at this time, rivaling, if not excelling, their appearance even in spring. This is due to the unprecedented drought we have experienced from early spring to this late autumn. The effect of this parchingly dry weather continuing for such an extended term, is manifest everywhere, not only by the stunted growth most plants made, but also in the culling out and entire destruction of some or our choicest specimens. It has worked a sad havoc, especially among Roses. There are some of the most recently introduced sorts, which seem to have had their vitality and vigor so much impaired by hybridizing, crossing and re-crossing, and rapid, forced greenhouse propagation and culture, that, when planted out, no amount of care and nursing in this, for them, unwonted condition, will save them from gradually dwindling away and dying. And if one, after all his pains-taking, is fortunate enough to see the so-much-looked-for flower, in nine cases out of ten he finds himself disappointed in looking upon—despite all the favorably descriptive adjectives catalogues lavish upon these sorts—a poor, flabby thing in comparison with which a Wild Brier Rose would be a model of perfection.

Wonderful as are the improvements that have lately been made, and are still being made, in certain classes of flowering ornamental plants, as a whole they amount to very little in the Rose family. Is there, for instance, in the Bourbon class any novelty that beats the old Souvenir de Malmaison—free-blooming qualities, size, fullness and portliness of flower and hardiness of plant under even a parching, tropical sun, considered? Or, does the name of Hybrid Perpetual come nearer to truth in any new variety than in such ancient sorts as the Queen or the Giant of Battles? Or, does the fragrance of most of the recently introduced Tea Roses come anything near to that of such reliable old sorts as the Thea lutea, Devoniensis, Gloire de Dijon and others?



YELLOW TRANSPARENT APPLE — SECTION.

Very few of the small-leaved evergreens or conifers will stand the summer here; but we are fully paid for this deficiency by a great number of large-leaved evergreens, mostly greenhouse shrubs in the North, but fully acclimated here. They even stand, unharmed, a degree of frost to which our Northern florist never would venture to subject them. I have seen orange trees cut down to the roots by a frost which would not harm such plants as Cape Jessamines, Pittosporums, Sweet Myrtles, Eriobotrya Japonica, or the Japan Medlar, Laurestinuses, Sweet Olives, Camellias, Crataegus Chinensis, and the pretty evergreen climber Rhyncospermum jasminoides. Somewhat more tender are such of the greenhouse deciduous shrubs as Lantanas, Lemon Verbenas, Hydrangeas and Erythrinas. Even Crape Myrtles and Pomegranates will suffer occasionally. This is due to the fact that they are easily excited to growth, a few warm winter days causing the sap to rise, when a cold snap following will hurt them, which would not have the least effect upon them in a state of rest. Hydrangea paniculata grandiflora is worthless here; despite copious waterings, it loses its leaves through the summer, dwindles and at last dies. Lilies in general, with the exception of L. longiflorum, also Tulips and Crown Imperials die out. Hyacinths, Narcissus and Jonquils succeed very well. Even Ranunculuses and Anemones give satisfaction; they grow like Violets through the winter, and bloom early in the spring. Most of the Amaryllis feel at home here, and multiply fast.

Not all of the hardy flowering shrubs, however, will endure the long summer. Spiræas and Deutzias do moderately well. Weigelas will frequently bloom in the fall again, though it stunts their growth. Lilacs and Snowballs are failures. I tried the last, grafted upon the Black Haw—Viburnum prunifolium. It takes to the stock well, but fails to give more satisfactory results than on its own roots. Dahlias will bloom from May until frost, if proper care is bestowed on them. They require a naturally well drained soil, and almost daily waterings during the hottest days. It is better to raise them from slips from the roots, than to rely on these last; for in this case, they degenerate speedily. Carnations are difficult to manage; they stand a good deal of drought but summer rains and hot moisture work speedy destruction to them. With no amount of care will Paonies succeed here; they are very tenacious of life, however; the roots will push a few leaves in spring; these will soon die again; repeat the same process next season, but never show a flower. The greater part of annuals give the best satisfaction if sown in fall; thus they will be in their prime in the spring and early months of summer, before the hot days are upon them.

Harris Co., Texas.

WINTERING STANDARD ROSES.

One of the difficulties that attend the cultivation of Standard Roses, in this country, is successful wintering. The plants may be taken up and heeled-in in a shed, or other protected place, but besides being a great deal of work, the roots are always more or less injured, and when the plants are re-set the coming spring, it takes them often to midsummer before they again start to grow, and many never start at all. Wrapping the heads in straw is not only much work, but in our severe winters it is rarely they can get sufficient protection this way, and, besides, it does not add beauty to the landscape to have small straw-stacks scattered over the lawn all winter.

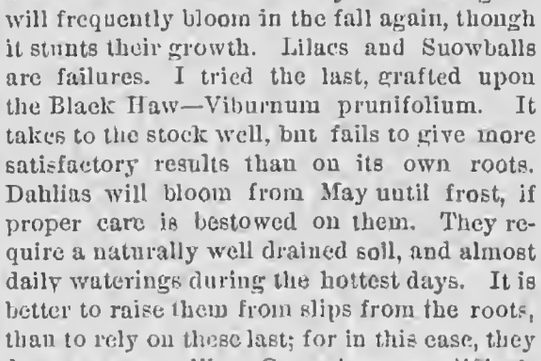


Fig. 2.

The most successful way of protecting the plants is simply to bury the heads in the ground, as shown in the engraving. Fig. 1 shows the plant in its natural position, and fig. 2 shows how it should be buried. A hole is dug in the soil large enough to hold the top, which is bent into it and covered with fine soil. The work can best be done by two men; one carefully bends the stock toward the ground, while the other, to relieve the strain, thrusts a digging-fork under the plant on the opposite side, and gently raised the roots on that side.

Fig. 1.

This will not injure the roots to any extent, and in the spring the plants can again be readjusted without difficulty. As the cold increases, both roots and top can be covered with leaves as thick as needed.

Farm Economy.

THE BEST TIME TO MARKET WHEAT.

This question has been discussed pretty thoroughly by the Onondaga Co. Farmers' Club; and at the last meeting a report was made of the prices, in this market, for the last ten years, that may be useful to the farmers throughout the State. Syracuse prices, of course, correspond with the prices elsewhere, making due allowance for distance from market, freightage, etc. Below is the report with table annexed.

Mr. E. M. Gilson, to whom a resolution on the subject of market values was referred at a previous meeting, submitted a report as follows:—

"In accordance with a resolution offered at the last meeting of this club, I present the following table, showing highest and lowest prices of wheat in this market for each month for ten years, from October 31st, 1869, to October 31st, 1879.

I have computed the averages, and arranged the figures in a convenient form for reference, showing highest and lowest prices for every month in the period named, and with summaries carried out, showing extremes reached during each year, and the whole range of ten years for each month of the year. The highest price recorded is $2.30 per bushel, which was paid in May 1877; the lowest, 95 cents, in October, 1878."

Averages by months, beginning with the highest, are as follows:—May, $1.49 2-5; June, $1.45 17-20; July, $1 30 3-10; February, $1.39 1-5; April, $1.38 11.20; March, $1.37 6-10; December, $1.36 9-10; November, $1.33 1-5; October, $1.32 19-20; January, $1.31 4-5; September, $1.29¾, and August, $1.29 6-10. A difference of 20 1-5c., in the highest and lowest average prices for the whole year. As will be seen by the above, July is just as good a month in which to sell as February is. In the order named, December, November and October prices average better than those in any other months until the last of winter. In August and September prices average about 3c. lower than in October; 4c. below prices in November and 7c. less than in December. After January there is a steady gain in prices until May, when according to the record, the highest average is reached.

		4-5	1-5	6-10	11-20	2-5	17-20	3-10	6-10		19-20	1-5	9-10	

The above table is compiled from the books of Jacob Amos & Sons, who own one of the largest flouring establishments in this part of the State, and is reliable, as it shows actual purchases. From the apparent advantage of holding wheat until May—which this table shows—we should deduct interest, liability of loss by fire, destruction by rats, etc., before deciding whether it is wisest to hold the crop, or not. Nelson Ritter.

LOSSES IN THE CELLAR.

It is rare to find cellars which are every way adapted to storing roots. Some are too wet, and vastly more, which are perfect as cellars in every other respect, are, for that reason, too dry. There is a constant evaporation going on from fruit and roots, and in the latter especially the loss of weight from evaporated moisture is sometimes a serious item. Where there is no rot in potatoes, the shrinkage from storing till mid-winter is generally two to five per cent., unless, indeed, the potatoes are stored in such large heaps that only a small surface is exposed to the air. But in this case the potatoes suffer loss from premature starting of the eyes, and this is worse than the other. All that the bud or eye grows is so much lost to the nutritive value of the potato; all its weight has come out of its salable value, and if the eyes have grown much, it will need a sharp advance in price to cover these losses. When men put several hundreds, or perhaps thousands of bushels of potatoes in the cellar in the fall, they can never take out as many bushels in the spring. There is always some rot, and, with the best of care, other losses cannot always be avoided.

Cellars are generally too warm, and if this is guarded against, it is by admitting outside air, which increases evaporation and endangers freezing. If we could keep cellars four to six degrees above the freezing point, it would be just right for potatoes. A still lower temperature, bordering on freezing, is better for apples and turnips. In ordinary winters, storing potatoes in pits is much the best way where it is certain that they will not be needed until spring. Some farmers here pit all their seed potatoes, selecting those of good shape and rather under-sized for market. Seed potatoes thus kept can be unpitted in April as fresh and sound as when put up. Keeping them in a light, cool and dry room until ready to plant, will give about as good seed as need be asked.

Beets and other roots suffer greater losses by evaporation than potatoes. Turnips, especially, are apt to become dry and stringy from loss of their juices. One way to partially prevent this is to throw a few sods over the heap in the cellar, which can be removed whenever the housewife has occasion to attack the root pile during the winter. As a rule, the early and sugar beets and white turnips are only fit

for fall and early winter use. Rutabaga turnips keep until spring, and really improve while in the cellar. The coarse mangel-wurtzel is always better towards spring than the finer varieties. The catalogues classify Swedish turnips and mangold beets "for cattle," but both are really good for the table in their proper season. The best rutabaga turnips are, to my notion, sweeter and richer than the smaller white turnips, and they entirely supersede them for my eating after January.

Monroe Co., N. Y. W. J. FOWLER.

ALL ABOUT MUCK.

MUCK is the richness of the uplands washed by the annual rains down to the lowlands. It accumulates there, because it can get no lower, and coming down in a semi-liquid condition, as soon as it is at rest, the sun evaporates the water from it, and leaves a (generally) black, unctions mass of soil which is composed almost entirely of soluble material. Cultivating the uplands to exhaustive crops, and washing the remaining richness out by rains, soon render such lands nearly barren. Digging out this deposit and hauling it to such fields as supplied it, is merely restoring a runaway to its home. As the muck, in its passage downhill, has lost the coarser parts of the original soil, which made a loose and porous seed-bed, it has become so solid, so compact, that the atmosphere is absolutely excluded, and the muck by itself is a mere paste, impervious to air, warmth and all the invigorating influences of summer rains. To make it again valuable, then, it must not be merely carted out and spread over the field, but it must be mixed with the soil as deep as the roots of the crop require, by plowing, harrowing or shovel-plowing under. This process restores it to the place it occupied before the washing-out process took place, and to enable us to do this cheaply, the unctuous mass is dug out in the fall, piled up on a slope to drain, and left to freeze friable during winter; then it will return to its proper place in the barren soil and *at once* restore its original fertility. M.

Field Crops.

TOBACCO IN VIRGINIA.

THE peculiarity of the fancy yellow tobacco made in a few counties of Virginia and North Carolina, is that it is tobacco with the least tobacco in it. Although it has a superior flavor and a beautiful color, and is a luxury almost innocent, yet it contains so little of the narcotic properties that are found in the heavy shipping tobacco, that it is almost a different commodity. The chewers or smokers of this article would reel with drunkenness from the effect of one quid or pipeful of the heavy, strong article made in the Western States. The fancy city gent can safely puff his pipeful of "Gold Dust" without any of the brain weakening, stomach sickening effects, usually attributed to tobacco. I have often wondered what becomes of the immense amounts of heavy tobacco that are grown in the United States. I am certain I have never met with a dozen men that could use it, and these dozen were Irish colliers.

Now, I never saw the great sin of a moderate use of any luxury. If we were to confine ourselves to the real necessaries of life, we would play sad havoc with many industries. I think that a nice chew of fancy Gold Leaf tobacco is an innocent luxury. I never knew many men injured in health or pocket by such indulgence. When a man can bring himself to the point to use mean, poisonous stuff, he at once loses caste with the aristocratic fine-twist chewer, and is ostracised at once. What real gentleman could think of associating with a man who would pull out a plug of black "navy," and take a chew!

Really there is something more in this little pleasantry than you would at once perceive. That men will use tobacco is a foregone conclusion. That abuse, ribaldry and insult will not break them of the habit, is undeniable. Now, if they *will* use tobacco, I think it is best to try to elevate their taste and insist on their using the fine, harmless article. In promoting this form of culture one will find few opponents.

Ashville, N. C. S. C. SHELDON.

Horticultural.

WESTERN SMALL FRUIT NOTES.

I FRUITED over 20 varieties of Strawberries this year.

THE BLACK DEFIANCE stands No. 1 for flavor, among all the kinds I have ever seen. The unanimous testimony of all who tested it hereabouts was that they never tasted anything to equal it. It was not large, ranging rather below than above medium in size. Though it may not prove profitable for market, it should have a place in every family garden.

THE CUMBERLAND TRIUMPH seems very much like an over-grown Green Prolific. Plants, very vigorous and productive; but berries too soft and too light-colored for market.

THE GREAT AMERICAN is a failure here. Probably on heavy soil with extra care, it may do better; but on this soil it was not prolific and the berries were small.

COWING'S SEEDLING gave the largest fruit this year. But the very large berries were the most irregular in shape, that I ever saw. Many of them looked as if two or three very flat berries had grown together. Otherwise, Cowing's Seedling resembles the Charles Downing very much.

THE MONARCH OF THE WEST gives the most *very large* berries of any variety I have grown. On good soil without extra care it will average larger than any other kind that I have tested.

THE TURNER stands No. 1 for market among the Red Raspberries that have been thoroughly tested here. The fruit is not as large as the Herstine, but the bushes are more prolific and are perfectly hardy. The berries are of good flavor and stand shipping very well, if put up in pint boxes.

THE BRANDYWINE is not a success here, the bushes are weak growers and not very prolific. The berries are smaller than the Turner and very poor-flavored. They are, however, very firm, coming nearer the Black Caps in this respect than any other red berry I have seen. On this account they may prove valuable for shipping to distant markets.

THE THWACK is the most promising that I have fruited among the newer varieties. It is vigorous and productive and seems to be hardy. It was not hurt at all last winter, when Kittatinny, Wilson's Early, Early and Missouri Mammoth Blackberries near-by were killed to the snow line. The berries are large and resemble the Herstine very much in color, size and flavor.

THE GANARGUA has nothing to recommend it, and may as well be dropped from the list as worthless.

THE NEW ROCHELLE is hardy, vigorous and remarkably productive. The berries are large, but very dark-colored and the flavor was so bad we could not eat them, and did not pick a quart, but allowed the whole crop to waste on the bushes.

THE CAROLINE is not so vigorous, but is hardy and productive. But the color is objectionable, being a dull, dirty yellow; and the flavor is, if possible, worse than that of the New Rochelle.

THE SENECA, among the Black Caps, is worthless, being no larger than the Doolittle, while it is as late as the Mammoth Cluster.

GREGG'S MAMMOTH was no larger or better than Mammoth Cluster this year.

KITTATINNY, WILSON'S EARLY AND MISSOURI MAMMOTH Blackberries being killed to the snow line, yielded very few berries.

SNYDER, WESTERN TRIUMPH AND TAYLOR'S PROLIFIC were uninjured. The Snyder, though not equal to the Kittatinny in size or flavor, is more profitable for market, because hardier. The Western Triumph is hardy, vigorous and very productive. The berries are very sweet and fine-flavored; but are rather small. The fruit of Taylor's Prolific resembles the Kittatinny very much in shape and flavor, but is not quite so large. W. C. STEELE.

La Porte Co., Ind.

Miscellaneous.

A HOTEL FARM.

MR. T. R. PROCTOR, of Utica, N. Y., is the proprietor of three hotels—two in Utica and one in Richfield Springs. To supply them with fresh vegetables, poultry, milk, etc., he has established a farm just beyond the limits of Utica, known as Bagg's Hotel Farm, which is a model one in many respects. Of the 60 acres comprising the farm, 48 are devoted to growing vegetables; 15 acres are used in raising seed, and the truck garden is laid out on a comprehensive plan. Sufficient grain and hay are produced to meet the requirements of stock, etc. The stock is, to visitors, one of the most attractive features. The animals are mainly thoroughbred, comprising Jerseys and other good strains. A herd of over 120 head of swine are in the pens, at the head of which are such animals as imported Yorkshire boars "King George," "Sir John," (purchased from R. H. Hoe.) besides the sow "Grand Duchess" and eight others of the same breed, imported by the proprietor. The Berkshires are led by "King Philip" (bought of T. H. Cooper).

The farm is under the management of Mr. Thomas Hagnes, who has, during the past six years, paid the closest attention to securing the best results from land and stock. Everything about the premises, including buildings, is kept up in the most perfect form, and in addition to supplying the hotels with most of the food consumed, there are raised and sold each year from three to five hundred thoroughbred pigs. At the State fair Mr. Proctor exhibited some fine cattle and swine, securing five premiums, and at the Oneida Co. fair 14 premiums were awarded the stock and products of Bagg's Hotel Farm.

Mildew and Salt.

The word, mildew, as a name for the condition to which excessive temperature and, perhaps, other unknown causes, reduce the leaves of many plants, is a misnomer. It leads directly to the idea that *dew*, or a slight *dampness*, is the cause of it. It is, in fact, a fungus growth, which can only exist in an extremely hot and *dry* atmosphere. It has, in that respect, a similarity in the exciting cause, to the generative sources of some sap-suckers or some species of aphides. Now, the remedy for all destructive life, animal or vegetable, produced by dry heat, is the opposite condition—a cool moisture. Salt strewn upon the ground under gooseberry bushes, by attracting moisture from the air *and holding it there*, counteracts the tendency to mildew. Mulching has the same effect, is more lasting, and is, also, of great benefit in protecting the surface roots from the intense heat. I consider salt only of real use when mulch cannot be applied, as in the case of grain fields, closely-set plants in ribbon beds, or any similar cases where plants are too close to admit of working between them.

Dodge Co., Neb. S. RUFUS MASON.

AN ITENERANT HUMBUG.—"It is said that the Chinese have a method of preserving grapes during the entire year by cutting a circular piece out of a ripe pumpkin or gourd, making an aperture large enough to admit the hand. The interior is then completely cleaned out, the ripe grapes are placed inside, and the cover replaced and pressed in firmly. The pumpkins are then kept in a cool place, and the grapes will be found to retain their freshness for a very long time."

The above paragraph is "going the rounds" of the newspapers; but I wish some of these wise philosophers should inform us how to preserve the pumpkin. I think if one were to pack grapes in this manner, he would have a *delicious* mess long before the year rolled around. It is curious to note how such "*booky*" screeds as the above receive such an extensive circulation, while really sensible and practical ones, are hardly noticed.

As an eminent writer says:—"The more gross the fraud, the more glibly will it go down, and the more greedily will it be swallowed, since folly will always find faith wherever imposters will find impudence." N. R.

The Herdsman.

CHICAGO FAT-STOCK PRIZE WINNERS.

THE fat-stock show that closed in this city, at the Exhibition building, on Saturday evening, Nov. 22, was the most successful exhibit the Association has given. From first to last the attendance was good, and the show gave high satisfaction. The lessons to be learnt from it will form the subject of another communication; but, meanwhile, inclosed is a list of the chief prize-winners, as a due economy of space will, doubtless, prevent the RURAL from giving the full list:—

LOT 1—SHORT-HORNS.

Steer, 4 years old or over, 5 entries—First premium, Wing & Thompson, Bement, Ill., $25; second premium, Wing & Thompson, Bement, Ill., $15.

Steer, 3 and under 4 years, 2 entries—First premium, J. H. Graves, Chilesburg, Ky., $25; second premium, John B Sherman, Chicago, Ill., $15.

Steer, 2 under 3 years, 4 entries—First premium, J. N. Brown's Sons, Berlin, Ill., $25; second premium, J. N. Brown's Sons, Berlin, Ill., $15

LOT 2—HEREFORD.

Steer, 4 years old or over, 4 entries—First premium, T. L. Miller, Beecher, Ill., $25; second premium, John B. Sherman, Chicago, Ill., $15

Steer 3, and under 4 years, 2 entries—First premium, T. L. Miller, Beecher, Ill., $25; second premium, Thos. Clark, Beecher, Ill., $15.

Steer, 2 and under 3 years, 1 entry—First premium, T. L. Miller, Beecher, Ill., $25.

LOT 9—DRESSED BULLOCKS.

[The bullocks to be killed, dressed and weighed under the direction of the Awarding Committee. The dressed carcasses to remain the property of the exhibitor. Bullock dressing the largest per centage of meat in proportion to live weight.]—Premium, T. L. Miller, Beecher, Ill., $50.

LOT 10—HEAVIEST FAT STEER.

First premium, John B. Sherman, Chicago, Ill., $75; second premium, George Gray, Rushville, Ind., $50; third premium, J. H. Graves, Chilesburg, Ky., $25.

CLASS C—SHEEP.

LONG-WOOLS.

Wether 2 years old or over—First premium, George Hood, Guelph, Canada, $15; second, T. L. Miller, Beecher, Ill., $10.

Wether 1 and under 2 years—First premium, George Hood, Guelph, Canada, $15; second premium, J. A. Brown's Sons, Decatur, Ill., $10.

Wether 1 year—Second premium, George Hood, Guelph, Canada, $10.

LOT 13—MIDDLE WOOLS.

Wether 2 years old or over—First premium, Geo. Pickrell, Wheatfield, Ill., $15; second premium, Geo. Cary, Rochelle, Ill., 10.

Wether 1 and under 2 years—First premium, Geo. Pickrell, Wheatfield, Ill., $15; second premium Geo. Pickrell, Wheatfield, Ill., $10.

Wether under 1 year—First premium, Geo. Pickrell, Wheatfield, Ill., $15; second premium, Geo. Pickrell, Wheatfield, Ill., 10

LOT 15—SWEEPSTAKES—OPEN TO ALL.

Wether, 2 years old or over—Premium, T. L. Miller, Beecher, Ill., $25.

Wether, 1 and under 2 years—Premium, Geo. Hood, Guelph, Canada, $25.

Wether, under 1 year—Premium, George Hood, Guelph, Canada, $25.

CLASS D. SWINE.

LOT 18—LARGE BREEDS.

Hog, 2 years old or over—First premium, B. J. Orton, Cambridge, $15; second premium, Oliver, Fell & Miner, Toulon, $10.

Hog, 1 and under 2 years—First premium, J. A. Countryman, Rochelle, $15; second premium, H. C. Castle, Wilmington, $10.

LOT 19—SMALL BREEDS—EITHER SEX.

Hog, 2 years old or over—Premium, Taylor Bros., Waynesville, $15.

Hog, 1 and under 2 years—Premium, Frank Wilson, Jackson, Mich., $15.

ANTI-SELF-SUCKING DEVICE.

PROF. SHELDON says, in Dairy Farming, that the nose-piece, herein illustrated, effectually cured a cow of his of a persistent habit she had acquired of sucking herself. Various other devices for the same purpose had been vainly tried previously; but where they failed, this succeeded completely. It was made out of a piece of oak board, eight inches long, five inches wide, and about a quarter of an inch thick, and was shaped as shown in the cut, fig. 1. The cow's nostril was sprung or bent until the piece fitted, as seen in fig. 2. Again and again the cow tried to get one of her teats into her mouth, but all to no purpose, for the nose-piece, hanging down, always came between her mouth and the teat. At length she gave it up in disgust, and went on grazing. The device formed no obstacle to her eating, as it floated over the grass without being any detriment whatever.

FIG. 2. FIG. 1.

In making such a nose-piece, care must be taken not to make the two points of it too far asunder, as it would then easily slip off the nose. The points should be about half an inch apart, and nicely smoothed and rounded off, so that they will not hurt the cow.

Industrial Implements.

FARM GRINDING.

LAST summer J. A. Field, Son & Co., of St. Louis, Mo., sent us for trial one of their Big Giant farm mills, for grinding feed by horse-power. We do most of our grinding with it at The Rural Experiment Farm, and find that it fulfills the claim made in its behalf.

It is an iron mill, cylindrical in shape, with its least diameter in the middle. The inner side of the outer cylinder is corrugated, and revolves about a chilled iron cone, likewise ridged. A V-shaped wooden lever extends out a sufficient distance to allow the horse a clear circular track in supplying the power. We have ground corn just as it is plucked from the stalk—husk, cob and all. The product was used for stock-feeding. We have used it also on shelled corn, which has been reduced to various degrees of fineness, and by means of the automatic sieve attachment have made a fine quality of meal. The sieve can be used or removed at will.

We should say that one of these mills would be valuable on every farm. The simplicity, strength, ease of operating, makes it easy for anyone to use it, and the price is reasonably moderate. The Fields have built up a flourishing trade, East and West, and have sent mills to Egypt and other foreign countries. Any one sufficiently interested to wish further information, may write to the manufacturers, mentioning the RURAL, and detailed information will be given.

THE Sèvres vase awarded the Johnston Harvester Co., at the field trials of harvesting machines, at Marmont, in France, has just been received at Brockport.

It is a very valuable and handsome trophy, standing ten and one-half inches high, and measuring fifteen inches across its top, which is a broad, plane surface, holding in its center a medallion representing the head of the goddess Ceres. Surrounding this medallion are appropriate designs in wheat and fruit subjects. The exterior is in blue and gold.

This vase is intrinsically valuable, being the product of the famous Sèvres factory, which ever since its acquisition by Louis XV., in 1760, has been maintained by the government, and its rare art products almost entirely reserved for presents to kings, ambassadors, etc.

It will serve as a lasting and beautiful token of the triumph of "The Johnston" over its 35 competitors, on the occasion in question.

Everywhere.

CHAT WITH THE RURAL.

EX-GOV. ROBERT W. FURNAS, OF NEBRASKA.

I HAVE read that excellent, old and familiar visitor, the RURAL, with pleasure and profit, these many years. If I were sure its originator would not hear me, I would say that as it grows older I like it better. People should grow better as they grow older. Why should not publications, especially those devoted to agriculture, horticulture, pomology, and kindred subjects, do so?

While we out West—in the very "Far West"—talk and write among, and with, ourselves about agriculture, do you know how timid and embarrassed we feel to appear before a Far East audience, or through the columns of an agricultural periodical older than many of us? More appropriate for us to sit at the feet of such men as Wilder, Thomas, Downing, and other silver-locked veteran teachers and laborers, and learn from them lessons of wisdom, speaking from age and experience. This would seem the more proper. And yet, while we obtain fundamental general principles, and much else desirable and valuable from the old States, and from the brains of honored forefathers, do you know that we have had much to learn, out here, from actual experience, having had not a few original problems to solve.

You will remember when *we* "studied geography" that all now known as the Great West, more particularly that region west of the Missouri River and east of the Rocky Mountains, was designated, characterized and set apart by the books as the "Great American Desert." Government officials—General Fremont, Captain Miles and others—reported it a barren waste. Twenty-three years' successive residence in Nebraska, an eye-witness to the wonderful changes that have taken place within that time in the climate, rainfall, and actual soil products, warrants the concession, at least, that the data upon which was based our boyhood geography was correct. Allow me to mention one single instance or feature of the great changes I have personally witnessed.

What was known, even since the beginning of the current decade, as "the Sand Hills" in Platte Valley, near Fort Kearney, were actually as destitute of any kind of vegetation as the mid-street of Broadway in your city. Now luxuriant native grass grows all over these hills. Cattle and live stock of all kinds grow fat and sleek among them, and thousands of tons of blue-stem hay are put up annually. Ten years ago one knowing this region could not be induced to take a million acres of these lands as a free gift—now they are being occupied by enterprising tillers of the soil and good crops raised. I made a short trip through this section of the State the present season, and confess to great surprise at what "my own eyes beheld."

When I first came here, settlers—"squatters" they were then called—"hugged" the west bank of the Missouri River, never dreaming of going further into the interior than eight or ten miles. The valleys of the Nemaha, Blue, Platte and Republican Rivers further inland, were "good enough, perhaps, but we will never live to see the country settled up and civilized out that far!" The man who talked of planting fall wheat, for instance, was "crazy." One who would plant a fruit tree then would have been sent to the lunatic asylum, had there been one near enough. You can readily imagine that "we old settlers" had not much to encourage us—that all was an experiment. Without particularizing, you are familiar with results and the facts as they exist to-day. No portion of our national domain stands higher as to general and diversified agricultural products. The "twin sisters"—Nebraska and Kansas—have carried away three first national pomological premiums awarded by the American Pomological Society—the former two, the latter one. While, as before conceded, we learned much from the East—brought much of it from there with us—we have had much more to learn for ourselves, and are, therefore, entitled to some credit for originality. Don't you think so?

The present season with us has been an unprecedented one in many respects: crops have been good all over the State, in some portions, however, better than in others, and some kinds better than others. Corn and wheat—the great staple products—are more than an average. Prices are better than usual. Farmers, and, consequently, *all* the people, are in better condition and heart than for many years. More good, solid improvements are being made. Hundreds who came here a few years ago, and have delved along, living in "dug-outs," are now enjoying comfortable, in very many instances, even luxurious homes, with all modern advanced civilized and enlightened surroundings. More railroads are being constructed this season than in any two or three years before. The rapid filling up of the State, together with the advantageous facilities for railroad building, warrants this increase. A few years more and Nebraska will be spider-webbed with railroads. We have "passed through the deep waters," are out on high, dry land, and on the road to future greatness as a people. We now have more to encourage—more to live for, methinks, than you in the old and established portions of the United States. There is more of the future before us, more to make, more to obtain.

The grazing interest in the western portion of the State, and west of that, has already assumed unthought-of proportions. I dare not tell you, and you would be slow to believe, how many hundred thousand head of live stock are now feeding and keeping "beef-fat" the year round, on simply the nutritious native grasses on the plains east of the Rocky Mountains, and how many go annually to feed the consumers of the East. This "Great West" is the bread and meat-producing region of the world.

Digressing a moment, I agree with the RURAL in its interpretation of the word "extravagance." One is entitled to, and even criminal if he or she neglects, to enjoy and absorb all there is good in this world, legitimately and rightfully obtainable. So long as expenditures are kept below one's honorable income, there is no extravagance. The moment this boundary line is overstepped, whether the amount be one cent or one million dollars, then there is extravagance.

When I sat down to partly fulfill a promise to write you, I had no intention of sermonizing; but on looking over my hastily-penciled pages, I find that I have come well-nigh to it. It is Sabbath, and I had just returned from church, after hearing an excellent discourse on the subject—"Progress." Hence the line of thought indulged in. I had promised you some notes in relation to my new forty-acre fruit farm, planted this season. But as I have now already imposed on your good nature [No, no.—EDS.] in a rambling manner, let it suffice for the present. Perhaps, some other time I may let you know how many apple, pear, peach, plum, prune, nectarine, apricot and cherry trees, grape-vines, flowering shrubs, and so on, I have planted; the varieties, what distance apart, location, soil, manner of treatment, etc., etc.

Brownville, Neb., Nov. 16, 1879.

RURAL SPECIAL REPORTS.

N. Y., Elmira, Nov. 22d.—We have been favored by a heavy rainfall which has put an end to the most severe drought ever known in this locality. It has filled dry wells and cisterns and started streams and has improved greatly the condition of winter wheat, which owing to the dry weather has made but feeble growth. Farmers about here have been very busy for the past 10 days stripping tobacco, which was taken down in fine condition. Owing to the warm, wet weather, and the unusual green state of the stalks, it was necessary to strip the leaves from the stalks in the least possible time, to prevent damage from heating in the pack, which had commenced in many cases.

The past few weeks have witnessed a marked change in the prices of nearly all agricultural products. An upward tendency is clearly visible, and our farmers begin to feel encouraged over their future prospects. The prices of the most important products are as follows: wheat, $1.30 to $1.35; corn, 60cts. to 62 cts; oats, 36 to 40 cts; barley, 65 to 75 cts per br.; hay, $12 to $14 per ton; butter, 28 to 30 cts per pound.

N. Y., Syracuse, Onondaga Co., Nov. 21.—We are now in the midst of a cold snap. The thermometer stood at 14 degrees above zero this morning, with a piercing wind, and a slight fall of snow. My Grape-vines are about half laid down and covered. While I shall probably have open weather to finish the job, I should much prefer not to have the vines exposed to even this slight freeze. Many grape growers in this vicinity leave their vines up all winter; but I prefer to be on the safe side.

N. R.

MICH., Gagetown, Tuscola Co., Nov. 20.—On the 2d day of November we were visited by a heavy snow storm which lasted about six hours; but did no damage. There has been more wheat sown in this county this fall than in any one season before, and it is growing rapidly; even late sowed wheat is in excellent condition for the winter. Potatoes are a good crop and nearly all have been secured. Corn is above an average yield throughout the county, and farmers are busily engaged in husking and storing it. N. E. D.

CAL., Penryn, Placer Co., November 14.—We are having our first genuine rain storm for the season, and from necessity we are compelled to stay in the house, which I often think is providentially arranged that we may perform long-neglected duties without interfering with out-door work. I have long had a desire to write to the RURAL, but for very many reasons have been unable to do so. Perhaps many of your readers who desire to change their residence from the climate of the Eastern States for our beautiful climate would do so at once if they could be satisfied first that they really knew from reliable information what they could do when they got here. The great trouble with many who have come here with high hopes, has been that the information that sent them hither was obtained from circulars sent out by our railroads and colonization companies or societies. These have been so highly colored that they were, in fact, misrepresentations. They have taken exceptional cases and represented them as the general results. The consequence has been that we have been compelled to hear "curses loud and deep" from very many who have come to California within the last few years, when really any sensible man must have known that the expectations to which these exaggerated circulars gave birth, could not be realized. Our particular locality affords at this time an opportunity for a man of small capital, say from $2,000, to $3,000, to make a good investment and by industry and reasonable economy he may expect to make money. Understand in this connection I wish it distinctly understood, that it is necessary that a man should have a practical knowlege of fruit raising in all its details. With this knowledge and the habits I mention, it is almost impossible to fail. Our soil is a decomposed granite which, I am told, has proven the very best for the production of fine grapes and many other fruits. Our markets are San Francisco, Virginia City and many other smaller places east and west on the line of Central Pacific R. R. We are within about eight hours of San Francisco, sufficiently near to ship berries. Our peaches—of which we produce more than of anything else—usually bring in the San Francisco market from 30 to 50 per cent more than those from any other part of the State. Both soil and climate are particularly adapted to their successful cultivation. For the past two seasons we have been setting out Oranges, Lemons, and Limes, as it has been proven, beyond a peradventure, that they can be cultivated successfully on our foot-hills. There have been trees in bearing, in our neighborhood, for 10 or 12 years, raised from seed. I have thought that perhaps these were more hardy than budded trees—time will tell. For the production of berries of all kinds, our foot-hills are equally well adapted. Now this being the case, a man with practical knowledge of the business and reasonable expectations, can find among us a home that should be satisfactory in every way. In reference to climate, we have the very best, and, of course, this implies that it is very healthful. Land, uncultivated, can be bought at from $10 to $20 per acre, according to quality and location; if situated near a railroad station it would, of course, be worth more than if it were a considerable distance from it.

Of the seeds I received from the RURAL last spring, the Acme tomato has proven the best we have ever raised. From the seed sent I shipped about 45 forty-pound boxes. The Golden Rural is excellent, but the color and size are objectionable for market, except for preserving. The Beauty of Hebron potato proved to be about equal to the Early Rose, both in quality and earliness: the Voorhis watermelon did exceedingly well. From the seeds sent I raised fifteen melons ranging from 10 to 20 pounds each, and they proved both early and delicious. Pearl Millet I must say I do not like as well as Egyptian corn, neither for quality nor quantity of feed produce. Blount corn was not a success. We made a failure with our flower seeds from the fact that other duties, more pressing, caused us to neglect them. Seedsmen, I think, are oftentimes censured when the blame for poor returns lies with the man who plants the seed. J. W. B.

CANADA, St. David's, Lincoln Co., Nov. 17.—Crops of nearly every description have turned out well in this section, and the prices realized therefor have been satisfactory. The yield of late potatoes is excellent; though in some places they are rotting badly. My Blount's corn has just closed a most remarkable career of stalk-growing, and has, besides, yielded ears and nubbins to the amount of one bushel from 64 hills—two stalks to the hill—while my Early Canada corn adjoining it yielded from 1½ to 2 bushels from the same number of hills, the culture being the same in both cases. Therefore no more Blount's corn for me; besides, had the Blount's corn yielded well, in this locality it would not ripen one year in ten. Whether scientific training has made it so I know not; but this corn has developed some peculiar characteristics—one is its tendency to unite heaven and earth in a straight line; unless magnificent one is to vary the number of rows on the cob from 8 to 16; and still another, to vary the shape of the kernel, on some ears it being broad and indented; on others slender, flinty-looking kernels are found with no indentation. It also varies in color from ears nearly purple to those of a pure glossy white. The only thing approaching uniformity in this variety—that I can discover—is, first, its multiple earing, and, second, its tall growth; and both of these traits I regard as faults, the first when more than two ears are attempted on one stalk, and the latter absolutely, unless the stalks can be utilized for fire-wood or fencing material. I think it time that farmers were disabused of the idea that the corn that attempts the growth of six or eight ears on a stalk, is *the* corn. Why raise so many nubbins to produce the same weight of corn as will grow on two ears, and thereby necessitate so much extra work in husking? Moreover, the husks around these nubbins and the cobs therein, to a great extent, are a draft upon the vigor of the plant, that should be expended in producing grain. My opinion is that breeding for more ears will not be attempted by the corn-breeder of the near future, but the ears will, perhaps, be thinned, as we now thin fruit, and fewer but longer and more perfect ears be striven after. If Blount's corn does not "mend its ways," ten years hence it will be spoken of only as one of the thoroughly-tried but discarded varieties of the past. E. M. A.

The Querist.

ANSWERS TO CORRESPONDENTS.

Plaster and Charcoal.

P., Portsmouth, Va., asks the relative value of plaster and charcoal as a top-dressing for clover or grass, and also in a compost.

ANS.—Plaster and charcoal have nothing in common by which they may be compared. Charcoal is absolutely inert and of no use as a fertilizer; it may operate indirectly as an absorbent of oxygen, or other gases, for which it has a great affinity, and serve to hold them until the roots of plants which come in contact with it can make use of them; but it has no power to act in any other way. Charcoal contains the mineral matter—the ash—of the wood of which it is made, and a portion of the cellular tissue in a state of carbonization. In this state it is practically indestructible, and may remain in the soil for years unchanged. Plaster, on the contrary, is a salt of lime, soluble in water, and possessing the power of chemical reaction when brought into contact with substances upon which it exerts its effects. It consists of sulphuric acid, 46½ per cent., lime, 32½ per cent., and water of combination, 21 per cent. The chemical union between the base (lime) and the acid is rather weak, and is dissolved when the plaster is brought into contact, in solution, with a base, such as ammonia, for which the acid has a stronger affinity than for lime. This case of decomposition is one of its chief values, agriculturally, as it acts very usefully in combining with free ammonia and fixing it as sulphate of ammonia, leaving the lime free to enter into combination with carbonic acid, for which it has a stronger affinity than for sulphuric acid. As to the actual money value of the two, it may be said that charcoal is worth no more than for the potash contained in its ashes, which is, perhaps, a cent or two a bushel; while plaster is worth its usual market value, which is about 40 cents a bushel when ground for use, this value being more than that of its acid and lime merely, on account of its favorable action, chemically, in other ways than by the addition of its simple ingredients to the soil, and also because of its effect upon the clover crop, an effect that is not, as yet, fully explained.

"Burry" Wool, etc.

B. L. B., Bucksville, S. C., asks, what is the difference in price between wool with cockle burrs in it and that free from them; 2, how should they be removed; 3, will the Department of Agriculture, at Washington, analyse minerals; 4, when should alfalfa and orchard-grass be sown in that latitude?

ANS.—Wool with burrs in it goes into market as "burry," and is considerably reduced in value. The prices quoted in a trade list, now before us, are, for tub-washed, choice, 50 cents per lb.; fair, 45 cents; and for burry, 36 cents. So that the loss in value is from 9 to 14 cents in tub-washed wool. Low grades of wool lose even more, and "burry" will bring 33 per cent. less than "fair to good," free from burrs. Burrs can only be taken out by machinery in the factory, and even then some burrs will be left in, as may be discovered by the unfortunate wearer of underclothing, in the material with which some burry wool has been mixed. It is this difficulty which causes the loss in value. The Agricultural Department at Washington does not analyze minerals. That is not in its province. Any specimens you may send to us will be named for you, and if they are sufficiently valuable for analysis, there are parties in New York who would make an analysis for about $3.00. But very few minerals need a complete analysis to ascertain their value. Alfalfa should be sown early in the spring. Orchard-grass should be sown in your latitude in September.

Miscellaneous.

A. D. M., Detroit, Mich., intends to plant 1,000 Grape-vines; 1,000 Currants; 800 Gooseberries; 600 Raspberries and 500 dwarf Pears, planting two rows of the small fruit between the rows of Pears; the land is good, black garden soil manured every year and this fall and productive of a good yield of any garden crop, and he asks 1, what should be the nearest distance in the row; 2, whether wood ashes mixed with lime, would be a good application; 3, which would be the better time to apply it—now or on in spring—; and which would be the better—barnyard manure or wood ashes; 4, whether manure should be put with every tree when planted, or whether the land is already rich enough without any additional application.

ANS.—1. We should not plant Currants, Gooseberries and Raspberries—much less Grapes—between Pears—but that is not answering the question. Ordinarily dwarf Pears (on Quince stock) should be at least ten feet apart. Gooseberries and Currants and Raspberries should be four feet apart. Grape-vines should be set not less than ten feet apart. Now our friend can answer the question for himself. If, for instance, between two rows of Pears, two rows, one each of Currants and Gooseberries, are to be set, then let the distance between the Pears be 18 feet. (2. and 3.) The land needs no manure whatever. Do not apply lime at all—the ashes will furnish enough of that. We should defer applying the ashes until the second spring after the trees are set. 3 If only one or the other, manure is better than ashes unless the land is rich in everything but potash. 4. We would not advise you to put *any* manure with the trees or vines. It will be better to apply manure not until the second year after planting as we have stated, and then, if the soil is as rich as you suppose, little benefit will be derived.

A Subscriber, Baden, Pa., picked his apples in good condition, and put them on shelves in the cellar, in layers about 15 inches deep, and finding them showing signs of rotting, he asks whether if they were "picked over," the sound ones would be likely to keep all the better for it; whether 10 or 15 per cent. of rotten apples will injure the rest by coming in contact with them; whether "picking them over" in the cellar would injure the apples, as some people say.

ANS.—There is no doubt that rot in one apple coming in contact with a sound apple will hasten decay in the latter. If handled very carefully, no harm will be done. It is the bruising of apples by careless or hasty handling which induces rot. Covering the sound apples with pure sand would help to preserve them. Otherwise we can only advise cool, dry air, and a low, uniform temperature, above freezing.

H. B. R., Queens Co., N. Y., asks as to the value of leached ashes.

ANS.—About the same as that of lime. The chief difference between leached and unleached ashes is that the former has about nine per cent of potash while the latter has but one per cent.

K. B. M., Byesville, O., wants to know if Daniel F. Beatty, whose advertisement she has seen in the RURAL, is reliable.

ANS.—We have no reason for not thinking that he is reliable in every respect.

A. L. C., Boston, Mass., asks certain questions respecting the house plans presented in last week's RURAL.

ANS.—We must refer him to the architects, Palliser, Palliser & Co., of Bridgeport, Conn.

E. J. F. B., Middleboro, Mass., asks if the climate in which Blount's corn is grown will be taken into account in awarding the prizes.

ANS.—No.

Industrial Societies.

THE ANNUAL CONVENTION OF THE NATIONAL GRANGE.

THE National Grange commenced its thirteenth annual session at Canandaigua, N. Y., on Wednesday, November 19. Never before has there been so large an attendance at the opening of the session. Thirty-one States were represented, besides the Dominion of Canada.

After roll-call and the transaction of other unimportant preliminary business, N. G. Wayne, Master of the New York State Grange, delivered a brief but eloquent address of welcome. He said they had gathered from all the different States of the Union with one mind and one purpose in view, and that purpose was the elevation of the producing people to a higher and nobler manhood and womanhood—to a purer and better social standing. They had come with fraternal feelings extended to all the different classes scattered over our whole country, looking, not back to the past, but forward to the future, with the further purpose in view of creating a more perfect union of sentiment and feeling towards a government that should protect all its citizens alike, whether rich or poor, without regard to location or other surrounding circumstances. Our work, as representatives of the great industrial productive interests, will be for the better protection and advancement of these interests, which are the foundation upon which our prosperity as a nation rests. "Our government was designed," said Master Wayne, "for the express purpose of dealing out simple justice to all its citizens alike, and should not be diverted from that purpose. It would not be but for the spirit of party which now prevails to such an alarming extent as to crush out justice and equity. Powerful moneyed corporations now control our State and National governments, and unless a change is effectually made, and that speedily, we shall all go down under the enormous burdens that are now being imposed upon us. We have come to counsel together and to point out a remedy for the evils that afflict us. We have come with honest purposes, and shall use our best efforts in awakening our people to their true interests, and inducing them to ask our government, respectfully but earnestly, to deal out equal and exact justice to all its citizens."

The Hon. J. M. Lipscomb, of South Carolina, was appointed to respond to this address of welcome. This he did in a very earnest, eloquent and hearty manner. He referred to the plan of the Order, which was well and wisely conceived, its foundations being deeply and firmly laid and its superstructure being appropriately and ornamentally built. He hoped that the labors of this meeting might advance the Order some steps onward towards that perfection we so confidently believe and hope it will finally attain.

After this response to the address of welcome, the annual address was made by the Worthy Master, Hon. S. E. Adams, of Minnesota. This was listened to with both pleasure and profit.

The next business of public interest was a public address by the Rev. T. K. Beecher, of Elmira. He selected for his subject, "Men and Women—the Best and Costliest Products of the Farm." It was a theme upon which he was well qualified to speak, and the address, which occupied nearly one and one-half hour, was replete with good thoughts and practical suggestions.

A considerable amount of time was devoted to hearing reports as to the membership, working condition, efficiency, etc., of the subordinate Granges in the various States. Although the reports, as made by the different States, showed some decline in membership, there had been no decline in real efficiency, and the Order, as a whole, was pronounced stronger than it had ever been before.

Mortimer Whitehead, from New Jersey, the Worthy Lecturer, presented an able and interesting report. He dwelt at length upon the educational features of the Order, the relation of the Grange to railroads and other powerful moneyed corporations, the imperfections of our patent laws and the National Department of Agriculture. The report was a suggestive one, and was listened to with great attention and evident satisfaction.

Saturday was occupied mainly with the election of officers. The term of office is two years, and certainly no organization ever selected its standard-bearers with less unseemly strife or more deliberation. The Worthy Master announced the places to be filled and bade the members prepare their ballots. The Secretary then called the roll of States; the representatives advanced to the table of the tellers, depositing their ballots simultaneously with the call until the roll was finished; then the count was made and the result announced.

I append the full list of officers:—Master, J. J. Woodman, Michigan; Overseer, Put. Darden, Mississippi; Lecturer, H. Eshbaugh, Missouri; Steward, A. J. Vaughn, Tennessee; Assistant Steward, W. Sims, Kansas; Chaplain, S. H. Ellis, Ohio; Treasurer, F. M. McDowell, New York; Secretary, W. M. Ireland, District of Columbia; Gatekeeper, O. H. Dinwiddie, Indiana; Ceres, Mrs. J. J. Woodman; Pomona, Mrs. Put. Darden; Flora, Mrs. J. W. Nicholson; Lady Assistant Steward, Mrs. W. Sims.

W. R. LAZENBY.

Various.

WHAT OTHERS SAY.

A NEW MANURE.—At a recent sitting the Academy of Science (France) received a communication from M. de Molon relative to the production of a new manure suitable for the use of farmers. Manures of any sort, M. de Molon points out, can only serve for the nourishment of plants under the condition that they dissolve in the soil, and that such dissolution is produced under the influence of atmospheric agents, and more particularly of the carbonic acid accumulated in the soil by the decomposition of the organic matters it contains. In the special case of phosphates, this carbonic acid, dissolving in the water of the soil, plays the part of the acids employed in the manufacture of superphosphates, and gradually dissolves the phosphates. If, therefore, we could contrive to submit phosphate of lime, previous to its employment in agricultural operations, to an action similar to that which it undergoes in the soil, but more energetic, we should obtain it in the condition most favorable for assimilation by plants. Phosphate of lime mixed with stable manure before it has fermented, fulfils this condition. Marine plants, also, such as the Fucus vesiculosus and others which are met with in such abundance on many coasts, when combined with powdered phosphate of lime, are capable of producing a sufficiency of carbonic acid to beget chemical action. Successive layers of powdered phosphate and the wrack or sea-weed are piled together in a closed shed, or in a pit, in proportions necessary to induce fermentation, which will vary, of course, according to the nature of the phosphate employed and the variety and humidity of the wrack. The mixture is left to ferment for six weeks or two months, according to the heat of the weather, and if, after this interval, the decomposition of the organic matter is not yet complete, it must be turned over again, which will induce a fresh fermentation, completely decomposing the wrack, which disappears under it entirely. The manure thus prepared contains, besides the phosphate of lime in an easily assimilable form, all the elements of fertilization contained in the vegetable or animal matters employed—that is to say, the nitrogen, the mineral salts, potash, soda, and magnesia.

VACCINATION FROM THE COW.—Dr. Drysdale writes to the London Times saying:—"In the month of September, as member of the International Congress of the Medical Sciences held in Amsterdam, I had the advantage of visiting the general hospital at the Tour when vaccination from the calf was going on there. The room was full of mothers, with their infants ready to be vaccinated direct from the calf, which reclined comfortably on the table, while the physician performed the little operation of transferring lymph from the animal direct to the arm of each infant. I was informed that three-fourths of all the vaccinations in Amsterdam are now performed direct from the calf in this way." He thinks that the authorities ought to take up this matter. 1. Because in times when small-pox is epidemic, a quite unlimited supply of calf lymph can be obtained in about five days, while human lymph at such times is often quite insufficient. 2. Because when we—as he believes we have the right to do—force parents to vaccinate their children, we ought to give them the choice between human and animal vaccine. Vaccination, being the greatest triumph of hygienic science, should be made as popular as possible.

PRESERVING EGGS.—The Backer-und Conditor-Zeitung has put to a practical test a system of preserving eggs which has been lately recommended, and finds it to answer exceedingly well. On March 27, of the present year, the eggs were placed for an hour in a solution of 50 grammes of salicylic acid and a little spirits of wine, diluted with one litre of water, and afterwards packed away in bran in the cellar. At the end of June they were found in perfect condition, and as well flavored as if just fresh-laid. Autumn-laid eggs thus treated should keep good for a much longer time, as they would have all the advantage of colder weather in their favor.—London Farmer.

CABBAGE WORM.—We (Country Gentleman) have seen a statement in some of the papers that cabbages had been kept entirely clear of the insect by the aid of chickens, in a plantation of some thousands of plants. Screenings were first scattered to attract the fowls among the cabbages, and then discovering the worms, they kept the patch clear. We have found this method to answer well, provided the chickens are not full-grown; when older, they eat the cabbages. Young turkeys are still better; their keen eyes and quick motions allow nothing to escape. A member of the Elmira Farmers' Club kept his cabbages entirely free by cayenne pepper.

PAMPHLETS AND CATALOGUES.

THE SHEPHERD'S MANUAL; by Henry Stewart. At the present time there is no more promising branch of rural industry than sheep keeping. The increasing development of woolen manufacture offers an almost unlimited market for wools, both as regards quantity and kind, and the growing appetite for good mutton at home and the constantly enlarging export trade in live sheep and dressed carcasses, furnish an outlet for all the mutton that we can produce. The works upon sheep that are now extant, with a single exception, relate to past and gone facts and experiences, and are out of date and obsolete. The exception is the work now under notice, and which we have examined with much interest. It describes many breeds which have only been brought into existence by skillful and successful crossing during the past few years, and also points out the various districts in which the culture of these different breeds may be made successful in America. It is an American book, written by an American shepherd, who has made the rearing of sheep an especial business for years, and who writes of what he knows from experience. It is plainly and simply written, and is a manual for the man or boy who would keep a few sheep, as well as for those who are extensively engaged in sheep husbandry. A large portion of the book is devoted to the diseases of sheep, and contains not only the treatment of these, but, what is of far greater consequence, the means of preventing them, considering prevention as the best cure. The work before us is a new edition, revised and enlarged, and contains a chapter devoted entirely to a description of the important districts, North, South, East and West, where sheep keeping may be successfully carried on, describing the system and methods followed on the great Western plains and in California and Texas with much particularity. It is, in short, a book that is needed by every one who keeps a few sheep or who has a large flock, as well as by all who may ever own a flock at any time. The price is $1.50, sent post-paid by the American News Co., New York.

CATALOGUE of Michigan State Agricultural College, containing a full description of the objects of the institution, courses of study, names of students etc., and also, in a supplement, the triannual catalogue of the officers and graduates of the college.

Descriptive Catalogue of Fruit and Ornamental Trees and Shrubs of Oak Hill Nurseries, Brenham, Wash. Co., Texas. Also small fruits, Roses and ornamental plants in great variety. This catalogue will interest many of our Northern as well as our Southern readers

TEA CULTURE as a probable American Industry, by William Saunders, Superintendent of Gardens and Grounds, Department of Agriculture, Washington. A pamphlet of 20 pages, in which the author discusses the probable future of the tea plant in this country.

The Hessian Fly. A lecture by Prof. Cook, of Mich. State Agr'l College, sent prepaid by mail for 10c. It imparts information on the above subject, that every farmer in the country ought to possess.

Fourth report of the Montreal Horticultural Society and Fruit Growers' Association of the Province of Quebec, for 1878.

Transactions of the Massachusetts Horticultural Society for 1879—part 1.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address THE RURAL NEW-YORKER,
78 Duane Street, New York City.

SATURDAY, DEC. 6, 1879.

We are having many calls from all parts of the country for electros of our engravings. Months ago we offered to sell them for twelve cents the square inch. Our object in making the price so low was to place before as many interested readers as possible portraits true to nature, that might hasten an appreciation of valuable farm and garden plants. As, however, we are obliged to bear the expenses of the original drawings and engravings — a heavier item of cost than many may suppose— we felt that the Rural New-Yorker should be credited when such cuts were used in other journals. Such credit, however, has not, as a rule, been given, for which reason, and for others which need not be specified, we respectfully decline to sell our original cuts in the future for less than 25 cents per square inch, while we shall require the payment in advance. We cannot send proofs of our engravings to anybody.

When the *size* and *quality* of this journal are considered; its accurate *illustrations* from *nature*; the *standing* of *its* world-renowned *contributors*; its *exclusion* of *untrustworthy* advertisements; its Free Plant and Seed Distributions; its *market* and Special Reports from all parts of our country; its Experiment Grounds; its independence of all merely personal interests, we submit that it is *by far the* Cheapest Country Home Journal in the World. It will be sent from now until Jan., 1881, for Two Dollars.

We would state to the readers and subscribers of the Rural New-Yorker that we would be happy to send them specimen copies, free of charge, in any numbers that they would kindly distribute among their friends, upon receipt of a postal card making the request.

If any of our subscribers do not receive the Rural New-Yorker promptly, they will confer a particular favor by advising us of the fact.

The Rural New-Yorker will be sent from now until January 1st, 1881, for $2.00.

HIGHWAY FENCES.

This subject is attracting considerable attention. What is justice to land-owners, and what to the traveling public? Are existing laws and usages just, or did they grow up under circumstances that seemed to justify them, but which have changed? Do these changes require, or justify, a change in the laws? If so, what? If the farmer does not *himself* need road fences, has society a right to make him build them? If he chooses to "soil" his own cattle, or use his fields that border on the highway for grain fields or meadows, can the public require him to fence such fields along the highway to keep out *their* cattle? Between himself and his neighbor each farmer builds *half* of the line-fence. Can you ask him to build more than half between himself and the public? Can you require him to build any? Has the public any cattle and sheep? If so, should it not own a farm? Or is the whole highway the farm of the public? Each farmer buys (in most States) the highway bordering his farm. If his farm lies on both sides, he buys and *owns the whole road.* The public, for good and sufficient reasons, reserves the right to travel on it. Does it reserve any other right? *Has* it any other that it can reserve? Each farmer not only owns his highway land; but, in most States, pays taxes on it, just as on the rest of his land. Not only that, but a part of his whole tax goes for road improvement. If he "works out" his road tax, it is deducted from his tax total.

For his owning, tax-paying, and working of his own highways, he receives a part of his equivalent every time he drives to town or city over the roads similarly owned and kept in repair by other farmers and property-owners, and in a year he receives his full equivalent. But if the public claims the right to use the highway as pig-pen or cow pasture, or for any other purpose than for travel and the necessary driving of stock, how can the individual farmer get his pay for this use of *his land?*

Take another aspect:—In general, the highways are now fenced. Most of the fences are now made so as to harbor huge snow-drifts in windy stretches of land, that often completely block the highway. Has the public a right to object to this? Has it a right, as one correspondent, himself a farmer, suggests, to compel landowners to build wire fences that will not harbor drifts? or, to give him the right, as another correspondent suggests, and as the N. Y. law actually does, to lay his road-fences flat each fall, rebuild in spring, and commute, to the amount of the actual cost, for his next year's road-tax? Has it a right to *compel* this? But thus to level and rebuild stone-wall or board fence would cost, in labor and damage, ten times the annual road-tax, and to level a hedge is to destroy it.

Take still another aspect:—Suppose all road fences removed, as our correspondent suggests, and the ground cultivated on each side to the ditch that marks the line of actual necessary travel: can law keep the traveling public within those lines in muddy weather, or will men ride and drive on the less muddy turf of the adjoining meadows? Or, in summer, can cattle be driven on the highway without rushing through the grain fields and meadows that tempt them on either side?

These and similar questions are doubtless more easily asked than answered. One thing is certain:—the burden of road-side fencing, and the waste of untilled, uncropped road-side land, are immense. They amount to millions of dollars each year. Has the law a right to perpetuate this burden and this waste, unless both are absolutely necessities?

NATIONAL AGRICULTURAL JOURNALISM.

Probably there is no other agricultural or horticultural journal published whose circulation is more evenly distributed over our entire country than that of the Rural New-Yorker. Our reports, under the department of "Everywhere," show this to our readers, no less than our subscription lists show it to us. The present managers have labored to make this journal more and more *national*, so that, though published in New York, its readers should feel that its comprehensive views were as well adapted to the West and Far West as to the East; as well to the South as to the North. We do not care much for any interests that are so local that they cannot be made to unite with those underlying principles of agriculture which are everywhere the same. Whether we speak of fruits or grains; of grasses or vegetables; of shrubs or trees; of cattle or any other farm stock; of agricultural implements or of methods; of markets, domestic, or literary matters, we address neither individuals, sects, parties, nor States;—we write for all who are interested in the Farm, Garden, Orchard and Country-Home — *Everywhere.* We print our paper in New York because it offers to enterprise facilities offered by no other city in the country. But our contributors live in England, in Canada, in other foreign countries, and in every State in the United States. If persons, interested in so doing, would examine wherein sectional farm journals are peculiarly adapted to the North, South, East, or West, it would be found, we think, that one column weekly would suffice to present, in full, the agricultural methods *peculiar* to that section. County and State journals are valuable to residents, as they present facts which are interesting from associations, or an intimate knowledge of people and events. But those who would stand foremost in the art and science of agriculture, must free themselves of every vestige of sectional prejudice; must study the world's progress, and stand ready to seize upon that which, upon their own farms, may enable them to produce more with the same, or a less, amount of labor.

SELF-SUSTAINING EXPERIMENT GROUNDS.

We have been reading, in the Trans. of the Wisconsin State Agricultural Society, a discussion as to whether State Experiment Farms should be expected to maintain themselves from the products of the experiments. The object of an experiment is, as might be supposed, to discover something not previously known, or, at least, to prove something respecting which doubts previously existed. The past fall we have sown over twenty kinds of wheat. We do not *believe* that there is *one* of them that will *pay* us as well as Clawson, which we have cultivated for years. But we cannot *know* this without comparative tests. And these comparative tests, made in a small way necessarily, and for the most part by hand-work, let the harvest be what it may, could not possibly pay for the time and expense of conducting them. We have tried many different kinds of spring wheats, all of which were failures. Our "cultivation" of wheat was a failure, though it cost us a good deal of time and puttering. Last season an acre of our best land was prepared with the greatest care for new vegetables, not one of which proved to be equal to better-known sorts. Another plot was trenched two feet deep, and the soil loaded with fine, rich, old manure, and planted to mangels. A fourteen-pound mangel was the heaviest of the yield, while the yield of another plot, prepared with ordinary care, was better. We might multiply such instances, to show that we learn nothing, except what failures teach, from most of the experiments we make, and the loss attending them is such that they cannot be conducted if a *money*-profit is to be counted in the results. Yet it is by faithful and intelligent experiment alone that solid advances are to be made, and we have, therefore, little to expect from those experiment stations which are fettered by the condition that they must prove self-sustaining.

The farmers of the country may be divided into two classes, according to age and experience,—the old and the young. While there are many exceptions, as to each class, it must be admitted that the old are too prone to continue old ways and methods, and the young are too ready to disapprove of the old, and risk their interests on what is comparatively new. The true policy is, to cling to any custom until something better is learned; but to be sure, while clinging, to be on the alert for any improvement. Much of the life and interest of farming arises from its being a progressive work. Many important truths have been developed during the last few years, causing important changes in the means and methods of agriculture. Those who disregard these developments must, of necessity, fail to compete successfully with producers who judiciously adopt what is good in the new, and hold to that only which is good in the old. A plain, middle-aged farmer tells us that, in his community, the younger men are succeeding much better than the older, because the former are using more of the fruits of recent experience.

Mr. Robinson, the editor of the London Garden, referring to the several articles concerning the distinctions between good and scientific farming, that have appeared in these columns of late, writes as follows:—

"I was going to write to you some time ago, in sympathy with a man who held that good farming was scientific farming. I am no farmer, but I am often annoyed by this misuse of words, and such an expression as right theoretically and wrong practically is to me nonsense. I am sure such expressions are very much against progress in our art, and in all others, and I know they are wrong scientifically. They are declared to be so by Herbert Spencer, in one of his books. No man can be right in theory and wrong in practice, or *vice versa.* The real question is, right or wrong."

Our trees have never been so much infested with the bark louse as during the past two years, and—what is something unusual—the thriftiest trees are as much infested with them as those which have made little growth. We have been experimenting carefully with kerosene and other washes, in the hope of finding a remedy. In reply to a question, Mr. Charles Downing writes us as follows:—

"I have not had any experience with kerosene, and would not like to risk it. I have found potash, dissolved in water, a good remedy,—one pound of potash to one-and-a-half gallon of water—put on with a paint brush; and now is a good time, when the leaves are off, or any time before the buds begin to swell in spring. The trees should be washed as far up as there are any insects, even to the ends of the branches."

We find that several of our readers, accepting our suggestion, are working to produce a variety of tomato that shall keep better than any at present known in the market. One of our friends in Ohio has a cross between the Acme and Trophy, that will keep well for from 15 to 20 days. We ourselves, as before stated, have been *selecting* seeds for two or three years with this object solely in view. In another season we hope to be able to report our progress. In breeding for a better-keeping sort, we should never lose sight of productiveness, and that quality, so valuable in the Acme, of ripening about the stem.

BREVITIES.

The Plymouth Rock among fowls is just about what the Concord is among grapes.

Subscribers will now please send in their reports for corn premiums as soon as possible.

The Prairie Farmer says that "so far the Illinois Industrial University has only been playing with agriculture"!

We have received from Mr. John S. Collins, of Moorestown, one of the Kieffer "hybrid" pear trees, the fruit of which was illustrated in a late Rural.

Among our collection of Raspberries there are two sorts which hold their leaves still, for the most part, green One is the Gregg, the other the Cuthbert. Nov. 29.

Sutton's Magnum Bonum potato has proven so productive and so disease-resisting in England and Ireland that we propose importing a sufficient quantity another season to give it a trial here.

Those intending to make new strawberry plantations in the spring, cannot do better than to plow or spade up the soil *now.* The grubs of May Beetles, so destructive to this plant, will thus be exposed to frosts and killed.

Our next original portrait will be that of Ex-Gov. Furnas, of Nebraska, who, as we are informed, has devoted the greater part of his life to the interests of pomology in the Far West, and the greater part of his fortune as well.

We have twice tried to raise plants from Rhus glabra *var.* laciniata. Not less than 50 seeds were planted, but all failed to germinate. It would be interesting to know if seedlings from it would resemble most the variety or the species.

We have been eating some of our spring Plymouth Rocks and Black Cochins. All decided that the meat of the latter is sweeter, more juicy, and more tender. But there is more breast meat in the Plymouth Rocks of the same age. They mature earlier and lay earlier.

We have no longer any doubt as to the identity of Henrietta and Belle de Fontenay. The leaves dry up and adhere precisely in the same way. The petioles cling in the same way. Canes of the same stage of maturity assume the same color, etc. There are certain characteristics which, at this season, serve better than at any other to identify varieties.

In pruning trees, all stems half an inch or more in diameter, should be covered with some water-proof substance like grafting-wax or shellac, of the consistency of cream. The bark and outer wood will thus be preserved and the wound will in a season or so be covered with new bark. If this precaution be not taken, the end of the branch will decay from exposure to wind, rain, heat and cold.

It is a mistake, that some of our contemporaries have fallen into, to suppose that ice in cellars will mitigate frost, or in any degree serve to prevent plants from freezing. Tubs or pails of water will exert such an influence. The heat is given off during the *process* of freezing only. If the temperature of a cellar is above 32°, ice would serve to make the air colder in being converted from solid to liquid matter.

Within the past week we have received musk-melon seeds from Mr. Isaac Alter, of Lake Co., Cal.; sample of wheat from J. Millen, Topeka, Kansas; an apple from Mr. Charles Downing, which is being engraved; several new shrubs and trees from the Kissena Nurseries, of Flushing, Long Island; half a dozen packages of corn starch from G. Gilbert, of Buffalo, N. Y.; several potatoes, one fine specimen of Blount's corn, and several specimens of grasses for name—all of which will receive due attention in due time.

In consideration of the fact that the Holidays are close at hand, we suggest that our readers send to us for one of our *Premium Lists*, wherein over 100 articles are described suitable for holiday presents. We do not *sell* any of these articles, but would be very happy to *exchange* them for subscribers. We should much like to have these mementoes in the homes of our readers and (by the way!) the subscribers' names upon our books. Again, "by the way"—and this to our *wealthy* patrons (!):—Would it not be a capital idea, instead of purchasing perishable presents, to subscribe to the Rural for a few hundreds of the needy farmers and gardeners and fruit-growers living about you!

It is a pity that there is no word in common use that comprises both agriculture and horticulture. If we speak of the Rural as an agricultural or farm journal, we feel we do not do it justice, since it gives as much attention to horticulture as to agriculture, and the constant use of both words is out of the question. It does not seem that the word terraculture, though the right one by derivation, will ever come into general use. To speak of terracultural colleges, stations, and newspapers, would sound funny enough. Horticulture is properly garden culture, but it is now accepted as including fruit culture and flowers, shrub and ornamental tree culture also. We want one popular word that shall comprise everything that is meant by both agriculture and horticulture.

Mr. Charles Downing says of the Winter Nelis, engravings of which from nature appear on page 767, as follows: "It holds in our estimation, nearly the same rank among winter pears that the Seckel does among the autumnal varieties. It is a very hardy and thrifty tree and bears regular crops of pears which always ripen well. In perfection in December and keeps till the middle of January." The specimen from which our engraving was made, was grown in California and purchased in Washington Market this city. It was by no means the finest specimen we could find, as it was selected with reference to show average rather than the maximum size. This pear sold readily for the high price of 60 cents a dozen.

For Women.

CONDUCTED BY MISS FAITH RIPLEY.

THE HIGHWAY COW.

THE hue of her hide was a dusky brown,
Her body was lean and her neck was slim,
One horn turned up and the other down,
She was keen of vision and long of limb;
With a Roman nose and a short stump tail,
And ribs like the hoops of a home-made pail.

Many a mark did her old body wear;
She had been a target for all things known;
On many a scar the dusky hair
Would grow no more where once it had grown:
Many a passionate, parting shot
Had left upon her a lasting spot.

Many and many a well-aimed stone,
Many a brickbat of goodly size,
And many a cudgel, swiftly thrown,
Had brought the tears to her bovine eyes;
Or had bounded off from her bony back,
With a noise like the sound of a rifle crack.

Many a day had she passed in the pound,
For helping herself to her neighbor's corn.
Many a cowardly cur and hound
Had been transfixed on her crumpled horn;
Many a tea-pot and old tin pail
Had the farmer boys tied to her time-worn tail.

Old Deacon Gray was a pious man,
Though sometimes tempted to be profane,
When many a weary mile he ran
To drive her out of his growing grain.
Sharp pranks she used to play
To get her fill and to get away.

She knew when the deacon went to town,
She wisely watched him when he went by:
He never passed her without a frown
And an evil gleam in each angry eye;
He would crack his whip in a surly way
And drive along in his "one-horse shay."

Then at his homestead she loved to call,
Lifting his bars with her crumpled horn;
Nimbly scaling his garden wall,
Helping herself to his standing corn,
Eating his cabbages one by one,
Hurrying home when her work was done.

Often the deacon homeward came,
Humming a hymn from the house of prayer;
His hopeful heart in a tranquil frame,
His soul as calm as the evening air,
His forehead as smooth as a well-worn plow,
To find in his garden that highway cow.

His human passions were quick to rise,
And striding forth with a savage cry,
With fury blazing from both his eyes,
As lightnings flash in a summer sky;
Redder and redder his face would grow,
And after the creature he would go.

Over the garden round and round,
Breaking his pear and apple trees;
Trampling his melons into the ground,
Overturning his hives of bees;
Leaving him angry and badly stung,
Wishing the old cow's neck was wrung.

The mosses grow on the garden wall,
The years went by with their work and play,
The boys of the village grew strong and tall,
And the gray-haired farmers passed away
One by one as the red leaves fall,
But the highway cow outlived them all.

All earthly creatures must have their day,
And some must have their months and years;
Some in dying will long delay.
There is a climax to all careers,
And the highway cow at last was slain
In running a race with the railway train.

All into pieces at last she went,
Just like the savings banks when they fail;
Out of the world she was swiftly sent,
Little was left but her old stumpy tail.
The farmers' cornfields and gardens now
Are haunted no more by the highway cow.

THE WOMAN'S CLUB.

HIS MOTHER.

IT really seems too bad to have the subject of mothers-in-law dropped too soon, now that it has been revived after so long a rest, so I have decided to prolong the strain; besides, I really have something to say on the subject.

I desire to express my sympathy for the writer of the first article on this subject—the mother-in-law, I mean, who evidently wrote from the depths of a full heart. It is said that trials sometimes make us selfish; that is, if we hold them too closely before our eyes, they blind us to the trials of others, and I have thought, from the bitter allusions to "his mother," that such has been the case with the writer referred to, or, at least, that she has had only a one-sided experience, and that if she has sons, they are still unmarried. Old Fea's song in the fairy tale,

"Oh, my son's my son till he gets him a wife,
But my daughter's my daughter all her life."

like most quaint old sayings, is really true. In fact, a daughter, after marriage, is much more faithful to her mother than a son is to his. This is in the very nature of things, for a woman is more steadfast in her affections than a man is, or, at least, a woman's mind is never so completely taken up with the new interests that she forgets the old. This very fealty, unwisely displayed, may be the cause of much of the trouble between the mother and son-in-law. But it is not my purpose to discuss this side of the question, but simply to present some facts in behalf of "his mother." I ask, would not any mother consider it a far greater trial to feel the tender love of her child for her growing into indifference, his interest withdrawn from her, than to know that she is unappreciated by one who is not her own? and, indeed, can a mother-in-law expect what is withheld from a mother? Ah! there is greater void made in a mother's heart by the marriage of a son than by the marriage of a daughter. The daughter has only added to her care and affections; the son has transferred his. To be sure, the separation may be as sad and the presence of the daughter more missed than the son's, but there is a separation more complete than distance can make and a presence in which one feels more forsaken than in absence.

The bride might be held somewhat responsible for this, but I know that she is young and interesting, while "his mother" is not; so I will not hint that she may not be, even at this most interesting time of her life, wholly free from the great failing of the human race, selfishness, but will speak of one fault which is often a great source of annoyance to "his mother," and which, I believe, causes much of the unpleasant feeling between families thus joined, especially between mother and son-in-law. It is this:—From childhood up, the daughter, now the young wife, has been accustomed to confide to her mother everything, which is just as it should be, and cannot be too highly recommended; but now matters are somewhat changed—there is a new home. To be sure, a daughter may confide much to her mother, and gain greatly thereby, but in every home there are a hundred little circumstances occurring which should be sacred to that home, and should never be whispered to one outside its threshold. A man would never think of repeating them—we must give him this much credit—but the wife pours them into her mother's ear, with all that she knows or can find out about her husband's family. Why, tell her mother! of course, she always tells her mother everything! It cannot be expected of the most exemplary son-in-law, one that gives to his mother-in-law all due respect and love, that he will entertain this same feeling of confidence. It is not natural. It is impossible. He will always feel that there should be a reserve of confidence and a failure to respect and hold inviolate this feeling will arouse unpleasantness, and, to "his mother," who, of course, can hold none of this "kindred" feeling, this invasion of family secrets is a trial almost unendurable.

This vexed question has more than one side, and I have not begun to represent this side; but my article has grown longer already than I had intended it to be, so I hasten to close. Lecture the men on their duties as sons-in-law—the most of them deserve it; it will do the best of them no harm, and it may set them thinking—but spare "his mother" your bitter references. Her son is none too faithful to her at the best; she deserves your sympathy far more than your sarcasm. No doubt, in order that any degree of harmony shall prevail between families brought together by intermarriage, there must be a great amount of forbearance exercised by all parties, and, generally speaking, upon no one does there fall a heavier share than upon "his mother," and by no one is it borne more faithfully or cheerfully.

ONE INTERESTED IN BOTH SIDES OF THE QUESTION.

NOW-A-DAYS.

YES, there is a world of difference between doing housework now, and twenty-five or fifty years ago. Whether folks are happier is a doubtful question; that they are not as healthy, is certain. Women have a harder time than they used to have, notwithstanding all the conveniences, and patent rights, and labor saving inventions. I do not wonder at all, that they get all tired out, and are feeble and sickly, and it is strange that men do not see it, but I suppose people have to follow the fashions, even if it does make martyrs of them. Now when I commenced housekeeping, I expected to work hard; but my husband and I were young, strong and healthy. I was married Thanksgiving time, and it was Thursday night. We had a real old fashioned wedding, not such flunkin affairs as weddings are now-a-days. We stood up in the square room, and the minister tied the knot, and made a short prayer; then they kissed the bride, and such hosts of introductions as they had. I got used to my new name before supper was ready. All the people in the neighborhood were there. There was no aristocracy in town in those days. Everybody who behaved well, and was industrious, was respectable. We had wine passed around to the company, and everybody took a sip of it. For supper, there was roast turkey, chicken pie, plum pudding, apple pie, mince pie, pumpkin pie and custard pie. For vegetables, we had potatoes, turnips and squash, and there were sauces of all kinds, and tea and coffee. It was a good, substantial old fashioned supper, worth eating too, for my mother was a first-rate cook, and taught her girls to cook, also. After supper they cleared off the table in a jiffy, and we had a dance, no waltzing, or Germans, but a respectable dance. I led the first figure with my father-in-law, and my mother danced with the bridegroom, and my father, and his mother, danced together; we never broke up till two o'clock in the morning; but I was going to tell about keeping house, but ran off the track a little. The next morning we went to our home, it was a new house and there were only a kitchen, pantry and bed-room finished off. My setting out had all been moved over there the day before Thanksgiving, and so all we had to do was to walk right in and take possession. My brother went over before light and built a good fire, so it would be warm, and I do not believe there ever was a happier bride than I was, in my new home. Oh, what lots of work I did that winter! I spun and wove over seventy yards of linen; my father gave me the flax; and my house was as neat as a new pin. We used to go out for evening visits, or have company at home almost every night. He cut and hewed the timber for a new barn, and drew almost two thousand spruce logs down to the saw-mill. When I got dressed in the morning it was for all day; I did not spend two or three hours every day changing my clothes; if company came I was glad to see them, and set such victuals before them as I ate myself. We lived as well as our neighbors, for it did not do in those days to lay out all a man could earn in nicknacks, and if people now-a-days could be more economical they would be better off, and not have so many failures. The fact is, now-a-days, everybody is too extravagant. They spend too much on dress, on food, and in keeping up style. It will never do, never. A young man cannot get married now-a-days unless he has a thousand or two dollars to start with, he cannot afford it. A girl would turn up her nose at a nice, strong fellow, if he had not the stamps, and could not dash out in style; and unless a girl can dress and be right in fashion, she stands no chance to get the first offer. No matter how good and sweet she is, if she is not furbelowed out with feathers and flowers, and can put on airs, and drawl out her words, she can't get a beau. Every thing is changed now-a-days, and I do not believe it is much for the better either. It does not seem to me that people can be as happy and contented as they used to be. They can never be satisfied with their belongings. They want something more. Somebody dresses smarter, has nicer furniture, a better team, and so they are discontented and uneasy.

Talk about progressing!—it may be in some things, but take it all in all, the world is, to my thinking, no better than it should be, now. Common sense is done up in a napkin, now-a-days, and buried out of sight. Don't you think so?

GRANDMOTHER.

A "PURITANIC" VIEW OF "IN FOLLY'S NET."

DEAR MISS RIPLEY:—Will you kindly allow me a little space in your department for criticism or fault-finding, whichever it may be? It is not of yourself nor of the conduct of your columns, and the Dear Old RURAL in its completeness is usually so faultless, that it is with great hesitancy my pencil traces words of criticism on any matter printed in its ample pages. But as the leading story "In Folly's Net," develops from week to week, the impression grows upon me that if the Editor had known the end from the beginning, he would scarcely have given it a place in his columns. Surely, stories so full of emotion and romance, and whose counterparts are never found in real life, are not the best and safest reading for the young. Young people, and children almost without exception, read the *story* in the paper, whether they read the more solid parts or not; romance and fiction have magic charms for the young. Then how important that only pure, wholesome, mental food be placed before them, food which is conditioned to a healthy growth, and not stimulants which excite, while they do not nourish.

Life is a *reality*, and the sooner young people come to realize this the better it is for them. The highly wrought imaginative doings of lords and ladies in high life, have little in common with the Republican simplicity of young men and women in America for whom the RURAL is printed, and whose lives are more or less influenced and moulded by every weekly issue. False notions creep into the heads of silly young girls through reading romantic tales, which not unfrequently result in much harm. I think you will agree with me, that a large proportion of newspaper stories are ill no-wise beneficial—they do not tend to cultivate the mind or improve the heart, they simply excite the imagination. And while I would not place the story under discussion in the category of "positively pernicious," allow me to say in all candor, that in my humble opinion, its place might have been filled with something having a better influence—some pure, sweet tale of domestic life—or record of moral heroism and sacrifice for the good of others worthy of emulation. Possibly I may be Puritanic in my notions, but there is so much of wrong, and the path seems so short and easy to travel, and the boundary so indistinctly defined between the good and the bad, that it becomes every lover of right to stand like a rock in defense of the truth. Forgive me if I have been unjust in defense of the truth. Forgive me if I have been unjust in my criticism for the RURAL, I know it always aims to be on the right side, and that it exerts a vast influence for good.

MRS. W. C. G.

MISAPPLIED RIDICULE.

THE Massachusetts Legislature passed an act last winter permitting women to vote for school committees (which are elective by popular ballot in that State) on the same terms as men as to age, residence and registration, and on condition of having paid taxes within two years upon separate, real or personal property, or of paying a poll tax amounting to some dollars before registering. Under these circumstances a thousand women have been admitted to register in the city of Boston for the purpose of voting for members of the school committee at an approaching municipal election. The paucity of this number—the total male registration being more than fifty thousand—is made a pretext for ridicule by our neighbor, the Evening Post, which we think is undeserved. It strikes us, on the contrary, that it is a pretty formidable expression of feminine desire for suffrage when so many as a thousand women will go to equal trouble and expense to vote for a single class of officers which the fifty thousand men incur for the privilege of voting for a vast variety ranging in dignity from Presidential electors down. Suppose that a special taxpaying and registering were necessary to entitle men to vote for the school committee in Boston, what portion of the fifty thousand would volunteer the expense and trouble of qualifying for that purpose? Not a very great one, we imagine. Besides, the novelty of the experiment, the sensitiveness of women to publicity and their usually scanty control of money with which to pay poll taxes for a purpose disapproved in many instances by their husbands or other male connections, all must be taken into consideration. We feel far from ridiculing this female registration in Boston. It is the most respectable demonstration of desire for suffrage ever made by women anywhere in the country, both from the number and from the character of those engaged in it, who comprise some of the most staid matrons in the city, including several hundred property owners to an amount greatly surpassing the average of the male voters.

AUSTRALIA is the servant-girl's paradise. A lady in Melbourne, who had advertised for domestic aid, received a call from a pretty maid, with unexceptionable references, a pleasing manner, and a willing disposition. The lady was charmed and engaged her on the spot. "But I have always had a whole day's leave of absence every fortnight," the young girl remarked, pausing on the threshold, "and an evening a week besides." "You shall not be deprived of them," was the encouraging reply. "And this is a very lonely place, ma'am," the girl rejoined, "and I could not come home by myself. Would the master mind coming for me?" The lady hesitated a moment, but as a good girl is not to be picked up every day, she finally consented; and when her husband returned, she informed him that he would have to refuse all invitations for two nights in one week and one in the other in order to go after the new help.

CORRESPONDENTS' CORNER.

WHO is the author of "Prue and I," and is it a nice sort of a story? L. A. D

Indianapolis, Ind.

ANS.—Geo. Wm. Curtis. It is not a story, but a series of sketches of men and manners.

How shall I whiten my teeth? Is Sozodont good for that purpose? GERTRUDE.

ANS.—Do not try to whiten your teeth. If they are disfigured with "tartar" use prepared chalk and a small stick to clean them. All prepared washes are injurious to the teeth.

WILL you tell me who the father of the present Prince Napoleon was? A SUBSCRIBER.

Seabrook, N. J.

ANS.—King Jerome of Westphalia, whose first wife was Betsy Patterson, of Baltimore, and whose second wife—mother of the present Prince Napoleon—was Princess Catharine of Wurtemburg.

WE never learned until this autumn, that artichokes made such excellent soup, quite as good in fact, as salsify or vegetable oysters, and nearly as good as genuine oysters. The artichokes are first pared, then sliced, and the soup is made precisely as from vegetable oysters. MRS. W. C. G.

CAN you direct me to a reliable firm in New York, who make a specialty of new designs in floor coverings? MRS. L. B. D.

Lincoln, Neb.

ANS.—Messrs. Dobson & Co., Fourteenth Street, are manufacturers, and their assortment of carpets, rugs, mats, etc., is second to none in beauty and variety of design, and in excellence of material.

WHAT will be a suitable Christmas gift for a young girl who is fond of pictures? I cannot afford to pay more than three or four dollars for the gift. LUCY S. TATHAM.

Orange Co., N. Y.

ANS.—Imported photographs 18x20 inches, and so exquisitely fine as to look like engravings, can be bought for $1.75. A beautiful frame of natural wood with a French plate glass will cost $2.25, additional. Less elegant photographs, same size can be had for 75c. and $1 00.

I WANT to tell the ladies that if any of them have a fever sore which they want to get rid of, it can be done most effectually either by applying pulverized alum, or bathing it in water in which carbonate of soda has been dissolved. Some cannot use glycerine without it bringing out a crop of pimples, to all such I would recommend Vaseline. My own skin is so delicate that glycerine always acts on it as a violent irritant, and yet I can and do use Vaseline without any but the best effects. LINDA BROWN.

MY DEAR MISS RIPLEY:—At this season of the year, when making over is the order of the day, perhaps some of your readers may like the following directions for washing black cashmere or other dress goods:

Prepare the water, by putting in so much borax as will make it quite slippery. Wash the goods, using soap on the dirty spots; squeeze, but do not wring, and rinse in *very* blue water. Hang up the pieces until they stop dripping, then roll in clean cloths, until somewhat dry. Iron on the wrong side, being careful to iron until the goods are perfectly dry. Goods that are quite rusty can be made to look fresh by this process.

A very nice Christmas present for one's husband or brother,—or almost any one indeed,—is a pair of crocheted bath towels. They are made of No. 8 knitting cotton, and are done on a long needle, the square "Afghan" or "princess" stitch being used. One hundred and fifty stitches make an excellent width. When long enough, eight rows of loops (five stitches to each loop,) are crocheted on each end and a fringe knotted into the last row of loops. The towels are extremely pretty, and more satisfactory than any I have used.

Very truly yours, L. S. H.

Ithaca, N. Y.

Literary Miscellany.

CHAPTER XXII.

ACCUSED.

"ARE you going to Blair Gates this morning, Florie?" said Lord Sholto to his wife, as they rose from breakfast the day but one after Mr. Blair's funeral. "I wish you could get that poor girl to come over to us; she will not quickly get well or strong if she remains there."

"She is going to Edinburgh to stay with her Aunt Margaret, as soon as she is well enough to undertake the journey," said Lady Sholto, with a glance at her brother. "The complete change of air and scene will do her most good, she thinks. She was much better last night, Collins sent me word."

"She will improve rapidly as soon as she gets

away from these parts," said his lordship. "Well, her probation was not a very long one, poor child! I wonder how the unfortunate man came by his death?" he added, musingly. "I should not imagine he had done it himself; he was the last man in the world to commit suicide, according to my judgment."

"Some accident, perhaps," said Captain Murray, suggestively.

"Or some of the household who owed him a grudge," said Lord Sholto. "Although it is an awful thing to suspect any one of murder!"

"Awful, indeed!" said Lady Sholto, shuddering a little, as she slipped her hand through her husband's arm. "It seems very dreadful to think of any one dying so unregretted!"

"Poor fellow! he had not time to make many friends in this part of the world," said Lord Sholto. "If he has any, they are in Australia. His brother's widow is a cold, hard woman, who, it seems, has not forgiven him for inheriting the property which she thinks was hers by right."

"The inquest was very unsatisfactory, I think," said Captain Murray, meditatively. "They seemed to be able to discover nothing but that he was poisoned by arsenic; how administered, or when, it seemed impossible to ascertain."

"Dr. Mackenzie laid much more stress than was necessary on Jean's absence," said Lord Sholto. "Very few women but would have sunk under such a blow; and that cut on her forehead must have given her great pain."

"She was delirious for a day or two," said his wife; "and then her weakness was so extreme, it would have killed her to appear at that inquest."

"Are you going there this morning, Florie?" said Ida. "You have not answered the question."

"Yes; will you come?" said Lady Sholto. "I will take you with pleasure; but as I am going in the pony carriage, there is no room for Algernon."

"Ida, you promised to walk with me," said Captain Murray, quickly. "Have you forgotten?"

"No, of course not," said Miss Crawford, smiling. "You will be very cold driving in the pony carriage, Flo."

"I shall wrap up well," said Lady Sholto, laughingly. "Are you coming, Ida?"

"I suppose I must not?" Miss Crawford answered, smiling, with a glance at her *fiance*. "Algie says I am going with him."

"Getting her into training, Murray," said Lord Sholto, gaily. "What time shall I order the ponies, Florie?".

"In half an hour, dear," said her ladyship, and as she spoke she crossed the room and went to Lord Ivor's side where he stood near the window.

"Will you come with me, Archie?" she said, smiling.

"May I? Would it be right? You know what I would give to see her, Flo, but I cannot let people talk of her, poor child!" he said, eagerly.

"You can drive me there, and if she is well enough to see you, I think as an old friend you might be admitted," said Lady Sholto her affection for her brother, and her pity for his anxiety about Jean, leading her to commit a decided breach of *les convenances*, and Lord Ivor's eyes brightened a little as his sister left him to prepare for the drive.

The news of Mr. Blair's death had come upon the Earl like a thunderclap, and had for a time overwhelmed him; then the blood had rushed quickly through his veins, his heart had beat rapidly, furiously, joyfully. Mr. Blair's death meant freedom for Jean, and freedom for Jean meant happiness to them both. And ah! what happiness would that be! What a feast "of joy after its first course of misery!"

It was so horrible, and he felt it so, to rejoice at a death, especially one so sudden and terrible; but he could not still the rejoicings. He had gone to his room when the news had come to them, and in the solitude and stillness he had tried not to rejoice—he had put his head on his hands, and had thought of that sudden ending to a life which should have been great and noble and he had tried to be sorry for the man who had injured him so terribly; but, strive as he might, there was a tide of suffocating joy welling up in his heart which could not be kept back; which would rise in spite of all his efforts, when he thought that Jean was free, and that their suffering was over.

How they had suffered! Of Jean's suffering he could not doubt; its physical effects upon her were visible enough; his poor, drooping, pale lily, battered and beaten down by the storm which had passed over her, she would win back her roses when they were together again; win back, perhaps, those old bright smiles. Ah! no, never win back quite the old girlish sunshine; never the old mirthful smiles and bright *espiegleries*—the storm had been too heavy for that. The girl had become a woman, and her womanhood had dawned in darkness; but there was a rainbow in her sky now.

Yes, she had suffered—suffered as any loving woman will suffer when she thinks that through her folly she has brought a heavy sorrow on her dearest one; but had her suffering equalled his? Ah! no! his had been the anguish of a strong man who sees his dearest earthly treasure stolen from his very arms; who sees the cup of joy struck down when his lips had already tasted its nectar; and he had been forced to stand still under the blow, and let the storm beat upon him as it did upon his darling, knowing that he was powerless to shelter her from the tempest.

Those had been terrible weeks which had elapsed between that October day when he had said farewell to his love and his hopes in Lord Sholto's study, and that morning early in the year when the news of Mr. Blair's death had been brought to him; and now, in the reaction of his joy and his relief, he shuddered at the thought of the awful blackness of despair which had shadowed his life. Again he seemed to pass through those sleepless nights of yearning and anguish, those long, long days of sullen gloom, broken by sudden outcries for revenge, of a maddening thirst for vengeance on the man who had so cruelly avenged himself for a boyish ill-will during those days he had become haggard, worn, weary, morose and hopeless; he had felt his life wrecked, his career blighted, his ambition dead within him.

But now, all that was changed, hope relighted in his breast, ambition flamed up afresh. Jean had always so rejoiced in his political successes, and the love he bore for Jean need no longer be crushed and stifled; it might have free course now and they would be so happy—happier than they had ever been—happier than they ever would have been, if the trouble had never been, for they knew now what misery was, and the knowledge would but make them prize the happiness more.

He turned away from the window when his sister left him, and went out into the hall to throw on his great fur-lined coat. There was a light in his gray eyes which had been a stranger there for many weeks past, and there was a new, sweet music in his voice, as he thanked the servant who assisted him on with the overcoat, which even the footman could not but notice.

Lady Sholto, coming down in her velvet and furs, looked at the tall, graceful figure with a smile in her blue eyes. It made her happy to see her brother thus, for they had been very anxious about him lately—Lord Sholto and herself. But now it was his old self returning—the gray eyes were bright, the lines in his face were smoothed out the gold-touched fair hair was thrown back from a serene and cloudless brow.

"Are you ready, Florie?" he said, in his pleasant voice. "I hope you are well wrapped up, dear; the wind is very keen."

He put her carefully into the carriage, and drew the fur rugs round her before he got in himself; then he took the reins from the groom, gave the ponies their heads, and they started gaily.

It was a glorious January morning. The year had been ushered in by hard frost and sunshine, and there was a crisp, pleasant coldness in the air; a bright blue sky overhead, and the sunbeams shining on the trees of the park were clothing the branches with myriads of diamonds, and every blade of grass was sparkling with hoar-frost.

"What a glorious morning!" said the Earl, as they drove on. "It makes one happy to live!"

"And yet what a melancholy Jacques you have been lately, Archie! You said that to live and to suffer were synonymous."

"So they have been lately," he said, with a half smile. "I hardly can tell now how I lived through it."

"Poor fellow!"

"And that poor child!" he went on, in a moment. "The night we were at that ball, I went to her. I saw her leave the room, and I followed her. She looked so terribly ill and miserable, and she said she was longing to die. It almost drove me mad, Florence. I could have taken her from him then. I should have done so had I loved her less."

"Poor Jeanie!" sighed Lady Sholto. "Well, happier days are coming, Archie."

"Yes, thank Heaven!"

They drove on rapidly, slackening the ponies' speed as they entered the Blair Gates grounds. Half-way up the avenue a servant met them—a maid-servant, who had run down to meet them, with her face pale with terror, her eyes streaming with tears.

The Earl pulled up, his own face growing white with dread, as the fear of some new misfortune struck upon his heart.

"Oh, my lady!" sobbed the servant, in answer to Lady Sholto's agitated question, "do you know what you are saying? Oh, it is dreadful!"

"What is it?" said the Earl, hoarsely.

"They are saying that they are going to arrest Mrs. Blair," said the girl, piteously.

"Arrest Mrs. Blair! You are crazy!" said Lord Ivor, staring at her with incredulous horror in his eyes. "Arrest her! What for?"

"For the murder of her husband. They say that she poisoned him."

Lady Sholto uttered a little cry of pain, and sank back trembling, and covering her face with her hands. The Earl sat, with incredulous horror deepening in his face, uttering not a word.

"They say she hated him!" continued the woman, through her sobs. "Jean had been kind to her, and in her calamity she was faithful. "They say she hated him, and that she—poisoned him!"

A laugh broke from the Earl—a short laugh, bitter and mocking.

"Poisoned him!—Jean!" he said. "Fools and madmen!"

That was all; but in the next moment, as he urged the ponies on, Lady Sholto saw that her brother's face was white as death, and stern as the grave itself.

In a few moments they reached the house; the hall-door was thrown open, and a group of frightened servants were gathered round—the men flushed and excited, the women pale and trembling. A man came hastily down the broad marble steps and stood at the ponies' heads; the Earl sprang out, gave his hand to his sister to help her out, and as they went up the steps together, he held her fingers close in a clasp which hurt her in its unconscious vehemence.

In a minute they were among the group in the great hall, who parted to let them enter, and the steward of Blair Gates came hurriedly forward.

"Thank Heaven! your lordship is here," he said, huskily. "This is a terrible business!"

Before the Earl replied, he put his sister into a chair. She was faint and trembling with terror, and stooping over her, he said a few reassuring words; then he turned to the steward calmly:

"What is all this, Mr. Freeman?"

Hastily the man explained; Mrs. Fergus Blair, sister-in-law of the dead man, had arrived; she had long interviews with the doctors and lawyers; the death by poison had been proved; and to one person only did suspicion—nay more, suspicion supported by proof—point, to the wife of the dead man. Words which had been overheard, passionate threats and menaces, the doctors' suspicions, increased by Jean's awful terror at the death-bed, by her passionate refusal to be present at the inquest to answer any questions, all these things had told against her; she was to be arrested that morning.

"I expect them here every moment, my lord," added the man, with great drops of water standing in his cold, blue eyes. Man of business though he was, he could not but feel for the poor girl's terrible position. "What is to be done?"

"Where is she?" said the Earl, briefly.

"In her own apartments, my lord. She knows nothing. It will kill her."

"Who is to tell her?" said the Earl, growing white to his lips—white with a terrible pallor. "She must be told; it would indeed kill her to let the blow fall suddenly."

"No one dare tell her, my lord; Mrs. Collins is in great distress," said Freeman, sorrowfully. "Oh! my lord, it will kill her!"

The same thought was in Lord Ivor's heart, but he could not give it utterance. In mute pain, stunned with the blow which had fallen upon him—striking through her he loved—he stood for a few moments motionless,

"Florence, can you do it?" he said, at last, bending his head down to his sister where she shivered in the great arm chair.

"Oh! Archie, I cannot!" said Lady Sholto, faintly; and her brother saw that it was not a selfish dislike to trouble, but a physical inability which prompted her words.

The gray pallor deepened on the Earl's face as he spoke again:

"I must do it, then," he said, in a voice strained and broken with the intensity of his pain. "How shall I find the strength—where shall I get the courage to break her heart?"

"They are coming—they are coming!" said a voice from the group of startled maids, and Lord Ivor started.

"Florence, let me take you from here," he said, touching his sister's arm; and as she rose, he led her into one of the sitting-rooms, and called the servant who had met them in the avenue, leaving Lady Sholto to her care. As he turned to leave the room, Florence sprang up and threw her arms round him.

"Oh! Archie—what can I do?" she sobbed.

He bent his head over her, and his lips quivered with pain.

"What can you do?" he repeated, gently. "Poor child—nothing but pray for her—pray for me—pray that before they try her for this fancied crime, Heaven may be merciful and take her from her woe."

As he spoke, he put her gently from his arms and placed her in a chair; then, turning slowly, left the room on his fearful mission.

Men have stood bravely before a cannon's mouth ere now, and met a cruel death calmly, fearlessly; men have walked with a smile on their pale lips to their death on the scaffold for the love of right and liberty, and the world has extolled their courage, and history has given its record, and made their fearless, dauntless bravery immortal. Courage such as this was needed by Archibald, Earl of Ivor, as he went slowly up to the room where Jean was, carrying with him her sentence—a sentence more cruel than death!—To be continued.

FACTS ABOUT PHILATELY.

PRAKRAMA.

IX.—The Selection of an Album.

THE arrangement of a stamp-collection in such a manner that the specimens comprised in it shall be correctly classified, and readily examined and compared, is an invaluable aid to the study of Philately. An album is usually employed for this purpose, and great care should be exercised in its selection, as a mistake can only be corrected by buying a new album, in which case in transferring the stamps some of them may be injured. Those commencing the collection of postage stamps usually prefer an album with spaces ruled and descriptions of the stamps which they are intended to contain; but the advanced Philatelist will find this inadequate to his wants, as none published provides spaces for all the varieties which should be included. I would caution beginners not to buy albums containing pictures of stamps; for when, as is sometimes the case, these are larger than the stamps they represent, the latter, when inserted, will have very unsightly borders around them. If the Philatelist is desirous of having exactly such an album as his collection will be displayed in to the best advantage, he can have one made to order by any manufacturing stationer, and then rule spaces for every variety he intends to accept. Whatever classification is adopted should be adhered to throughout, and a combination of a geographical with an alphabetical arrangement is probably the best. Thus: all European postage stamps would be arranged alphabetically by the names of the countries emitting them, and would be separated from those of Asia, Africa, North America, South America, Australasia and Oceanica, the stamps of each of which divisions would be similarly arranged.

The revenue stamp collector should commence with a blank album and arrange it throughout himself, as none has been published—at least, none that I have seen or heard of—that is complete enough to be worth half the price asked for it. Some of the finest sets, like the United States Document stamps, the Documentos y Libros issues of Mexico and the fiscal stamps of Ceylon and British Guiana, are suitable for framing, and when thus displayed present an elegant appearance. Perhaps it may be found preferable to mount stamps on sheets of drawing paper and keep these in a portfolio, this method having at least one advantage, that the collection can be extended indefinitely. If an album is intended to contain cigar stamps among other kinds, it should measure not less than 22 inches across the page; but if these are not collected, it may be much smaller. In a large album, however, stamps can be displayed to much better advantage than in a small one. I have seen paper of a neutral gray tint recommended for albums; this would bring out some colors finely, but where the stamp was of the same color as the paper, the effect would be entirely spoiled; and this seems to me to outweigh the advantages. The national arms and flag of a country and portraits of its rulers form very pleasing ornaments for an album, and their use is quite general.

X.—How to Mount Stamps.

Adhesive stamps should never be attached entirely to the leaves of an album. If this is done they cannot be easily removed to make room for better specimens, and, what is more important, their backs cannot be examined for a watermark or other peculiarities. A stamp may be mounted very conveniently by gumming the end to a strip of tissue paper, which is then folded back and attached to the place prepared for it. The stamp can thus be raised for examination or removed without injury. A further improvement is the attachment of the tissue paper hinge to a piece of paper of the same size as the stamp, on which any interesting facts about it may be written; this is attached in the album by a few dots of gum on the back, one at each corner being sufficient. Other methods of mounting adhesives may occur to the Philatelist, and it would be well to experiment on common stamps as to improvements in this direction. Where stamps require washing, it should be done with the utmost care, so as not to fade the colors. The best way to remove paper from the backs is to float them face up on a dish filled with cold water. The colors of many Russian postage stamps and a few others dissolve in water and they must be kept entirely dry.

The best way I have yet seen for mounting entire stamped envelopes is to cut slits in the pages of the albums at distances a little less than the sizes of the envelopes, and insert the corners in them. Stamped newspaper wrappers may be folded and inserted in the same way. For postal cards, the album published by Scott & Co., of New York, will probably meet the wants of the amateur, as both sides of the card are exhibited. The only available way for exhibiting stamped letter sheets, and stamped match, medicine and tobacco wrappers, is to fasten them by the corners.

If the gum used in attaching stamps is not of the very purest quality, they will probably be ruined. The best gum arabic dissolved in cold water should be used. Prepared mucilage should never be employed, as it will in time change the colors of many stamps, and if the gum becomes sour the same results will follow. It is perhaps unnecessary for me to remark that the beginner should not cut off the perforations of stamps, but this has sometimes been done, and an equally absurd practice, that of cutting out the stamps from envelopes and wrappers is unfortunately very common. In consequence of this, many stamped envelopes are almost unattainable in an entire condition. When a stamp is unperforated it should never be trimmed unless cut very irregularly, as its value is enhanced by a broad margin, which is the only evidence that it has not been tampered with.

XI.—The Detection of Counterfeits.

With regard to stamps, as well as bank notes, it may be said that an acquaintance with the genuine article is the only safeguard against taking counterfeits, but with this knowledge it is usually easy to detect them. A large proportion of the genuine stamps issued have been engraved, and the imitations of them are frequently lithographs. If the collector would distinguish readily between these styles of printing, he can soon learn by examining various fine specimens of engraving and lithography with a microscope of low power, when the appearance of the work, particularly of the hair lines, will be found totally different. Counterfeiters usually follow the prominent features of the design very closely and fail in the details; for which reason it would be well to notice small peculiarities, such as the shading of the letters, the closeness of the groundwork, and when the stamp should be watermarked this is usually, if not always, omitted in counterfeits. The fine geometrical lathe-work, which occurs in many modern stamps, has very seldom been imitated so well as to be at all deceptive. If the Philatelist buys a stamp of a high denomination, and finds the engraving coarser than that on a low value of the same set, he may conclude that it is a counterfeit; and if a rare stamp is offered at a very low price, no careful collector will buy it until a thorough examination has proved its genuineness. Sometimes an enterprising swindler tries to sell stamps which have never had a genuine existence; but these ventures have seldom been very successful. It may be safely said that if Philatelists were always careful in their purchases and a trifle less eager to secure great bargains, they would seldom find that they had been victimized.

XII.—Good Advice.

In closing this series of articles on Philately I would like to give those commencing the study a little really good advice. The first point I would make is that the Philatelist should never buy stamps from any parties who give only a post office box as their address. This is not the way in which respectable business houses transact business, and is usually done with a direct intention to swindle the customer. I am not aware that a legally incorporated company is in existence in the stamp business, and when such a style is used fraud may reasonably be expected, or at least a desire to avoid responsibility for mistakes. If the collector lives in a city where there is a reliable stamp dealer, by all means buy of him, as no advantage gained in cheapness can equal that of being able to select specimens at leisure from a large stock. The following dealers, I believe, will be found entirely reliable, and any one of them will, doubtless, give satisfaction: Scott & Co., 146 Fulton St., New York, Wm. P. Brown, 145 Nassau St., New York, F. Trifet, 61 Court St., Boston, J. W. Haseltine, 1225 Chestnut St., Philadelphia, L. W. Durbin, 105 S. 5th St., Phila. As I have

confined my purchases in stamps entirely to New York dealers the others are given as they have been reported to me favorably.

Do not attempt the collection of every kind of stamps for unless you can spend several thousand dollars you will have a first-class collection of *nothing*. For instance, take the postage stamps of Europe; collect all the desirable varieties you can obtain; study them carefully; try and learn something new and interesting about them. If you do this you may obtain a fine collection in a few years and will derive more pleasure from the study than if you had a collection of every class of stamps, and nothing complete, nothing rare in it, no stamp or set of stamps which a Philatelist who saw it would care to possess.

Those who take up stamp-collecting merely as an amusement will find that like other amusements when the charm of novelty has gone it will become distasteful; while any one who really makes a study of Philately will find the field of his researches constantly expanding. The science has an intrinsic interest aside from the mere fact of rarity, and after an experience of ten years or fifty years the subject is not much nearer exhausted than when the Philatelist was dazzled with the first package of stamps.

MARK TWAIN ON BABIES.

At the banquet of the Army of the Tennessee, at Chicago, a toast was proposed to "The Babies." Mark Twain responded as follows:

"The babies."—As they comfort us in our sorrow, let us not forget them in our festivities. [Laughter.] I like that. We haven't all had the good fortune to be ladies. [Laughter.] We haven't all been generals, or poets or statesmen. But when toasts work down to babies, we stand on common ground, for we have all been there; we have all been babies. [Laughter and applause.] It is a shame that for thousands of years the world's banquets have utterly ignored the baby as if he didn't amount to anything. If you gentlemen will stop and think a minute; if you will go back fifty or one hundred years to your early married life [laughter], and contemplate your first baby, you will remember that he amounted to a good deal, and even something over. You soldiers, you all know when that little fellow arrived at family headquarters, you had to hand in your resignation. [Laughter.] He took entire command. You became his lackey, his mere body-servant, and you had to stand around, too. He was not a commander who made allowances for time, distance, weather or anything else. You had to execute his order whether it was possible or not; and there was only one form of marching in his manual of tactics, and that double-quick. He treated you with every sort of insolence and disrespect, and the bravest of you didn't dare to say a word. You could face the death-storm of Donelson and Vicksburg, and give back blow for blow [applause]; but when he clawed your whiskers and pulled your hair and twisted your nose you had to take it. [Laughter.]

When the thunders of war were sounding in your ears you set your face toward batteries and advanced with steady tread; but when he turned on the terrors of his war whoops you advanced in another direction [laughter]; and mighty glad of the chance too. When he called for soothing syrup, did you venture to throw out any side remarks about certain service being unbecoming an officer and a gentleman? [Laughter.] No; you got up and got it. If he ordered his pap-bottle, did you talk back? No; you went to work and warmed it. You even descended so far in your menial office as to take a sup at that warm, insipid stuff yourself to see if it was right, three parts water to one of milk, a touch of sugar to modify the colic, and a drop of peppermint to kill the immortal hiccough. I can taste it yet. [Roars.]

And how many things you learned as you went along. Sentimental young folks still take stock in that beautiful old saying, that when the baby smiles in his sleep it is because angels are whispering to him. Very pretty, but too thin. [Laughter.] Simply wind on the stomach. My friends if the baby proposed to take a walk at his usual hour, 230 in the morning, didn't you rise up promptly and remark with a mental addition which wouldn't improve the Sunday School book much, that it was the very thing you were about to propose yourself? [Roars.] Oh, yes, you were under good discipline, and as you went fluttering up and down the room in your undress uniform, you not only prattled undignified baby talk, but you tuned up your martial voice and tried to sing 'Rock a by, baby, in the tree top,' for instance. What a spectacle for the Army of the Tennessee, [roars of laughter,] and what an affliction for the neighbors, too! For it isn't everybody within a mile around that likes military music at three o'clock in the morning, and when you had been keeping this sort of thing up two or three hours and your little velvet had intimated that nothing suited him like exercise and noise, what did you say? You simply went on till you dropped in the last ditch. [Great laughter.]

The idea that a baby don't amount to anything! If the baby can't furnish more business than you and our whole Interior Department can attend to, he is not enterprising. Irrepressible, brimful of lawless activity, do what you please, you can't make him stay on his reservation. [Prolonged laughter.] Sufficient unto the day is one baby. As long as you are in your right mind, don't you ever pray for twins. Yes, it was high time for the toast-master to recognize the importance of babies. Think what is in store for the recent crop.

Fifty years hence we shall all be dead, I trust, and then this flag, if it still survives—and let us hope it may—will be floating over a republic numbering 200,000,000. According to the settled laws of increase, our present schooner of State will have grown into a political leviathan Great Eastern, and the cradled babies of to-day will be on deck. Let them be well trained, for we are going to leave a big contract on their hands. [Applause.] Among the three or four million cradles now rocking in this land are some which the nation would preserve for ages as sacred things, if we could only know what ones they are. In one of the cradles an unconscious Farragut of the future is at this moment teething. Think of it. And his father is putting in a world of dead earnest, unutterable, but perfectly justifiable profanity over it, too. In another a future renowned astronomer is blinking at the shining milky substance with but languid interest, the poor little chap, and wondering what is to become of him. In another a future great historian is lying, and doubtless he will continue to lie till his earthly mission is ended. [Laughter.] In another a future President is busying himself with no profounder problem of state than that of what the mischief has become of his hair so early, and in mighty array in other cradles there are some 60,000 future office-seekers getting ready to furnish him the occasion to grapple with that same old problem a second time. And still in one more cradle somewhere under the flag the future illustrious commander-in-chief of the American armies is so little burdened with his approaching grandeurs and responsibilities, as to be giving his whole strategic mind at this moment to trying to find out some way to get his own big toe into his mouth. [Applause.]

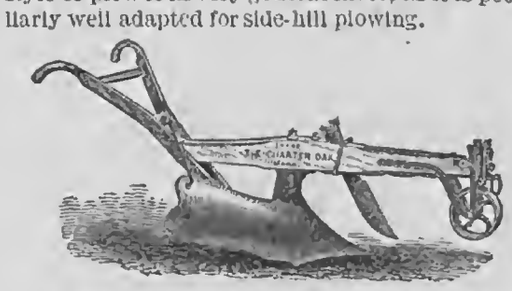
SMOKING IN PUBLIC CONVEYANCES.

The question has been asked, have the managers of public conveyances the right and power to put off from their vehicles people who persist in smoking? The answer is that the right and the power generally exist in such managers to make and enforce reasonable regulations for the comfort of the general public, and the prohibition of smoking comes within the rules, until it can be proved that tobacco smoke is not noxious nor offensive, and that the great majority of persons are smokers. Smoking is an indulgence, not a necessity, and no man has a right to procure his personal pleasures at the cost of inconveniencing and annoying others. But underlying all this the point of gentility comes up.

Will any gentleman insist upon smoking in a public conveyance when he cannot help knowing that in doing so he is annoying both women and children, and often causing them serious trouble and nausea? Some flippant reasoners try to draw the line at a cigarette or a mild cigar, but the offence against good manners is the same, differing only in degree. Tobacco smoke is tobacco smoke, though some may only make a lady sneeze, while some is strong and rank enough to upset a delicate stomach entirely. A gentleman is known, not by his style of dress, but by his consideration for the feelings and comforts of others. The same applies to tobacco chewers, who distribute their saliva in public places to the injury of women's dresses and the annoyance of all people of delicate sensibilities. The difficulty, however, in talking about these matters with an eye to the public comfort lies in the fact that persons who are guilty of these habitual breaches of decorum are not likely to heed any remonstrances, no matter how pointed and emphatic.—*Baltimore American.*

PREMIUM NO. 57.

This premium is the Charter-oak swivel plow, that is made and supplied to us by the Higganum Mfg., Corporation. In the Eastern States this style of plow is in very general favor, as it is peculiarly well adapted for side-hill plowing.



Our illustration shows the plow we offer, which is full-rigged. It is a two-horse plow. This is thoroughly a farmer's premium, and is a capital gift to receive for sending us only 18 subscribers. Our new premium list contains quite a number of farming tools that will be acceptable on almost every farm, and certainly no simpler or better way could be devised to turn the idle winter days to profitable account than by placing a good paper in the hands of your neighbors, and receiving a useful present in return for your trouble.

RECENT LITERATURE.

Harry Ascott Abroad. By Matthew White, Jr. New York: Author's Publishing Co. 115 pp. Price 60c.

This is an American boy's experience abroad, charmingly narrated in genuine boyish spirit; and with a naturalness that fascinates while it instructs. He hunted out the wonders which boys delight in, and describes them with continuous interest.

The peculiar sights of Hamburg, Frankfort-on-the-Maine, Heidelburg, Baden-Baden, Stuttgart, Nuremburg, Dresden, Berlin, Cologne, Bale, Berne, Interlaken, Lucerne, Paris, London, etc., fairylike castles, eccentric acquaintances, royal turnouts, curious student caps, chairs that played tunes when sat upon, glittering hussars in white boots, horse cars made wrong side out, and thousands of other oddities and pleasing curiosities for young eyes, are charmingly described.

MAGAZINES FOR DECEMBER.

Appletons' Journal.—Contents: Memoirs of of Madame de Remusat. (Continued); Vivian the Beauty, by Mrs. Annie Edwardes. (Conclusion); Some Aspects of Robert Burns; The Seamy Side, by Walter Besant and James Rice. Chapters XXII. and XXIII.; Parliamentary Government in America, by Horace White; Charles James Matthews; Domestic Art, by Eustace Balfour; Fragments: Dr. Hillebrand on Modern England; George Eliot as a Godless Writer; Editor's Table: The Purpose of Fiction—Histrionic Realism—The Obelisk; Books of the Day: The Light of Asia—Blanid—Bayard Taylor's Studies in German Literature—Apthorp's Hector Berlioz—What Mr. Darwin saw in his Voyage round the World in the Ship Beagle—Jules Verne's Exploration of the World—Harper's New Latin Dictionary—Early Christian Literature Primers.

The Purpose of Fiction.—" " " Now, the real reason for the novel, the why and wherefore that men and women delight in the fictitious fortunes of other men and women, is because something is given which supplements nature, which bestows that which life too often denies. Every man has at heart a passionate love for what may be called the symmetries of fate—for the rewards that follow earnest and honest endeavor, and the justice that gives us finally full compensation for all that we endure. Through all the calamities and mishaps that surround us, we dream of possibilities—we imagine the good that will come by and by to cheer us; of difficulties that are assailed and overcome, of enemies that are put down, of the felicitous completion of our schemes. And it is exactly because these dreams so rarely come true in real life, that we delight in those inventions called novels, wherein wrong and suffering are suitably rectified. When mischance pursues us, there is sweet compensation in following the career of a hero who overcomes misfortunes, and wrests things to his own ends. In real life, bitterness and jealousy may be felt at the better fortunes of other men; but in the novel the hero is the very reader's self, and all the felicitous achievements and successes are enjoyed with almost as much zest as if they were his very own. The very foundation of fiction, its significance and meaning, lies in this power to reflect each reader in one of the principal personages. It shows us what we would like to do, and what we know we feel. " " " If fiction did not succeed in getting us out of ourselves, in creating worlds more delightful than the world we experience, in fashioning things better to our liking than Fate fashions them, it is certain that novels would go generally unread. " " "

Distinctly, nobody wants novels that reproduce all the sufferings and struggles of real life unless supplemented with those compensations that in real life ought to follow, but rarely do; for the novel is nothing more than a device for setting the disorders of life right, and making us all happy by the contemplation of final, and so often rightly called poetic justice. The novel that does not do this thing for us may entertain a good many people by its character sketches and its descriptions, but, in missing the fundamental purpose of the novel, must fail to command the earnest sympathies of the general world of readers.—*Appletons' Journal for December.*

Phrenological Journal. Contents: — Henry Kiddle, Late Superintendent of New York City.—With a Portrait; The Vow of Faith; The Color Sense; The Elevation of the Individual; The Town at the End of the Rainbow; Henry C. Carey; The Skimmias.—Illustrated; Henry A. Hartt, M. D.—With Portrait; "Unwarrantable Positions;" Comparative Value of Common Articles of Food; The Earth Cure; Nurse Girls. Poetry—In the Van; A Boyhood's Memory. Editorial Items.—To the Reader; Sponges; Some Very Common Lunatics; Popular Inanity; Further Showings from French Sources; Memory Strengthened by Practice; Causes of Sudden Death, etc. Notes in Science and Agriculture.—A Cave Wonder in Arizona; Forest Consumption; Iron and Glue in Street Dust; Hard and Soft Water; The Production of a Single Bean; A Horse Killed by Tea; Apples Every Year; The Blood in Diagnosis; To Remove India Ink in Carpets; A Home-made Galvanic Battery; To Get Rid of Rats; Grafting Grape Vines. Answers to Correspondents.—Conscience; Location of Organs; Mushrooms and Toadstools; Children and Flesh Diet; Physiognomical Sign: Unwholesome Cookery; Glucose and Digestion; Immortality and Immorality. Our Work, and What our Friends Think of it. Personals—Wisdom—Mirth—Library.

Causes of Sudden Death.—Very few of the sudden deaths which are said to arise from disease of the heart do really arise from that cause. To ascertain the real origin of sudden deaths, an experiment was tried and reported to a scientific congress at Strasburg. Sixty-six cases of sudden death were made the subject of a thorough post-mortem examination; in these cases only two were found who died from disease of the heart. Nine out of sixty-six had died from apoplexy, while there were forty-six cases of congestion of the lungs—that is, the lungs were so full of blood they could not work, not being room enough for a sufficient quantity of air to enter to support life. The causes that produce congestion of the lungs are—cold feet, tight clothing, costive bowels, sitting still until chilled after being warmed with labor or a rapid walk, going too suddenly from a close room into the air, especially after speaking, too hasty walking, or running to catch a train, etc. But one of the signal reasons for congestion of the lungs and sudden death is the decreased action of the heart, caused by the use of coffee and tobacco. The use of spices has a similar effect. The heart stops from a paralysis of the nerves which promote its action, and a post-mortem examination would not reveal the fact. There is really no disease of the heart, simply a suspension of its action by a paralysis of the nerves which give its motion. These causes of sudden death being known, an avoidance of them may serve to lengthen many valuable lives, which would otherwise be lost under the verdict of heart complaint. That disease is supposed to be inevitable and incurable; hence many may not take the pains they would to avoid sudden death, if they knew it lay in their power.

The Youth's Companion.—The extraordinary popularity of the Youth's Companion, with its circulation of nearly 140,000, is a gratifying proof that a first-class, pure and high-toned family paper is widely appreciated. It may be safely inferred that, in any home where the Companion is found, none of the objectionable periodicals that flood the country can find access. The care with which the proprietors of this paper have guarded their pages against anything of a detrimental nature, either to mind or morals, has thus far been amply rewarded, and no publication in the world furnishes its readers with more narratives, stories, sketches, adventures, anecdotes, poems, jokes, puzzles, pictures, descriptions of foreign lands, travels, tales, biographies, articles on the social, moral, political, financial, literary and scientific questions of the day, than the Companion, all being original, and from the pens of the best writers of the age. The Companion is a weekly, published by Messrs. Perry Mason & Co., 41 Temple Place, Boston, at the extremely moderate price of $1.75 a year.

VARIETIES.

THE HEALTH TO MISS O'NEILL.

The death and burial, last week of a poor forlorn old woman of 80, the once famous Washington belle, Mrs Eaton, who in General Jackson's time caused so much stir, by her resolute will as well as her beauty, has revived, among other things, the fact that it was she of whom Edward Coate Pinkney, half a century ago, wrote his famous song, which was afterwards published under the caption "The Health," and was widely and deservedly admired as a fine and polished piece of literary work, as well as for its spirit. Pinkney, though an American in everything but the accident of his birth (his parents happened to be abroad at that time), was born, like Praed, in London, and in the same year—1802. Pinkney died prematurely, in 1828, or he might perhaps have produced poems still more notable. Here is his famous "Health," in honor of the then beautiful Miss O'Neill:—

"A HEALTH TO THE MOST BEAUTIFUL WOMAN IN AMERICA."

I fill this cup to one made up
  Of loveliness alone,
A woman, of her gentle sex
  The seeming paragon,
To whom the better elements
  And kindly stars have given
A form so fair, that like the air,
  'Tis less of earth than heaven.

Of her bright face one glance will trace
  A picture on the brain,
And of her voice, in echoing hearts
  A sound must long remain;
And memory such as mine of her
  So very much endears,
When death is nigh my latest sigh
  Will not be life's but hers.

Affections are as thoughts to her,
  The measure of her hours:
Her feelings have the fragrancy,
  The freshness of young flowers.
And lovely passions changing oft
  So fill her, she appears
The image of themselves by turns
  The idol of past years.

I fill this cup to one made up
  Of loveliness alone,
A woman of her gentle sex
  The seeming paragon.
Her health! And would on earth there were
  Some more of such a frame,
That life might be all poetry,
  And weariness a name!

The London Times thinks it is well for the credit of the British nation "that foreigners do not habitually study the reports of the business done at assize towns. It is well, too, that races whom it is our work in the world to teach, elevate and civilize do not know of the unfailing tale of brutal acts of violence which come before our criminal courts. The knowledge of these ugly facts might be seriously injurious to the good name and moral influence of England." The particular case which excites this comment is as follows: A shoemaker asked his wife for a shilling. She refused to give it to him and he accordingly rushed at her, struck her violently, knocked her down, dragged her across the road, dropped her in the gutter, kicked her on the head and upper part of the body, and then took away her shilling. The next day he called in the doctor, who arrived after the woman was dead. During all this time both the man and his wife were sober; drink was not the excuse. The man was put on trial for feloniously killing his wife, not for murder or manslaughter. He was found guilty, but recommended to mercy. The lord chief justice of England sentenced the brute to six months' imprisonment with hard labor. It does not seem to be very hard to understand why violence is common in a country where that is deemed adequate punishment for such a crime.

Dyeing the Eyes.—A learned German doctor has, it is announced, discovered a means of dyeing the eyes of animals in general and of man in particular any color he pleases. He is accompanied on his travels of propagation by a dog with a rose-colored eye, a cat with an orange-red eye, and a monkey with a chrome-yellow eye. But the most curious specimens of his art are a negro with one eye black and the other blue, and a negress with one eye gold-colored and the other silver white. The doctor says the process of ocular transformation, far from injuring the sight, strengthens and improves it.

According to the "Parisian" the wedding-dress of the future Queen of Spain will be of white baccarat, covered with a court mantle of excessively fine lace. All the escutcheons of the ancient kingdoms of Spain and their alliance are reproduced by a process hitherto unknown. The escutcheons form the border, and the ground of the mantle is flowered. The bridal veil is a reproduction in miniature of the mantle. The gala toilette will be of gold brocade, embroidered with touffes of roses in relief, joined together by bands of myosotis and little feur-de-leus. Another grand reception toilette will be of silver brocade embroidered with geranium flowers of all shades.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

LOG-CABIN SKETCHES; OR, JESSIE SEABRIGHT'S DIARY.—No. 9.

MAY MAPLE.

September 24, 18—.

How the weeks glide by; and oh! such busy ones! I often wonder how so many of my neighbors can find time to visit so much, and then complain of being lonely if they are compelled to remain with their families for a day or two. My time is so fully taken up that I never think of being lonely. Yet I enjoy the society of my friends most intensely when I am privileged to meet them.

For the last few weeks all my spare time has been employed in making a pair of white bedspreads. I used the heaviest sheeting, bleaching it myself till it was pearly white. I marked one in diamonds and the other in checks an inch wide. Then I tied in coarse knitting cotton so that it looked like little balls of fringe. The spreads were really pretty, and the material for the pair cost only $1.50. This I earned picking berries and selling them to those of my neighbors who had either no strength or time for such work. A week or two ago John invited me to go over to Mr. White's. So I took one of my counterpanes and rolled it up into a snug parcel, and carried it to Louise for a present.

I think I never saw anyone more pleased with a costly gift than she was with my humble offering. Of course we enjoyed the visit, as we always do, and had many a merry laugh as we looked about the cosy home, finding so many counterparts of the "Seabright Cabin." Soon after our entrance to the house, Mrs. White called my attention to some improvements her husband had made quite recently; for instance, a flight of stairs in place of the ladder.

"Oh! that is nice," said I. "I wish Mr. White would let his mechanical cloak rest on John's shoulders for awhile, for that is just what we need so much."

"Why," said John, who was standing near, "I thought my wife was a born carpenter, and I have been looking for those stairs to make their appearance for the last six months."

"That being the case, you shall not look in vain much longer," said I.

But how the work was to be accomplished was more than I could tell. And for the next ten days I thought of but little else. There was no way that I could see for getting the material, for my purse was nearly empty—no new thing—and there seemed no way of replenishing it.

Yesterday morning I had scarcely finished my work when our friends, Mr. and Mrs. White, drove up to the door, with what appeared to be a wagon-load of lumber. And, sure enough, when Mr. White came in, he brought in a flight of steps, and told Louise to move the ladder out of his way. In half an hour the stairs were placed and the partition boards up. Of course, Louise and I had not been silent all this time; but when the work was all done, Mr. White turned to me, with a low bow and mock gravity, and said: "Accept this little service from your friend Louise and her other half, as a token of sweet remembrance for your own kind deeds." We both laughed at his dignified speech, but the tears would come to my eyes as I thanked them most heartily for this unexpected gift.

When John came in an hour later, he declared there must have been conjurors about the house; and at night, when he went upstairs to bed, he thought our present really worth having; he had never thought there was so much difference.

Ah! he had not been obliged to climb that ladder twenty times a day, bundles and boxes in hand, and at the same time holding up dress skirts from beneath the feet, or he probably would have found, long ago, that a ladder in the house for a woman to climb was not a convenient thing.

A LITTLE GIRL'S CLOTHING.

E. K. R.

I HAVE just been dressing my little nine-year-old daughter in her winter clothing, which I have been at work on for several days. She and I are so delighted with the suit that I am tempted to describe it for the benefit of other mothers, who may be as ignorant as I once was of making clothes in the most healthful and comfortable manner.

First comes a high-necked and long-sleeved red flannel chemise. The neck, which never is seen above the dress, is simply bound with plain red calico and the short opening down the front is also faced with that; but the sleeves I button-hole-stitched in small scallops with red worsted, which would look a little neater in case they accidentally showed at the wrist. The binding, however, wears a little better for the neck. Next comes a long waist made of brown drilling (waist lining) fitted, but loosely, by seams under arms and on shoulders and buttoned up the back. On the lower edge, directly under each arm, is a button-hole into which one end of the stocking elastic is buttoned, the other end is fastened to the stocking by a buckle. There are two rows of buttons around the waist, the lower ones for the drawers, the upper ones to fasten the skirts upon, so that there might not be the slightest dragging upon the hips.

If all of the present mothers would take these precautions, to *suspend the clothing upon the shoulders instead of the hips*, would not that be one step toward insuring better health for the coming generation of women? The drawers, of thick, firm flannel, are made long enough to reach underneath the stockings to the tops of the high-buttoned calf-skin shoes. They are cut quite tapering, so as to fit rather snugly below the knee, (not to fill the stockings too much), and are left open three or four inches at the bottom, to allow drawing on easily. This opening is lapped together before pulling the stocking up. To avoid all clumsiness possible, the drawers are not hemmed, but are overcast with needle and thread. On best occasions a pair of muslin drawers tucked, puffed, or embroidered at pleasure, may be worn over these; but they are unnecessary for "every day." The skirt is butternut-colored, thick, home-made flannel, cut goring and trimmed with three rows of narrow, black braid just above the hem. The band at the top is made of strong drilling with button-holes for attaching to waist. The bands to the drawers should also be made of strong cloth, or they will be worn out before the flannel is. Her dresses are all cut after the Princesse pattern and made without much trimming, as large aprons nearly cover them.

Gingham always seems the most suitable apron material, and yet my little girl loves best one made of bright, pink calico, which was her own selection at "our country store." Children like pretty colors best, and why not indulge them sometimes, even if it isn't "the fashion to wear 'em."

THANKSGIVING WINE AND BRANDY IN RECIPES.

MRS. EMILY MAPLE:—I have been a reader of the RURAL in all its departments and am especially interested in that conducted by you; for what woman or housekeeper is not? In last week's number—Nov. 15—I notice some Thanksgiving items. That from Clinton Co., Iowa I most heartily approved of, for it has always seemed to me a sinful waste of time and strength to spread such *loaded* tables before our families and friends upon Thanksgiving or any other day. *Enough* and *good* is *good enough*. We are naturally a gormandizing people, who cannot withstand temptation of good things. In the same number of the RURAL are many good and inviting recipes for Thanksgiving preparations. But the wine and brandy found in some of them are dangerous. If dangerous in the saloon, surely they cannot be less so upon the home table prepared by the mother's hand! Old appetites have been aroused and new ones formed, which have led to ruin, by the use of these articles in the preparation of food. Uncle Mark refuses to publish a recipe for making wine, to which I call attention. If these few words may set some mothers to thinking of these things, my effort will not be in vain. Yours, for the general good,

MRS. E. W. BENEDICT.

QUESTIONS ANSWERED.

Boston Brown Bread.

Wanted—A good recipe for the above.—GEO. HENDERSON.

ANS.—One heaping coffee-cupful each of Graham flour, rye flour, and Indian meal. Sift all together, and mix thoroughly with two coffee-cupsful of molasses, two of sweet milk and one of sour, a teaspoonful of salt, and a dessert spoonful of soda.

Pour into a buttered tin pail or form; the batter should not quite fill it, as it must have room to swell; cover tightly, place in a kettle of cold water, put on and boil four hours, looking, from time to time, to see if the water is boiling away, and replenishing always with hot water. The water should not boil over the top of the form. Take the bread out at the end of the four hours, and set with the lid off in the oven for about ten minutes. This is to dry off the outside steam and form a tender crust.

To Roast a Pig.

Wanted—Directions for the above.—MRS. E. NEWTON.

ANS.—See that the pig is well cleaned; wash in two or three waters—a little soda may be added to the first water; wipe dry inside and out.

Prepare a dressing of crumbs, seasoned with a little minced onion, two teaspoonsful of powdered sage, yelk of an egg, salt, pepper, and butter, and moisten with a little water, Stuff into his original shape. Sew up, place in a kneeling position in a dripping-pan, skewering the legs in place. Pour a little hot water in the pan. Baste once or twice with butter and water; afterwards with the gravy in the pan. Roast in a moderately-heated oven from two hours to two hours and a half. To keep the skin from cracking, rub every few minutes with a rag dipped in melted butter. Garnish with parsley, or blanched celery tops.

News of the Week.

MISCELLANEOUS.

Monday, Dec., 1, 1879.

A brief summary of the President's Message may be given as follows: The President congratulates Congress upon the success of resumption, but takes the ground that unless the coinage of silver dollars is limited, gold will soon begin to flow out of the country and will be replaced by silver. He says that as it has been the policy of the government, ever since the adoption of the constitution, to pay all indebtedness as soon as possible after it has been incurred, a sinking fund should be provided by which the public debt can be paid within some limited time. Very decided ground is taken in regard to polygamy in Utah. This Territory will soon demand admittance as a State, and he recommends that polygamy be made a bar to suffrage and to the sitting on juries, and that the test oath be used to ascertain the facts. Considerable space is devoted to civil-service reform, and the improved condition of the public service is referred to, with the recommendation that a commission be appointed to consider the subject and act as an advisory board. The President reports a very agreeable condition of affairs with all foreign nations. He advices against reopening the question of transferring the Indians to the care of the army. He also gives renewed attention to the election laws, and urges that a sufficient sum of money be promptly appropriated to pay marshals for whose services Congress at its last session refused to pay.

From Boston we learn of the following sudden deaths:—William A. Heeney, of Cambridge, while intoxicated fell down stairs last week and broke his neck. James Woods, of Greenfield, shovelling sand was buried alive, the embankment giving way. Charles Stevens, a bachelor farmer, of North Pond, aged 45, was found insensible in his barn. His skull was fractured. It is supposed that he fell from the scaffold. He died.

A terrible explosion of a portable saw mill occurred at Rush Creek, Indiana, last week. The mill was blown to atoms. Joseph Hanger, engineer, was struck by a piece of the boiler and carried across the highway. The body was found an unrecognizable mass. Three school children near the mill, were cut and scalded, but not fatally. Most of the mill hands were away at the time and escaped. The mill was old. Hanger, on leaving home, Monday, said to his mother: "I'll be home Saturday, unless the old boiler blows up and kills me."

The fools are not all dead yet. One day last week a young man named George L. Sherry of Brooklyn, attempted to commit suicide by shooting himself in the left breast. He gave as the reason of this outrageous act, that he was suffering from ill health from which he thought he could not recover. His wound may prove fatal. Another man, also of Brooklyn, named John S. Francis, attempted to take his own life in the same manner and on the same day. He may possibly recover. He could give no reasons for the act.

The Smithsonian Institution has received from Professor Forester, of Berlin, the announcement of the discovery by Palisa, at Pola, November 24, 1879, of a planet of the eleventh magnitude, in two hours ten minutes right ascension, 15 deg. 15 min. north declination, with a daily motion of 40 sec. in right ascension and one minute south.

An enormous fire on the 25th ult. completely destroyed the stables belonging to the Eighth Avenue horse railway, situated at Eighth Avenue and 49th street, this city. The fire broke out about six o'clock in the morning, at which time there fortunately were assembled a large number of drivers and conductors at the stables ready to commence the day's work. There were about 1,200 horses in the stables, most of which were on the fourth floor, and in spite of all efforts about 200 horses perished in the flames. Total loss $150,000, most of which was covered by insurance.

One-half of the town of Owensburg, Greene County, Ind., was destroyed by fire on the 26th. The fire originated in Burchom's Hotel, which, with the greater part of the mercantile establishments, was destroyed. The population of Owensburg is between three and four hundred.

Treeless Iowa is being transformed into a forest-covered country, by a law which remits certain taxes for five years on every acre of fruit, and 10 years on every acre of forest trees planted and kept alive. Over 75,000 acres of fruit and forest trees have been planted, and $200,000 have been remitted in taxes. The Poncas are now doing well in Indian Territory. Houses are built for many of them, and by the 1st of January all will be supplied therewith. They have also become acclimated, and the health of the tribe has greatly improved. Indian children are as bright and teachable as white children of the same ages. Exclusive of the five civilized tribes of Indian territory, there are now over 7,100 children taught at agency schools. The five civilized tribes have 6,250 children at school.

The agent in charge of the White Earth Reservation in Minnesota reports to the Interior Department that the Chippewa Indians have made a very gratifying success of the experiment of raising sorghum in that part of the country. Twenty-five acres upon which the experiment was tried last season yielded 160 gallons of syrup per acre. The Chippewas are much pleased with the industry, and next year will plant 200 acres with sorghum. The agent reports that it will grow and ripen upon any lands capable of producing corn. The Chippewas, about one thousand in number, who were all wild Indians ten years ago, have also this season raised abundant crops of grain and vegetables, and are reported to be happy and contented.

The South Carolina rice crop last year was a short one, 72,903 tierces, but this season's harvest is estimated at 81,000 tierces—the largest since the revival of rice culture in 1865. The annual acreage is steadily increasing, extending inland and reclaiming abandoned coast plantations.—This year's crop of Louisiana sugar will realize $25,000,000, and it is expected that next season will see plantations in cultivation that have been waste places for years.

Despatches from San Francisco have been received at New Bedford, and give some interesting details concerning the Arctic whaling fleet. The Helen Mar brought home 1,100 barrels of oil and 1,600 pounds of bone. Captain Hickmott says that when he abandoned the bark Mercury on October 24, she was caught in the ice just north of Herald Island, latitude 72 deg. 10 min. north, longitude 172 deg. west, and at the time had on board 4,500 pounds of ivory in addition to 1,000 barrels of oil and 900 pounds of bone. His wife and child were with him, and all were rescued by the Helen Mar. The Mercury's freight was estimated to be worth $30,000; the vessel was only insured for $40,000.

A despatch to the Galveston News from San Antonio states that a private letter dated Chihuahua, Mexico, Nov. 14, says:—The Indians are reported as depredating the country 100 miles west of El Paso, Texas. A party of fifteen men went in pursuit, and followed the trail to the Candeleria Mountains, where the Indians ambushed themselves all but one or two. When the news reached the town a strong party organized and started on the trail. Arriving at the scene of the massacre they commenced to bury the dead, and while thus employed were fired upon and eighteen killed. The Indians apparently were armed with Sharpe's rifles and supposed to be frequenters of the State's reservation. A large force has been organized.

Mr. William H. Vanderbilt has sold 150,000 shares of New York Central railroad stock, equal to 15 million dollars, to a syndicate of foreign and domestic bankers. In an interview with a Herald reporter he stated in substance that he had learned that a strong public sentiment had been created against him for monopolizing railroads, and to appease this feeling in a measure, he had sold the above large amount of stock. The noted desperado Allen Palmer brother-in-law of the equally notorious James Coys, was recently captured in Texas. Palmer has been in the hands of the authorities before but have always managed to escape justice. He is known to have belonged to several desperate gangs, and is charged with a dozen murders.

In the Senate on Monday last, the only new member sworn in was ex-Governor Baldwin, of Michigan, in place of the late Zach. Chandler. Six Congressmen were also sworn in on Monday, namely—Horace Davis, Horace F. Page, Romauldo Pacheco, republicans; and Campbell P. Berry (democrat), of California; Waldo P. Hutchins (democrat), of New York, vice Smith (republican), deceased; W. G. Thompson (republican), of Iowa, vice Clark (republican), deceased. This will make a full house of 293 members, of whom the democrats have 150, the republicans 131, greenbackers, 11, independent democrat (Dr Felton) 1. This gives the democrats a majority of seven over all.

There are to-day more than 242,000 Government pensioners. The amount of the year's pensions to all pensioners is $25,493,742; but the actual payment is millions in excess, because the newly-admitted cases have arrears of pension due.

EGGLESTON TRUSS CO.—*Gents:*—Your Truss is a perfect support for my hernia. It has not come down for some time; I am sure it is getting well. It is adjustable to every position of the body. I have tried a number of trusses, but I never found one before that would serve me. There is quite a number of men around here that are ruptured. They have been asking me about your Truss; of course I recommend it. Send me some bills for them, and I will get their orders. Yours,

Murray, Iowa. L. M. WALKER.

Dr. Pierce's Extract of Smart-Weed is a compound fluid extract of smart-weed, or water-pepper, Jamaica ginger and other ingredients known to be efficacious in curing colic, diarrhœa, dysentery, blood-flux, and kindred affections. It also breaks up colds, fevers, and inflammatory attacks. Sold by druggists.

The Youth's Companion.

For judicious editing, select and popular contributors, and sprightly, entertaining reading, the *Youth's Companion* has no superior among the Youth's publications. It has twice the circulation of any similar publication, and unquestionably merits its success.

A FAVORITE COUGH REMEDY.—For Colds, Sore Throat, Asthma, Catarrh and other diseases of the bronchial tubes, no more useful article can be found than the well-known "*Brown's Bronchial Troches*"

ON account of the rise in the price of iron, Osgood & Co., of Binghamton will charge $40 for their Scales on and after Janury 1st, 1880. [See advertisement.]

For General Debility and Prostration Hop Bitters will do wonders. Prove it by trial.

The most comfortable boot in town is that with Lyon's Patent Metallic Heel Stiffeners.

The Markets.

THE GIST OF THE MARKETS.

DURING the week the markets for agricultural products have been pretty steady with slight fluctuations in nearly everything and a decided upward tendency in wool and hops. The greatly increased trade of England with this country in woolen goods within the last few months, and the brisker home trade have created an unusually active demand for the former, while the latter are scarce here and in Europe. The low prices of hops last year led many to plow up their hop fields even in the this State, while the objection Eastern brewers expressed to Michigan hops added to the despondency of hop growers in that State and caused most of them either to discontinue altogether or greatly curtail hop-raising. In England the hop crop is even more of a failure than the cereals, the average crop of 300,000 bales, being only 80,000 on picking. In Germany it is also poor so that hops are now "booming." Three months ago the crop of 1878 was selling at 6@8c. and that of 1879 is now fetching 45@47c.

Reports in papers all over the country show that, on the whole, fall-sown wheat has gone into winter-quarters in fair condition. Droughts affected it somewhat injuriously some time after sowing, but late rains have put it in a thrifty condition. Here and there resowing has been necessary, and the chinch bugs and fly have been depredating, but, taken all in all, the state of the crop is a good average. The area sowed to it is nearly everywhere larger than usual and in the Far West much lately broken land has been sown to it, so that the aggregate acreage to winter wheat will be much larger than heretofore.

The prices of breadstuffs here depend, of course, greatly, if not wholly, on the European demand for our surplus harvests and the more detailed the particulars of the shortage there, the greater it appears. France will want at least 80,000,000 bushels of wheat and that country and Great Britain combined are put down for 224,000,000 while the available surplus from this country is estimated to be not much over 175,000,000 bushels. Other countries also have, of course, a surplus, but the crops too are short in other countries besides those mentioned. A telegram from South Australia just received says:—"Reaping has commenced in the northern districts. It is estimated there will be 375,000 tons of wheat for export." Turkey has just forbidden absolutely the exportation of grain from any of her provinces on the ground that the crops are very short in some sections, and that all indications point to higher prices in the near future. In England millers and other buyers are trying hard to "bear" prices, by ordering only what is necessary, but holders are stiff, knowing that they can afford to wait for better figures.

SPECIALS FROM ALL CENTERS.
Until Saturday, Nov. 30.

Baltimore.—WHEAT—Southern red, $1.40@1.45; do. amber, $1.50@1.60; No. 2 Western winter red, spot and November, $1.45½; December, $1.46½@1.46½; January, $1.49½@1.50; February, $1.52@1.53. CORN—Southern steady; Western dull and lower; Western white, 52@53c.; do. yellow, 53@54c.; Western mixed, spot and November, 51½c.; new, 55½c.; December, 57½@57¾c.. OATS—Firm and fairly active; Southern, 46@47c.; Western white, 46@47c.; do. mixed, 44@45c.; Penn., 46@47c. RYE—Quiet, 80@85c. HAY—Firm; prime to choice Penn. and Md., $17@18. BUTTER—Steady; prime to choice Western packed and roll, 23@25c. EGGS—Firm; fresh, 21@22c.; limed, 16@17c. COTTON—Firmer; middling, 12¾@12½c.; low middling, 11¾c.; good ordinary, 11¼c. BEEF CATTLE—Trade fair and prices fully ½c. higher all round; very best, 4¾@5¼c.; first quality, 3¾@4¼c.; medium, 2¾@3½c.; ordinary, 2½@2¾c.; most sales from 3¼@4¼c. SWINE—5@6¼c. SHEEP—3½@4¼c. lambs, 5@5c.

Boston.—CORN—Old, 63@64c.; new, 60@62c. OATS—47½@50c. for No. 1 and extra white; 46½@47c. for No. 2 white; 43@44½c. for No. 2 mixed and No. 3 white. RYE—95c.; shorts, $16.50@17; fine feed, $17@17.50; middlings, $18@20. WOOL—Demand continues active and prices are steadily advancing; sales of Ohio and Pennsylvania fleeces at 48@52c., but there is very little choice wool offering under 55c., and holders are indifferent about selling or naming the price at present. Michigan and Wisconsin fleeces firm at 47@48c, for X and 49@50c. for No. 1; combing and delaine selections range from 45@55c. for coarse and desirable grades; medium unwashed wools are sought after and range from 40@45c., and are scarce at these figures; Missouri and Maine mediums in demand at 40@42c., and are difficult to find; California in request at 25@41c. for spring and 19@35c. for fall; Texas fall in demand at 30@35c. The movement in foreign wool is unimportant.

Chicago.—Wheat quiet but firm No. 2. red winter $1.21@1.25; No. 2 Chicago spring $1.19¾ cash; $1.19¾1.19¾ Dec. $1.11¾ Jan. No. 3 do $1.08¾; rejected 91¾@92c. Corn quiet but steady 39¾@39¾c. cash 39¾@39¾ Dec. 39¾ Jan. 43¾c. May. Oats firmer 33¾c. cash; 32¾c. Dec; 32¾ Jan; 36¼c. May. Rye steady 72¾@73. Barley firmer 83c. Timothy seed $2.30@2.38. St. Louis.—Wheat—No. 2 red, fall, $1.29¾ cash; $1.30@1.30¾ Dec.; $1.33½@1.34¼ Jan.; No. 3 do. at $1.23¾. Corn declined a trifle, 38½c. cash. Oats, 32½c. Rye, 73½c. Barley, choice, 85@90c. Hogs, Yorkers, $3.50@3.60; packing, $3.65@3.80; butchers' to select, $3.80@3.90. Cattle active; choice to fancy shipping steers, $4.50@4.75; extra-heavy export steers, $5; fair to prime, $3.50@4.40; feeders, $3@3.60; stockers, $2.50@2.90; cows and heifers, $2.15@3.25; corn-fed Texans, $2.75@3.75; grass do., $2 25@3.25. Sheep strong and scarce; fair to good muttons, $3@3.50; choice to fancy, $3.60@3.85. Cotton—middling, 11½c.; low middling, 11¼c.; good ordinary, 11c.

Toledo.—WHEAT—No. 2 red winter, spot, $1.31¾; No. 2 Dayton and Michigan red, $1.31; No. 3 do., $1.28½; amber Illinois, $1.34. CORN—Lower; No. 2 at 43½c.; new, 42½c.; rejected, new, 41c. OATS—No. 2, 34c.; rejected, 33c. Clover seed steady; prime, $5.30; No. 2, $5.04. Dressed hogs, $4.75.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Nov. 29.

BEANS AND PEAS.—The market for beans is too tame for a full range of values to be given. Receipts are heavy and consequently there is a strong effort to work off parcels a shade below prime in quality. Quotations are for truck lots of mediums and marrows. Kidney and other fancy unchanged, but the demand is not active and they may follow the standards. Green peas quiet, though receipts have fallen off. $1 50@1.95. Southern B.E. peas have rather more call at the easier figures of $2.25@2.30 ₱ 2-bush. bag. Marrow beans, $1.65@1.85; medium, $1.60@1.75; pea, $1 75@2.00; white kidney, $1.95@2.15; red do., prime, $1.85@2; poor, $1.50@1.80; black, $1.85@2.00.

Receipts of beans for week, 14,708 bush.; exports, 1,183 pkgs.

BEESWAX.—The low prices latterly have caused meager shipments forward from the South, and of Western lots the arrivals are moderate, consequently prices are now working up. Sales at 24@25½c. for Western and Southern. Exports since Jan. 1st, 94,418 lbs.; same time 1878, 152,057 do.

BROOM CORN.—Manufacturers have been eager buyers, and the supplies of choice stock have been closely taken; hurl. is worth 5@7c. for good to choice, and 5½@6c. for common to fair; brush and short broom at 7½@9c. for choice, and 5@7c. for common to good.

BUTTER.—Another week of quiet is to be noted. Trade in the early part of it was about at the closing figures in our last. Inside rates, are the lowest we hear of for any grade of state showing table merit. There has been of late a pretty solid attempt on the part of buyers to bond prices from their high limits. Holders, however, have exhibited their strength by refusing to make concessions that would be bad for future business. At the moment it looks as though retailers have more pressing want of stock, and with any general attendance it would not be surprising if quotations were to recover a full range if not an improvement in extra styles. The scarcity of line is still a power for owners. Those who have to break off fresh ends and choice tops of dairies will only do so when the rest of the line will not suffer badly in a possible average. Liberal receipts of Western will soon appear and will be welcomed by a class of buyers whose trade is seriously interrupted by restrictive quotations. Western creamery now outsells any mark of state. Factory turns out better and prices ought to send more this way. The high markets of late have tempted large quantities of oleomargarine into use. Butter dealers are about to try and enforce retailers to sell it for what it is as some of the latter are putting it out as genuine fair grade butter. The movement is a just one for consumer and merchants, especially for the latter as strict legislation prevents imposition on the part of wholesalers. We note state, pails and tubs, small dairy and fresh ends, 31@32c.; best lines, 28@30c.; good to prime, 27@28c.; fair to good, 24@27c. firkin and tub single dairies, choice, 29@30c.; do. fair to prime, 26@28c.; do., firkins, choice dairies, 28c.; do. fair to prime, 25@27c.; Welsh tubs, 23@28c.; poor State, 20@23c.; creamery, finest, 36@37c; good to prime, 34@35c.; sweet cream, 25@26c.; poor to good, 27@33c.; Western imitation cream, 23@30c.; dairy, fresh, extra, 28c.; poor to good, 18@22c.; factory late made made, 23@24c.; poor to good, 14@21c.; very poor Western, 10@12c.; Rolls, 20@24c.

Receipts for week, 27,682 pkgs.; do., exports, 1,600 do.

CHEESE—This has been a very dull week. Nothing encouraging from the other side, and shippers holding off or buying small lots as may be needed to replenish assortments, and only 8,000 boxes shipped this week. Home demand has been without much life. Receipts have not been large, and prices steadily held.

Quotations are for State factory: Fancy, 12¾@13c.; good to prime at 11¾@12½c; fair to good, at 10¾@11¾c.; half-skimmed at 9@10c.; skimmed at 6@8c. State farm dairy: Fine at 12@12½c.; good to prime 10½@12c.; fair to good at 9@10½c.; skimmed at 6@8c. Wis. factory: Fine at 12½@12¾c.; good to prime at 11½@12¼c. Ohio factory: Cheddar, fine, at 12¼@12¾c.; do., fair to good, 10@11c.; flat, fine, 12¼@13c.; flat, good to prime, 11@12c.; flat, fair to good, 10@11c. half-skimmed, 9@10c.; skimmed, 6@8c.

Receipts for week 43,372 boxes; exports do. 15,000; do.

Cable quotations 63s. Steam to Liverpool 35s.

COTTON.—The foreign advices have been more encouraging and speculation has been extensive, the market leaving off strong at 12.55@12.57c. for November; 12.49c. for December; 12.61c. for January; 12.79c. for February; 12.96c. for March; 13.10@13.11c. for April; 13.26@13.27c. for May, and 13.39@13.41c. for June.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

Strict good ordinary	11¾	Middling	12 3-16

DRIED FRUITS.—Apples come in slowly; Southern lots are especially wanted, and sellers have a decided advantage. Evaporated stock is quick and oftener at outside prices. Peaches are in full demand and rule strong, as also small fruits generally.

Apples—New North Carolina, are: 6@8c. for fair; 8½@9c. for choice; 10@10½c. for fancy sliced. Patent evaporated apples, choice, in cases, 14½@15c.; do. fair to good, 12½@13½c.; N.Y. State sliced, new, 8@8½c.; quarters, choice, 6½@7c.; western quarters, common and old, 4@4½c.; new southern quarters at 4@4½c.; new N. C. peeled peaches at 16@17½c., do. Georgia, 13@16c. Peaches, Delaware evaporated, peeled at 25@28c.; do. unpeeled at 13@15c.; new halves at 8c. Blackberries at 10c. for new. Raspberries at 28@29c. Pitted cherries at 15@20c.

EGGS.—Receipts for the week, 8,831 bbls.; do. last week, 10,932 do. There is a general complaint about the mixed condition of supplies. Retailers do not take hold to the extent they would if lots were running uniform. A good many Western called fresh will only bring 20@21c. Southern fresh will soon have a place. Shippers should pack them in uniform barrels or cases.

Near points fresh, doz., 20@27c.; State and Pa., 21¼@23c.; Canadian 19½@20c; Western, choice 22@22½c.; off grades, 18@19c. State limed, 17@18c.; Western, 16@17c.; Canadian, 17@17½c.

FLOUR.—A feature of the market this week has been the liberal drafts made upon the supplies made upon the supplies by exporters. Large shipments have been made to West India and South American markets, comprising full lines of winter wheat grades and of city mill product, and some 60,000 bbls. have been taken for European ports. Prices have worked up a little.

Latest sales are at: $5@5.50 for inferior to choice superfine State; $5.65@5 90 for inferior to good extra do., odd lots and lines; $6.00@6.25 for good to very choice do.; $6.10@6.65 for inferior to very fancy superfine Ind., Iowa, Michigan, &c.; $6.70@6.90 for inferior to good shipping extra do., and $6.90@6 25 for good to choice shipping extra do.; inferior to about choice white wheat extras, 16.00@6.85; choice to fancy do. at 16.90@8.00; red and amber winter wheat, inferior to fancy trade and family, at 16.00@7.75; round hoop Ohio, $5.75@6 15, and trade and family brands of do. at $6.25@7.75, the latter rate for very choice; St. Louis at 16@7 for inferior to very good extra; $7 05@8.00 for very good to fancy; Minnesota clear, very inferior to fancy, $5.60@7.00; Minnesota "straight," very inferior to fancy, $6 10@7.60, and patent poor to very fancy at $6 75@9 00; unsound stock at from $3.85@5.75; city mill extra at 16.70@7.00 for about fair to choice for West Indies (fancy do. quoted at higher figures); do. for England, $5.70@6.15 for poor to choice; do. trade and family extras, $6 85@7.65; do. for South America, $6.75@7.25; No. 2 at $4.25@4.85 for poor to fancy.

BUCKWHEAT—Is at 61@63c. for prime, and buckwheat flour at $2.30@2.60.

FRESH FRUITS.—Apples are going into store freely, and dealers count upon an early advance if the weather does not turn adverse. Greenings look rugged this fall. Spys, Baldwins and a temporary offering of Spitz, are being used for city wants. Shippers continue to fill special steamer space. They have to take a little chance in quality, fearing that new figures may shut them out suddenly. Besides, they yet have the advantage of hauling from boat or station. Cranberries have led a good trade and prices have become quite set, as the supply is not likely to be oppressive this year. Grapes are dull; prime Catawbas scarce. Florida oranges have no sale; most of them are small and green, and shippers make nothing by sending them.

Apples—Kings, State, good to choice, ₱ bbl., $3; Baldwin, $2.25@2.50; Spitzenburg, $2.50@3; Greening, $2@2.25; winter mixed, good to choice, $2@2.25; poor to fair, $1.25@1.75. Cranberries—Cape Cod, fancy, per bbl., $7@7.25; good to choice, $6.25@6 75; fair to good, $5@6 25; Eastern, huge round hoop bbls., fancy, $6.50@7; do., fair to choice, $5@6; Jersey, fancy, per crate, $1 87@2; good to choice, per crate, $1.50@1.75. California has an opening for pears and is sending a good offering of the styles that have made a winter market here. Winter Nelis, Glout Morceau and Easter Beurre are very salable at $4 per case; fine Boston Duchess and B. d'Anjou in light supply at $4 per bush. Cal. quinces of good size, $3 50 per bush. Grapes—Catawba, State, choice, per case, $2 25@2.50; do., poor, $1.50@1.75; do., loose, per lb., 3@5c.; Isabella, State, 18 3-lb. boxes, $1.25@1.75; bulk, per lb., 2@3c. Oranges—Fla., choice, per ½ bbl. crate, $3.50@4; fair, $2.50@3; choice, per bush. crate, $2.50@2.75; fair, $1.50@2. Peanuts, Va., new, hand-picked, per lb., 5@5½c.; new, extra prime to fancy, 4½@4¾c.; do., good to prime, 3½@4c.; shelled, new, 4@4½c. Chestnuts, not wanted. Hickory, shellbark, $1@1.12. B. walnuts, 40@50c.; Pecan nuts, per lb., 9@10c.

Exports for week, 16,675 bbls. apples; since Jan. 1, 210,585 do.; same time 1878, 134,482 do.

FURS AND SKINS.—The collective demand is not so encouraging for small lots as it was last season, and the outlook for irregular parcels of cheap sorts is poor.

No. 1 quality,	Nor. & East.	W. & S. W.
Otter, each	$5.00@7.10	$4.00@5.00

Skunk, half-striped		35@ 40
Skunk, striped		15@ 20
Skunk, white		8@ 10

GRAIN.—The English markets have been less encouraging for wheat at current prices, which have been held up chiefly by speculative manipulation. The exports this week scarcely reach 3 000 bushels. Sales are of No. 1 white at $1.45¾; do. for Nov. at $1.45¾@1.45¾; do. for Dec. at $1.45¾; do. for Jan. at $1.49; No. 2 red at $1 46@1.47¾; do. for Nov. at $1.47@1 47¾; do. for Dec. at $1 47¾@1.47¾; do. for Jan. at $1.50¾@1.51; No. 1 amber at $1.46¾@1.47; No. 2 winter at $1.44@1 46¾; new York No. 2 spring, at $1.37¾@1.37¾; No. 3 spring at $1.31@1.33. Rye strong at 70c. for Canada in bond and 91c. for No. 2. Corn is active, and the exports for the week are are 780,000 bushels, closing firm at 60¾@61c. for No. 2; 60¾@61c. do. December; New York steamer mixed at 59¾c.; do. December at 58¾c. Oats have been received very moderately, and speculators have taken hold of them, paying an advance; latest sales are of New York No. 1 white at 48c.; New York No. 2 white at 46¾@47c.; do. for December at 47c. New York No. 3 white at 45¾@46¾c; New York No. 1 at 46c¾; New York No. 2 at 46@46¾c.; New York No. 3 at 45½c.; white Western at 47@48¾c.; mixed do. at 46@47¾c.; white State at 48@49c.; mixed do. at 46¾@48¾c.

HAY AND STRAW.—Receipts are very small; straw has made a sharp advance, and there is a slight improvement on refuting grades of hay; sales are 50@55 for shipping hay; 60@75 for medium to 75@80 for prime. Straw is at 90@95 for long rye; 60@65 for short rye, and 50@55 for oats.

Exports for week, 400 bales. Since Jan. 1st, 65,350, or 15,000 more than for corresponding period last year.

About 10,000 bales of hay were damaged at the recent burning of the 6th Av. R. R. stables. Shipping grade of hay received a temporary firmness in consequence.

HONEY—The market is firm with an upward tendency, particularly for single comb bxs. Single comb ₱ lb, 18@19c.; double and larger, 15@17c.; buckwheat, 13@15c.; clover extracted, 12@14c.; strained, 9@10c.

HOPS.—Exporters have shown little interest this week, and trade from brewers has been moderate, but holders have been confident and have refused to make concessions.

Quotations are for New Yorks, new crop, choice, 45@47c.; New Yorks, new crop, medium, 40@43c.; New Yorks, new crop, low to fair, 35@37c.; Eastern, new crop, 35@45c.; Wisconsin, new crop, 35@45c.; Yearlings, 7@12c. Olds, all growths, 4@11c.; Pacific coast, new, 40@45c.; Pacific coast, olds (nominal), 8@14c.

LEATHER—Has further advanced and is quoted at 27@31 for light hemlock; 27@31 for middle do.; 27@31 for heavy do. and 25½@28 for good damaged.

OIL-CAKE.—Western is higher and quoted at $33.50 ₱ ton.

PROVISIONS—Have advanced on a brisk speculative trading. Mess pork quoted at 11.35@11.50 for November and December; $11.40@11.55 for sellers' option, old or new, for Jan.; $12.90@13 for new do. for do. Bacon at $6.45 for long clear and $6.75 for short clear. Beef at $10.50@11 for plain mess; $11@11.50 for extra mess; $23@25 for extra India mess, city brands. Beef hams at $15.50@15 75. Tallow at 7@7¼c. for prime. Stearine at 7¾@7¾c. for prime.

POULTRY AND GAME.—Owners of dressed poultry missed their customary Thanksgiving harvest this time. The earlier shipments of turkeys would have done well if stock had not been of such commonplace quality and size. Buyers were on hand by Tuesday, and good weights, 10@11 lbs., started at 14@15c. for nice waxy scalded and standard dry-picks. While the search for such grades was going on, supplies began to pile in by express and regular freight, and kept up until late Wednesday p. m. The market broke by Tuesday afternoon, and 12c. was extreme for selections, while 10@11c. bought good, useful stock; so we have only an ordinary market to note for a holiday. Still, there is some consolation in the fact that easy prices may tend to open a general demand, and the surplus of future supplies will find an easier outlet than if special rates had ruled. A good deal of the brightest stock has gone into cold storage; still there is a large offering, and prices were seldom if ever as low before as the annexed.

Turkeys, Jersey, good to prime, 8@9c.; State, Northern Ohio and Pennsylvania, prime, 8@9c.; other Western, prime, 7@8c.; fair to good, 6@7c.; Philadelphia, dry-picked, 10@11c.; do., chickens, 10@11c.; do., Jersey, per lb., 8@9c.; do., State, Mich., Northern Ohio and Penna., prime, 7@8c.; other Western, prime, 6@7c.; fair to good, 5@6c. Fowls, Phila., dry-picked 9@10c.; Jersey good to prime, 7@8c.; State, do., 6@7c., Western, do., 4@6c. Ducks, Phila., dry-picked, 10@11c; Jersey, 8@9c.; State, 7@9c.; Western, 7@8c. Geese, Phila., dry-picked, 9@10c.; N. J., 8@9c.; State, 7@8c.; Western, 6@7c.; squabs, white, ₱ doz., $2 25@2.50; do., dark, $1.25@1.50.

Game has sold unusually well; quotations, however, will be apt to tone down after the holiday flush subsides. Canvas-backs, $1.75@2 50; red-heads, 40@75c.; Mallard, 60@75c.; common and Teal, 20@40c. The lowest rates are for Norfolk birds.

Quail, trapped, ₱ doz., $2.25@2.50. Partridges, State, prime, ₱ pair, 85@90c.; Western, 75c.; soft and drawn, 50@60c.; Grouse, prime, 85c.; Woodcock, State, ₱ pair, 60@75c.; English snipe, ₱ doz., $1.50; plover, $1.50; Tame pigeons, shot, ₱ doz., $1@1.25; Rabbits, ₱ pair, 25@30c.; Hares, 30@35c.; Mink, venison, short saddles, ₱ lb., 11@13c.; State and Western, short saddles, 9@11c.; whole deer, 7@8c

Live poultry has no demand above 8c. for fowls or chickens; 8@9c. for turkeys; ducks, 40@45c.; geese, $1@1.37.

SEED.—Clover has a good demand and is selling at 8¾@9¾c. for western and 8¾c. for extra choice. Timothy is at $2.60@2.70. Flax seed at $1.75@$2.

VEGETABLES.—The offering of potatoes is large and there are many selections at inside figures. Potatoes, Peachblows, d.-h., 1.87@$2; Snowflake, d.-h. $1.37@$1.50; Early Rose, Maine, d.-h. $1.75@$2. State, $1.50@1 62; do. in bulk, 1.25@1.50; do. Peerless, $1.25@1.37; New Jersey Peerless, 87c.@1 1; Sweet potatoes, 2.25@2.25; squash, marrow, ₱ bbl., 75c.; do. Hubbard, $1.2 @1.50; cabbage, per 100, $4@6.00 red do., cabbage, $5@7; onions, white, per bbl., $2 50@2.75; do. yellow, $2.50@2.75; do., red, $2.25@2.50; do., Chester, $2@2.25; beets, N. J., 75c.@$1; Russia turnips, 75c.@$1; carrots, pumpkins, per 100, $2@6, cauliflower, ₱ bbl., 75c.@3.50. celery, per doz., $1.

Exports potatoes for week, 2,982 bbls. Of onions 55 do.

WOOL.—There are quick buyers, and the market would be swept were there free sellers. The auction sales abroad have shown that there is margin for a further advance here to admit of free importations from the other side. All grades of domestic fleeces are getting much reduced in stock. We again advance quotations. Quotations are for domestic fleeces:

Ohio, Pennsylvania and Virginia—XXX and picklock 5 @51c.; XX, 51@5 c.. X, 51@52c.; No. 1, 52@55c.; No. 2, 47@ 4 c.; common, 40@41c; combing, 48@52c.

New York, Michigan, Indiana and Wisconsin—XX 42@47c.; X, 42@47c.; No. 1, 49 51c.; No. 2, 44@48c.; common, 38@42c.; combing, 46@50c.

Iowa, Vermont and Illinois—X and XX, 42@48c.; No. 1, 47@51c.; No. 2, 41@44c.; combing, 46@48c.

Missouri, Kentucky and Tennessee—Washed fleece, 45@50c.; unwashed fleece, 35@40c.; unwashed combing, 33@40c.

LIVE STOCK MARKETS.

NEW YORK, Saturday, Nov. 29.

BEEVES.—Receipts for the week, 11 511 head; do. last week, 10,633 do. Poultry week generally operates against trade at the drive-yards, but this week has been an exceptionally sure one on sellers. Sometimes supplies have been regulated down to a point which allowed owners to come out whole, even with a slack demand. This week, with quotations off ¾c. compared with Wednesday's rates, hardly a drove was sold that did not lose money. The extremely low prices of poultry have cut into the beef trade. If an item of food obtains the compliment of being "cheaper than beef" there is a general rush for a change. The offering was well sold up at the close, as the low prices quoted proved attractive to wholesale butchers. Some long lines of Cherokees sold at 7¾c., fair quality. Common to fair native steers, 7@8½c., to dress 55@56 lbs.; good to prime, 8¾@9¼c., to dress 56 lbs.; extra, 10c., to dress 56@57 lbs.

SHEEP AND LAMBS.—Receipts for the week, 36,439 head; do. last week, 29 389 do. Heavy receipts struck a market largely supplied with other stuff, and prices rule weak. Sheep, 3¾@4¼c. for common to good; 5@5¼c. for extra. Lambs, 4¼@5¾c. for poor to choice.

HOGS.—Receipts for the week, 42,361 head; do. last week, 29,795 head. Receipts are in excess of packers' wants with the soft, fickle weather at the close, and 4¾@4¾c. are full rates for good to prime. N. J. prime, light, 5@6¼c.; medium, 5¼@5¾c.; heavy, 4¾@5c.; city dressed, 4¾@5¾c. Pork tenderloins, 8@8¾c ₱ lb., in cases.

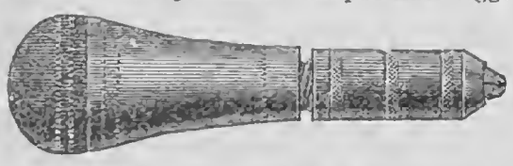
VEAL CALVES.—The market is quiet being rather overstocked. Choice N. J. and Bucks Co. live bring 7c. for small lots; other grades calves 5½@6¾c. fair to good, 5@6c.. Heavy Mount Holly dressed 6@6¾c. 300 to 350 lbs. Buttermilk 4@5c, grass 5@5½c.; hot dressed fair to prime 7¾@10c. ted. Grass hog dressed 3½@4¾c.

MILCH COWS.—Receipts continue quite liberal and include some attractive heads In fact, the average quality of single cows this fall has been much better than when stock could be pastured and wintered cheaply. Trade is not active but there is a steady and better range of 40@60 the latter for fine singles.

Reading for the Young.

A CONCENTRATED TOOL CHEST.

MY DEAR NEPHEWS:—There can be no doubt that your uncle is growing young again. Yesterday was rainy, and I passed the time in-doors Lying on my study table was this little Tool-Holder, and Hand-Vise, both sent to me from THE RURAL Office. In a polite note the publisher begged



my acceptance of the present, addlug "that if I would try them and tell him what I thought of their utility, he would feel obliged." It was very kind of him, and I thought the least I could do was to try them. Alas! Those innocent-looking tools made me loose the entire day. I'm going to tell you about it, and take a mean revenge on THE RURAL.

The Tool-Holder is as you see, a nicely polished case of hard maple, hollow, and screwing together. In it are some twenty cast-steel tools which I found to include ten brad awls of various sizes, a gouge, wood reamer, iron reamer, harness needle, screw-driver and scratch awl. The jaw for holding these tools is a patent adjustable affair that spreads wide enough to clasp and hold firmly an eight-inch file, or shuts close enough to hold a cambric needle. The hand-vise is just as handy a piece of mechanism as one could wish.

It occurred to me that first I would show them to John, my hired man, and that was my first mistake. He suggested that I try the harness needle on some repairs. After three hours' work I had mended everything in the stable, and started for the house for dinner. I showed the tool-holder to your Aunt True. It was just what she had been looking for. Remembering my experience with John, I offered to make her a present of both articles, as I had something important to attend to. She wouldn't listen to that proposition, but suggested I should show her how the tools were used. That finished me. For four hours I was busy, mending shelves, bells, and a dozen other things, I was glad enough to escape. During the evening I wanted to do a little mending in my study and looked about for the tool-holder. It had disappeared! I "raised the roof" and declared I never could keep anything! At this John came in, looking sheepish, and confessed that the thing was so handy, he thought he would keep it at the barn, "As you know, Mister True," he said, "I can use it to better advantage than yourself."

That is the end of my Tool-Holder. Now, boys, if you want a quiet time, and don't care to be a "handy" boy, and do the mending for the entire family, *don't* do as THE RURAL asks you, viz. Send them five subscribers, at $2.00 each, and receive the Tool-Holder and Hand-Vise for your trouble. UNCLE TRUE.

THAT BROTHER OF MINE.

Or, Horticulture and Fun In-doors.

"Do brother Will, come and see this Hyacinth bursting the frozen earth in my cocoa-nut vase!"

"Yes, here it is Bliss, The cultivation of the Hyacinth all in a nut shell. But isn't the flower bud coming out like a regular *scape goat!* and the slight freeze, he has escaped unhurt; but how is your Wandering Jew in old Beauty-cow's horn, on the window sill?"

"Oh! my cornucopia is ruined. The Tradescantia is frozen; but I shall try the dark closet which restored my Geraniums last year."

"Yes, sister, a dark closet is good for frozen plants, preserves, and other sweet things like naughty girls—and boys."

"You speak from experience brother, but I think it was the preserves rather than the darkness that brought you out sweet-tempered from your lock-up."

"Yes, and who knows but that striped straggling Israelite of yours may strike a new *streak* and *wander* in the dark, as I did when I found those fruits—fruits of perseverance, and come out as variegated as I did, needing a bath, too."

"Come, brother, it is too cold for the plants in the window at night, make me another corner bracket near the fire. Here is a square box; while I hold it up inverted with one corner fitting into the corner of the room, you drive a nail through each side into the wall. I can cover it with moss and fasten a moss-covered branch with three twigs, beneath it apparently to support it. You will have to stand on something, for the higher we place the bracket, the better; you know the warm air rises."

"Yes, and that is why I grow hot-headed as I grow older, if father is right in what he says."

"I hope you'll keep growing, brother, till *rarefaction* will make you cool-headed, and the heat will strike at the right place to make you warm-hearted. It makes little difference about the pedal extremities if they are in the right path."

"Hurrah for the big words. What does pedal mean?"

"Pedal means foot—pedestal, pedestrian, peddlar, don't you see they all bear some foot significance."

"Oh! yes, now I understand why peduncle means the stalk of a flower. But tell me, Bliss, why is Uncle Mark our ped-uncle?"

"I don't know unless it is because he holds up the flowers for the Horticultural Club to examine.

Now, the moss is beautifully arranged and I hope my Tradescantia will revive and wander over it as naturally as over the moss-grown rocks in its native woods." MRS. M. L. S.

WINTER EVENINGS ON THE FARM.

ARE not long winter evenings a delightful season on the farm? What a pleasant picture one may behold on looking into a cozy farm-house some fine evening of the coming winter or even now in late fall. Around the fireside are gathered the members of the family. The farmer is perhaps reading aloud from the family paper while the housewife is busy at some light work. The younger members of the family are engaged in getting their lessons for to-morrow's school, reading and playing; or it may be the larger girls are doing some fancy work while their brothers are making brackets, picture frames etc., on the scroll saw for what home is complete without one of these machines? It is really astonishing what ornamental and useful articles an ingenious boy with a scroll saw can make. Will not some of the RURAL Cousins tell us what they are making these evenings with their scroll saws? This would be a new topic for them to write about, and they could undoubtedly give one another many useful hints on the subject.

Social intercourse with neighbors and friends should also be cultivated these long winter evenings. Where the tone of society is pure nothing is more refining and educating or better calculated to arouse a healthy ambition in the young, than to let them mingle with neighbors and friends in a social frolic occasionally. Let their games be directed by some self-possessed, good-natured and kindly aunt for whom all have respect and everything will go smoothly. While the writer was a boy among the New Hampshire hills. it was customary for neighbors to visit each other frequently, and I think it resulted in much good for the young folks. Such pleasant visits not only cultivate a kindly feeling, but they make childhood happier and fill the memory with life-long, treasured recollections. F. H. D.

Steuben Co., N. Y.

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK AND COUSINS:—Our locality was visited by a refreshing rain about the middle of August. Which to the parched earth was like a cooling draught to a thirsty person in a mid-summer day. We, prompted by experience, took advantage of the rain and commenced planting, and have long since gathered the fruits of this little seasonable effort. We had fine watermelons, squashes, and cucumbers, and will soon have other vegetables that grow here all winter. Okra and butter-beans are bearing splendidly. The melons and cucumbers we make doubly useful as they are valuable for picking and preserving. The sunsets here are lovely. We wish our cousins could see the retiring sun with its streams of gold and lakes of silver, as viewed from our seaside home; it is a view beautiful beyond description. We have heard persons remark that it could be favorably compared to the sunset of Italy of which so much has been said and written. Many thanks to Cousin Ivy for his sympathy. His description of the fading forest reminds us of an expression of one who has long since found the rest of saints, namely that the forests of the Eastern and Middle States in autumn and the dying dolphins might in a certain sense be compared. Although nature is wearing such a spring-like appearance here, the flocks of birds and a high northern wind reminds us that a change of seasons is approaching. Many thanks to Uncle Mark for the grape seeds. We have them planted according to directions. The RURAL and Rural Cousins have the kind wishes of the

Refugio, Tex. TWO SISTERS.

UNCLE MARK—Dear Sir: Please accept my thanks for the engraving. It is very nice, and I think you are very kind to your nephews and nieces. I was much surprised on receiving the grape seed, and I hope that I shall have success in raising grape vines from them. I have some thirty varieties of house plants. Our fair is a thing of the past, but Floral Hall was gorgeous with floral displays of both cut flowers and house plants. All of the other divisions in that hall were full also, and the organs dispensed music to the crowd. Agricultural Hall contained the usual display of grains, fruits and dairy products, with the exception of corn, of which but little was present. In the baking department was a ginger-cookie old lady, with her apron and sun-bonnet, and lunch-basket on her arm, and a stick over her shoulder with strings of cookies, going to the fair. This piece of art work received first premium. In front of Mechanical Hall was a rocking-churn power. They said of it that one could rock the baby and do the churning at the same time, thereby killing two birds with one stone. In the Poultry House was a pair of goats that attracted a good deal of attention, especially from the children. Among the stock near the Jerseys was an India or Sacred cow; it had a hump on its back like a camel. Well, as we have reached the secretary's office, we will pass out through the gate. Yours truly,

Allegany Co., N. Y. EUSEBIA A. DICKINSON.

DEAR UNCLE MARK:—I will write and tell you how I sowed the grape seed you sent me. I got papa to put two partitions in a box three inches deep, nine inches wide, and fifteen inches long. Then I filled it with a mixture of garden soil and leaf mold, and in this I sowed the seeds. I am now patiently waiting for them to come up. I like to read the letters from the cousins very much. Where are Slayer-of-Conceit and Mad-Cap Molly and Rocky Montain Joe? I never see any letters from them. I think I must bring my letter to a close. My love to all the cousins. Your affectionate niece,

Bruce Co., Ont. AMANDA BURNHAM.

DEAR UNCLE MARK:—I would like to join your Horticultural Club. I am eleven years old. I had a garden last summer, in which I grew beans, Petunias, Batchelor's Buttons, etc., and I also raised some watermelons and muskmelons. I sold some of my melons and made about a dollar by it. I like to read the letters from the cousins very much. If this is printed I will write again.

St. Clair Co., Mo. WIGHT BINGTON.

The Puzzler.

A MALTESE CROSS.

Top—A name for a cat; an article used in the laundry; a consonant.

Right—A sort of beer; a cape of N.E.; a personal pronoun.

Bottom—A city of Japan; to obtain; a consonant.

Left—An arbor; a fish; a consonant.

Center, Top—An animal. Right—A period. Bottom—A lady's name. Left (when read up)—A lady's name.

Downwards means expelled, and across means straying.

☞Answer in two weeks. LITTLE ONE.

ACROSTICAL ENIGMA.

My first is in plate, but not in dish;
My second's in meat, but not in fish;
My third is in pie, but not in cake;
My fourth's in the leaven used in the bake;
My fifth's in the pantry, not in the hall;
My sixth's in the milk-room, not at a ball;
My seventh's in the chamber, weaving warp;
My eighth's in the parlor, playing the harp;
My ninth's in the laundry; my tenth's in a chest.
My whole is a riddle I leave you to guess.

☞Answer in two weeks. MARY WALEY.

HIDDEN VEGETABLES.

1. Nic R. essayed to speak.
2. Green, stagnant water breeds disease.
3. Did you ever spin a chain.
4. In an old caul I flowered.
5. When divers go below they run much risk.
6. Beg her kindly.
7. I have a gum boil.
8. The beggar licked the rowdy.
9. Percy M. linked his fate.
10. Shall other means be provided.
11. The cook raved.

☞Answer in two weeks. LITTLE ONE.

DICKINSON'S ENGLISH.

ONE thing our Bible revisers know enough to abstain from attempting: they will not undertake to improve the English of the old version. The words of one of the most accomplished among them, the Rev. Dr. Chambers, would probably be assented to by all of them: "It is neither prejudice nor thoughtlessness which affirms this book to be the first of English classics. Indeed its pages speak for themselves. In simplicity and strength, in the union of Saxon force and Latin dignity, in idiomatic ease and rhythmic flow they have no superior."

This is not the narrow judgment of a devotee; literary men of all faiths and of no faith agree in pronouncing the Bible a model of literary excellence. Mr. Huxley, who is himself master of style, says, "It is written in the noblest and purest English, and abounds in exquisite beauties of mere literary form." Lord Macaulay and Matthew Arnold are equally positive in their praise. Indeed not the least of the benefits that our English Bible has conferred upon the people who have read it is the influence that it has had upon the language, in preserving it from corruption. "Perpetually in the hands of the people," says Dr. Chambers, "used in public and private worship, resorted to in all controversies, employed in schools and education, in short, a daily companion from the cradle to the grave, it has so shaped the tastes and judgments of men that, however for a time misled, they were always in the end recalled to the older and better model, and renewed their adhesion to the pure well of English undefyed."

The high estimate which is placed by them, and by most sensible men, upon the English of the Bible has not, however, been universally held. Now and then a tidal wave of euphuism or turgidity has swept over our literature, big words and stilted expressions have come into fashion, and the victims of this verbal epidemic have sometimes been filled with a great disgust for the simple Saxon style of the Bible, and have cried out for a new translation.

One of the worst cases of this distemper was that of the Rev. Rodolphus Dickinson, a clergyman of the Episcopal church in this country who, so long ago as 1833, made up his mind that the present English Bible was no longer to be endured on account of its inelegance, and set about making a new translation. This is the way he discourses about it, in his preface:

"The lapse of centuries has produced a revolution in the English language, requiring a correspondent change in the version of the Scriptures: and, I may add, that the errors in grammar and rhetoric, the harsh and indelicate expressions, dispersed through the generally adopted text, demand amendment. The style of that translation, regarding either its propriety, or purity, is, to a great extent, obsolete. There is much inelegance and inaccuracy, in the selection of words, the structure of sentences, and in every compartment (*sic*) of composition. Elementary expressions, individual and complex phrases of various description, pervade it, unknown to the existing advanced state of literature. If they were admissible, at the period of that publication, it is sufficient to aver, that they are now exploded."

Mr. Dickinson now breaks forth in a panegyric upon "the existing advanced state of literature" and so forth: "The mansions of refinement are less haunted by the spectre of decayed or impoverished learning. Cultivated life extensively recoils from the familiar survey of relics that belong to the quiet of the tomb. They are fast ceasing to deface the exquisite elegance of the literary and theological landscape. Luminaries more effulgent enlighten and adorn the summits of the social state. A renewed lustre illumines the vales," and so on. As a consequence of this advancement, Mr. Dickinson thinks that it is high time we had a more mellifluous and magniloquent Bible. "While various other works, and especially those of the most trivial attainment, are diligently adorned with a splendid and sweetly flowing diction, why should the mere uninteresting identity and paucity of language be so exclusively employed in rendering the word of God? Why should the Christian Scriptures be divested even of decent ornament? Why should not an edition of the heavenly institution be furnished for the reading room, saloon and toilet, as well as for the church, school and nursery? for the literary and accomplished gentleman as well as for the plain and unlettered citizen?" If "the train of selfish, ordinary composuists," (*sic*) should prevent this consummation, Mr. Dickinson predicts that "the heavenly balm will be extensively untried; and the deprivation may cause many a valuable patient to be successfully visited by the lethargy of spiritual death."

This dire calamity he will do what he can to avert. Therefore he offers his translation of the New Testament. A few quotations from it are quoted, by way of showing the Revision Committee how not to do it.

"Broods of vipers! who has privately admonished you to fly from the approaching vengeance! Produce, therefore, the appropriate fruit of reformation!"

"When thou art beneficent, let not thy left hand be conscious of what thy right hand performs." "Contemplate the lilies of the field how they advance."

"Seek first the empire of God and the integrity he requires, and these I be superadded to you. Be not, therefore, anxious for to-morrow; since that will claim correspondent attention."

"At that time Jesus took occasion to say, I entirely concur with thee, O Father, Lord of heaven and earth, because having concealed these things from the wise and intelligent, thou hast revealed them unto babes."

"Then his disciples approaching said to him, Art thou conscious that the Pharisees were offended when they heard this observation? But he answering said, Every plantation which my heavenly father has not cultivated shall be extirpated. And Peter replying said to him, "Elucidate this parable."

"His master said unto him, Well done, good and prudent servant! You were faithful in a limited sphere. I will give you a more extensive superintendence; participate in the happiness of your master."

"Now Jesus, replete with the Holy Spirit returned from the Jordan. . . . And his renown pervaded all the adjacent country. And he instructed in their synagogues with universal applause."

"Salt is salutary; but if the salt has become vapid, how can it be restored?

"Moreover there was a Pharisee whose name was Nicodemus a senator of the Jews. He came to Jesus by night and said to him, Teacher, we know that thou art an instructor emanated from God; for no one can achieve these miracles which thou performest unless God be with him. Jesus answered and said to him, Indeed I assure you that except a man be reproduced he cannot realize the reign of God. Nicodemus says to him, How can a man be produced when he is mature? Can he again pass into a state of embryo and be produced? Jesus replied, I most assuredly declare to you that unless a man be produced of water and of the spirit he cannot enter the kingdom of God. . . . Be not surprised that I announced to thee, ye must be reproduced."

"His brothers therefore said to him, Remove hence and repair to Judea that the disciples also may see the works that thou performest. For no one does anything in obscurity while he himself wishes to be in celebrity."

"For this the Father loves me, because I give up my life to be afterwards resumed. No one divests me of it but I personally resign it. I have authority to surrender it, and I have authority to resume it.

"There are numerous apartments in my Father's temple; if not I would have informed you."

"For corporeal exertion is of minor advantage; but piety is advantageous in all respects, having a promise of the present and of the future life."

"This is a correct remark that if a man ardently wishes a spiritual superintendency, he earnestly desires an honorable employment."

"And he said to me, it is accomplished. I am the Alpha and Omega, the commencement and the termination."

These resplendent gems of speech have been selected at random from the pages of this wonderful book. Writing equally fine can be found in almost every paragraph. Of course the man who perpetrated this thing honestly thought that he was doing the church a great service; he did not know that he was making of himself a laughing-stock. Johnsonian inflation must have been at its light when he was learning to write, and his style is an extreme illustration of its ridiculous pomposity. The Johnsonese had its day, but the people were soon as sick of it as they were of the continental currency, and willing enough to come back to plain English. And while they have in their hands a book like the Bible, no stilted or tawdry fashion of speech can ever long prevail.—*Sunday Afternoon.*

PERSONAL ITEMS.

Gen. Grant is 57
Gen. Sherman is 59.
Phil. Sheridan is 48.

Collections for Gen. Hood's orphan children amount to $15,000.

Gov. Long of Mass., is 41, the youngest Gov. the State has ever had.

Labouchere calls G. A. Sala the best after dinner speaker in England.

General Grant's father died at the age of eighty and his mother is still living.

Postmaster General Key loves to play cards and frequently has a game of solitaire.

General Ben Butler, in paying his campaign bills, finds a little item of "$18,000 for printing."

The historian Bancroft, who in his old age likes to ride horseback, is an enthusiast on the subject of music.

Queen Victoria has commissioned eight premiers and outlived all but Lord Beaconsfield and Mr. Gladstone.

Baring-Gould says:—"An English woman is lovely, a French woman is charming, a German woman is angelic."

Secretary Thompson, of the navy, goes to bed at half-past nine, and he is a good talker, especially on theological subjects.

A town in Iowa has been named Thornburgh, after the gallant major who fell bravely at the outbreak of the late Ute troubles.

Dennis Kearney, the agitator, has been arrested in San Francisco on a charge of attempting to extort money from a prisoner.

Gen. Schenck, ex-minister to England, has become rich, it is said, by the rise in Northern Pacific stock, which he once thought had ruined him.

Jefferson Davis, who is writing his contribution to the history of the late war, said a year ago, privately:—"I suppose our personal resentments all die as we grow old."

THE temperance women of Utica, N. Y., provide coffee at the polls on election days, as a regular thing, and this year they furnished 4,000 cupfuls, which left their treasury 79 cents behind.

Bachelor and millionaire Peter Goelet, of this city, aged 80, has just died, leaving property estimated anywhere from $10,000,000 to $20,000,000 to be divided between his nephews and nieces.

W. T. Blackwell, the tobacco manufacturer of Durham, N. C., pays, it is said, more taxes to his government than any other man in the world. They amount altogether to about $500,000 a year.

The son of Col. Colt, the revolver man, has just come of age, and into a net sum of upwards of $2,000,000 cash, besides the business and enough more property to save him from the poor house.

Thurlow Weed was eighty-two years old Saturday week. His health is remarkably good, and he continues to take a lively interest in all matters relating to religion, politics and the stock market.

Schuyler Colfax says he has laid up $40,000 from lecturing, since retiring from politics. He once advised General Grant to lecture, but the General feared he would speak to empty seats after the first night.

Mrs. Cornwallis West is rather charming than beautiful; she is a strawberry-and-cream, fair and freckled, irregular but expressive features, and a mass of rippling hair, cut like a boy's, in clusters of short curls.

Montreal rumors indicate that the Princess Louise will not return from England and that the Marquis will resign and go home. Another rumor says the Princess is about to become a Roman Catholic.

The Czar has a nice little income—a trifle over $25,000 a day. The Sultan gets $18,000 a day, the Emperor of Austria $10,000, the Emperor of Germany $8,200, the King of Italy $6,400, and the King of the Belgians $1,643.

Stanley, the African explorer, writing from the mouth of the Congo river, September 13, says he has equipped one expedition on the east coast, besides reconstructing another and making personal visits to several new districts. He has 15 Europeans and 200 natives with him.

There is talk of making Grant Captain-General of the U. S. Army at a salary of $25,000. The Congressman who will probably introduce the bill, is ex-Confederate General Joseph E. Johnston, who was Quartermaster General of the United States Army at a time when Grant was a captain.

Jay Gould, the other day, gave his check for $3,800,000 to Commodore Garrison for a controlling interest in the Missouri Pacific Railroad, with the remark that that was *a part* of the money he had made in a recent transaction. It is thought to have been the largest check ever given here by a private individual.

Both the daughters of Father Meeker, the murdered Agent for the Ute Indians in Colorado, are now lecturing in that State. Josephine addressed a full house at Leadville, Saturday night week, and on the same evening, Rose addressed an audience at Greeley. The recital of the fiendish conduct of the captors of Josephine and her mother is described as blood-curdling.

Mr. George Augustus Sala, the English journalist, arrived last week by the Scythia and stopped at the Brevoort House. He is a portly, bluff looking Briton, with a rapid manner of ejaculating his words, a delightful absence of all ceremonious pretension and a manifestly deep-rooted aversion to being interviewed. He says he is going to Florida and New Orleans for a holiday.

Bad Dreams, Disturbed Sleep, Indigestion, Stomach Gas, all vanish before Hop Bitters.

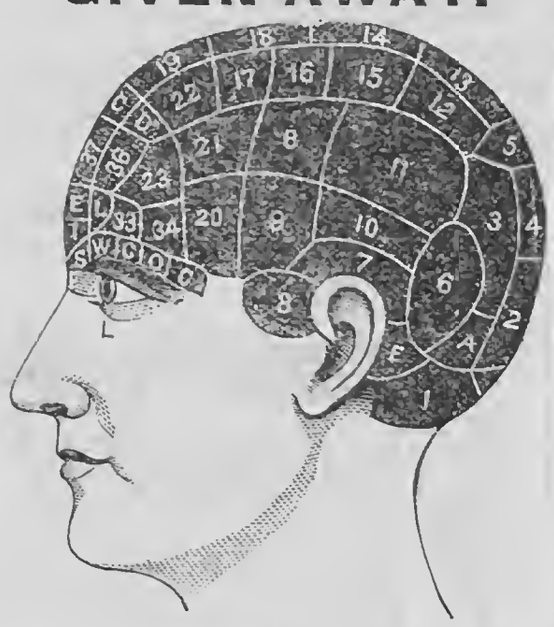
New Publications.

GIVEN AWAY.



THE
Phrenological Journal

Is widely known in America and Europe, having been before the reading world forty years, and occupying a place in literature exclusively its own, viz: the study of **Human Nature** in all its phases, including Phrenology, Physiognomy, Ethnology, Physiology, etc., together with **"The Science of Health,"** and no expense will be spared to make it the best publication for general circulation, tending always to make men better physically, mentally and morally. Parents should read the JOURNAL, that they may better know how to govern and train their children. Young people should read the JOURNAL that they may make the most of themselves. To each subscriber is given the

Phrenological Bust.

This Bust is made of Plaster of Paris, and so lettered as to show the exact location of each of the Phrenological Organs. The head is nearly life-size, and very ornamental, deserving a place on the center-table or mantel, in parlor, office, or study, and until recently has sold for $2.00. This, with the illustrated key which accompanies each Bust, and the articles published in the JOURNAL on "Practical Phrenology," will enable the reader to become a successful student of Human Nature. One of these heads should be in the hands of all who would know

"HOW TO READ CHARACTER"

Terms.—The JOURNAL is now published at **$2.00** a year (having been reduced from $3.00), single numnumbers **20** cents. When the Premiums are sent, **25** cents extra must be received with each subscription to pay postage on the JOURNAL and the expense of boxing and packing the Bust, which will be sent by express, or No. 2, a smaller size, will be sent by mail, post-paid, or we will send the new Book Premium, HOW TO EDUCATE THE FEELINGS AND AFFECTIONS. Send for descriptive Circular.

Send amount in P. O. Orders, Drafts on New York, or in Registered Letters. Postage-stamps received. Agents wanted. Send 10 cents for specimen number, Premium Lists, etc., or send address on postal card for a back number, as sample, which will be sent free.

"THE PRINCE AMONG MAGAZINES."—*N. Y. Observer.*

THE GREATEST LIVING Authors, such as **Prof. Max Muller, Rt. Hon. W. E. Gladstone, Jas. A. Froude, Prof. Huxley, R. A. Proctor, Edw. A. Freeman, Prof. Tyndall, Dr. W. B. Carpenter, Frances Power Cobbe, The Duke of Argyll, Wm. Black, Miss Thackeray, Mrs. Mulock-Craik, Geo. MacDonald, Mrs. Oliphant, Jean Ingelow, Thos. Hardy, Matthew Arnold, Henry Kingsley, W. W. Story, Turgenieff, Ruskin, Tennyson, Browning,** and many others are represented in the pages of

LITTELL'S LIVING AGE.

In 1880, THE LIVING AGE enters upon its *thirty-seventh* year, admittedly unrivaled and continuously successful. During the year it will furnish to its readers the productions of the most eminent authors, **above-named and many others;** embracing the choicest Serial and short Stories by the **Leading Foreign Novelists,** and an amount

Unapproached by any other Periodical

in the world, of the most valuable Literary and Scientific matter of the day, from the pens of the **foremost Essayists, Scientists, Critics, Discoverers and Editors,** representing every department of Knowledge and Progress.

THE LIVING AGE is a *weekly magazine* giving more than

THREE AND A QUARTER THOUSAND

double-column octavo pages of reading matter yearly. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a *satisfactory completeness attempted by no other publication*, the best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical and Political Information, from the entire body of Foreign Periodical Literature.

The importance of THE LIVING AGE to every American reader, as the only satisfactorily fresh and COMPLETE compilation of an indispensable current literature,—*indispensable* because it embraces the productions of

THE ABLEST LIVING WRITERS,
is sufficiently indicated by the following

OPINIONS.

"The last volume of THE LIVING AGE presents a fresh example of the judgment in selection and adaptation to the demands of the best popular literature, which have secured so wide a circulation to that periodical."—*N. Y. Tribune.*

"It covers the whole field of literature, and covers it completely, thoroughly and impartially."—*Times, Cincinnati.*

"It affords the best, the cheapest and most convenient means of keeping abreast with the progress of thought in all its phases."—*North American, Phila.*

"It is, by all odds, the best eclectic published."—*Southern Churchman, Richmond.*

"It is the embodiment of the truest and purest literature of the age."—*Am. Ch'n Review, Cincinnati.*

"*With it alone* a reader may fairly keep up with all that is important in the literature, history, politics and science of the day.—*The Methodist, New York.*

"To read it weekly is a liberal education."—*Zion's Herald, Boston.*

"There is no magazine published that gives so general a knowledge of what is going on in the literary world."—*Presbyterian Weekly, Baltimore.*

"Gives the best of all at the price of one."—*New York Independent.*

"It holds the palm against all rivals."—*Commercial, Louisville.*

"There is no other way of procuring the same amount of excellent litetature for anything like the same price."—*Boston Advertiser.*

"It supplies a better compendium of current discussion, information and investigation, and gives a greater amount and variety of reading-matter, which if is well worth while to read, than any other publication. . . It is simply indispensable."—*Boston Journal.*

"Ought to find a place in every American home."—*New York Times.*

"There is nothing comparable to it in true value in the whole range of periodical literature."—*Mobile Register.*

Published WEEKLY at $8.00 a year, *free of postage.*

☞ **EXTRA OFFER FOR 1880.** ☜

To all new subscribers for 1880 will be sent gratis the numbers of 1879 which contain, besides other interesting matter, the first chapters of "HE WHO WILL NOT WHEN HE MAY," a new story by **MRS. OLIPHANT,** now appearing in THE LIVING AGE from advance sheets.

Club-Prices for the best Home and Foreign Literature.

["Possessed of THE LIVING AGE and one or other of our vivacious American monthlies, a subscriber will find himself *in command of the whole situation.*"—*Phila. Even'g Bulletin.*]

For $10.50 THE LIVING AGE and *either one* of the American $4 Monthlies (or *Harper's Weekly* or *Bazar*) will be sent for a year, *both post-paid;* or, for $9.50 THE LIVING AGE and the *St. Nicholas,* or *Appleton's Journal.*

Merry Christmas **A GREAT OFFER! A BIG BARGAIN!** Happy New Year

9 ELEGANT AND VALUABLE HOLIDAY PRESENTS FOR ONLY 57 CENTS! AN IMMENSELY LIBERAL OFFER BY A WELL KNOWN AND RELIABLE HOUSE! Upon receipt of only 57 cents, (in 3-cent postage stamps), I will send by return mail, post-paid, to any address, my Grand and Unequalled

Holiday Combination Box

containing NINE ELEGANT, VALUABLE AND USEFUL HOLIDAY ARTICLES as follows:

1.—An Elegant, Triple Silver-Plated Butter Knife, Heavily Plated with pure Coin Silver over Nickel, will last a lifetime; new style curved handle, elegantly engraved, most beautiful pattern, and warranted to be alone worth the cost of the whole box. An elegant Triple Silver-Plated and Engraved Napkin Ring will be sent in place of the Butter Knife if desired. 2.—Ladies' Elegant Imitation Coral Set, Breast-Pin and Ear-Drops; new and exquisite pattern, perfect in workmanship and finish, a handsome and stylish set which will last a lifetime. 3.—The New Pocket Photograph Album, a perfect gem of beauty, handsomely bound in imitation leather, lettered in gold, and will hold all the family portraits. 4.—The Little Beauty Autograph Album; an elegant present for a young lady or little girl; neatly bound, and has nearly 100 pages. 5.—Fine Leather Pocket-Book for holding silver and small change; made of handsome grained leather, with steel clasp. 6.—Ladies' or Gents' Elegant Amethyst Sleeve-Buttons, very pretty and stylish; engraved amethyst stones and fine gold-plate settings. 7.—Ladies' or Gents' Fine Linen Pocket-Handkerchief, one of the most useful articles in the world. 8.—Fine, Heavy Silver-Plated Thimble; another very useful article for ladies. 9.—A Complete Pocket Map of the United States, and Calendar for 1880.

The entire nine articles named above, packed in a nice box, will all be sent by mail, post-paid, upon receipt of **Only 57 Cents** in 3-cent postage stamps, or two boxes for $1. The articles amount at retail to $2.25. I make this extraordinary offer because, being a manufacturer and importer of these articles, and wishing to introduce my goods into every family, I am willing to sell them at just about actual cost, relying upon future orders for other goods for my profit. Remember, this Box contains no cheap, trashy goods, but all are warranted first-class and just as represented. It is the most liberal offer ever made by a reliable house—no one can afford to miss it. By buying one of these boxes, you can procure useful and valuable Holiday Presents for the whole family at a cost of only 57 cents. Please tell all your friends of my great offer. *Perfect satisfaction guaranteed or money refunded.* Address F. M. LUPTON, 27 Park Place, New York.

Various.

BRIEFLETS.

Mr. Fowler says it takes a really good farmer to get much benefit from agricultural papers. But how is a farmer to *become* a *good* farmer, Mr. Fowler? Must poor farmers always remain so, and is it only good farmers who have a chance for improvement? . . Mr. Parsons says the berries of Callicarpa purpurea are as large as ordinary birdshot. Does he mean shot for snow-birds or shot for wild ducks? . . Lycenm barbarum (Matrimony Vine) is spoken of, in the Country Gentleman, as a shrub that did no one know how old and well-worn it is, would rank with the best of recent introductions of a similar character. It might have been added that it is the best bait in the world for the potato beetle. . . Down with the canes of Raspberries and Grape-vines that are to be covered. . . Place a light covering of straw over strawberry plants, securing it with evergreen sprays or sticks, or narrow strips of wood. . . The term Morphology, now so often used by botanists, is no chicken. It was introduced into science by Goethe at least as early as 1817. . . The farmer or gardener can now turn his attention to no more profitable work than collecting everything that can be turned into manure for another year. . . We send Premium Lists and Posters to those ONLY who apply for them. . . The Phylloxera (grape louse) is said to be fond of asparagus, and the suggestion is made to plant the vegetable about Grape-vines as a trap. . .

> A pledge be this, though winter's wing
> Obscure our path, another spring
> Shall come, and all things laugh and sing. . .

Now that many of our readers will have occasion to write us in renewing their subscriptions, we would be pleased to have them state what parts of the Rural they like best—what parts least—all for our future guidance. . . M. B. Bateham tells the Ohio Practical Farmer that he has much faith in the Pocklington white grape as a market variety, but he wants something of higher quality for home use. He thinks Lady Washington the finest white grape of the Rickets's collection. If it will resist the attacks of disease, we can hardly ask for a better white grape. . . Mr. Finlay Dun, the London Times's commissioner to investigate agricultural matters in this country, finds among us a degree of prosperity that must attract both capital and labor from England, and he deems our future most encouraging. Well Dun! . . "Nothing," says the Mass. Ploughman, "will fatten poultry so rapidly as corn meal mixed up with milk, especially if scalded and fed warm." . . We ought to talk more of our country as Fodderland. . . The editor of the Germantown Telegraph accepts our proposition as to testing the value of weevil-eaten peas. . . The poorer the paper the bigger the premiums. . . A man in St. Johns, N. B., bought two barrels of potatoes, which were all rotten before he had them a week. They were called Early Rose and Blue Nose, but he changed the names to Goldsmith Maid and Dexter, because they were such fast-rotters.—Wheeling Leader. . . Here is a prognostication for you, coupled with a "*positive*" statement! The New York Sun agricultural editor says that the time *may* come, even in the *near future*, when our Northern States will be able to produce all the sugar required for home use, either from sorghum or sugar beets, but it has *not yet come*, and none know it better than the persons who are trying to get up another sugar mania in order to sell their patent machinery or clarifying compound. The italics are ours. . . It is worthy to note that celery, to be used before February, does not need to be removed from the original trenches in which it is grown. Simply cover it over. . . The Germantown Telegraph says that the innumerable articles which continually appear on "How to make the farm pay," are enough to make a horse sick. . . It is curious to note how a flaming new silk handkerchief will struggle up from the deepest breast-pocket into the light of day and linger there, while the soiled cotton one skulks at the bottom, making only now and then a hasty sally into the open air.—Rochester Express.

There is Health Ahead,

For cheerless dyspeptics who will use Hostetter's Stomach Bitters, which will enable them to digest, restore their appetites, steady their nerves, and drive away the blues. If with such a prospect there are any of them who neglect to profit by the suggestion, why, they deserve to suffer, that is all. Let them ask any one who has used the Bitters if it is not a good medicine, and if they receive a truthful reply it will be an affirmative. Biliousness, bowel troubles, debility, rheumatism are all conquered by this highly esteemed and professionally sanctioned specific, which has also won a national reputation as a remedy for, and means of averting intermittent fevers. It has a cheering effect upon the despondent invalid, and may be relied upon to produce decisive, and not palliative effects. It is the one thing needful for the cure of dyspepsia, and nothing will supply its place.

Industrial Topics.

THE TEA PLANT.

Thousands of our readers who, from childhood, have been accustomed to sip the fragrant extract we call tea, may know nothing of the nature of the plant which produces this article, and, perhaps, they have never seen the leaves in any other form than as the dried, curly material they purchase of their grocers, ready for the tea-pot. To such, the engraving of a branch, flowers and fruit of the Tea plant, which we here present, may be of interest. Botanically, the Tea plant belongs to the family Camilliaceæ, and the whole plant greatly resembles the much-admired Camellia, so common in greenhouses. Like this, the leaves of the Tea plant are alternate, evergreen, of a shining dark-green, and somewhat leathery, when full-grown. The flower, seen at *a*, is white, with a tint of amber, fragrant and much smaller than the flower of the Camellia; the petals are thick and the stamens numerous. At *b* is seen the ripe fruit, and at *s*, a single seed. Mr. S. Ott, of Aiken, South Carolina, who sent us the original from which this engraving was made, states that the plants flower and mature seed freely in that latitude.

Though Tea has been cultivated in China for upwards of 1,200 years, it is said to be found in its really wild state only in Upper Assam, and that plants found growing wild in China are fugitives from cultivation; but this whole question of fugitive vegetation is one on which many different opinions are held by eminent botanists. The Assam Tea plant —Thea Assamica—differs, however, from the Chinese—Thea viridis—in several particulars:—It grows quicker, does not bear seed so readily, and the leaves often measure nine inches in length, when full-grown; the Chinese plant is also much hardier.

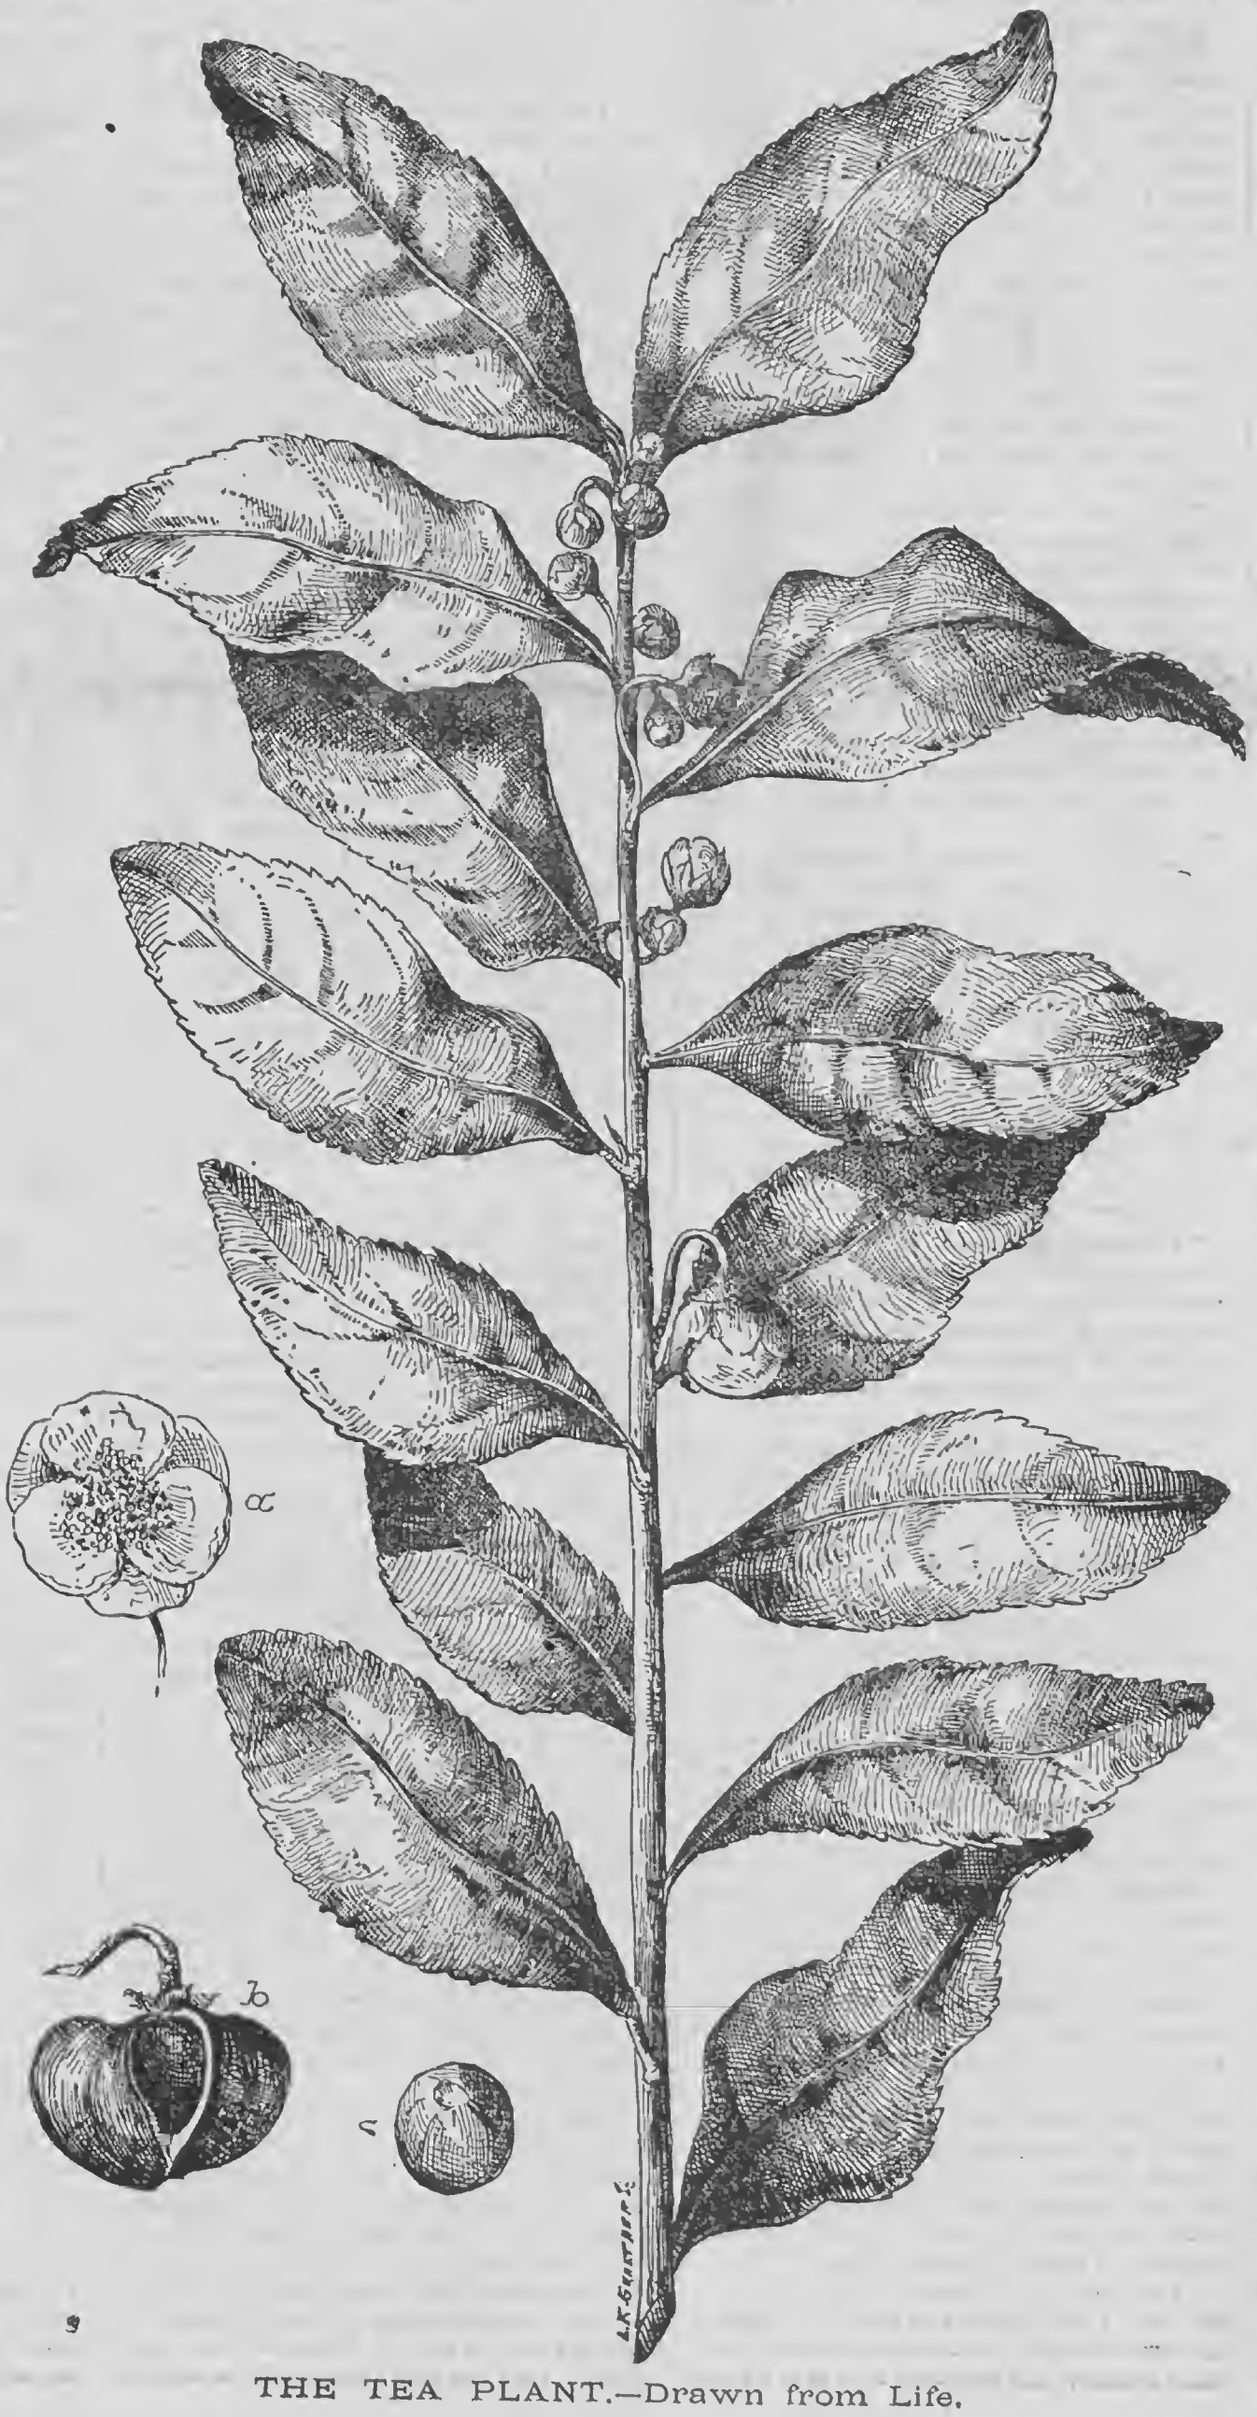
The Tea plant was brought to this country about 60 years ago. In 1858 the United States Government imported 10,000 plants from China, with a view to try them in this climate, and this number being soon trebled by propagation, they were distributed in many parts of the Southern States. From the outbreak of the late war, and during the whole period of this domestic trouble, but little attention was paid to tea culture; but after the war had closed, the interest was again revived, and the Department of Agriculture has since distributed a large number of plants each year.

These numerous trials have established the fact that the plant can be grown in this country, though, perhaps, not so rapidly as in Asia. It will withstand a light frost unharmed, and the temperature has even fallen to zero without causing it any material injury; but it succeeds best in a hot, damp climate, with copious rainfalls during the spring and early summer.

Only the young and tender leaves can be used for tea; if full-grown, they are much too hard and coarse to pay for the manipulation. The leaves shown in the engraving are too old to be used. In India, where the best tea is now made, there are five distinct stages in the manufacture. These are as follows:—1st, withering of the leaf; 2d, rolling; 3d, fermenting; 4th, sunning; and, 5th, firing. To obtain the best results it requires a skill in the details of each operation, which can only be attained by experience.

The rolling is done to extract a portion of the juice and also to give the leaves a twist. They are then left in compact balls, in which condition fermentation soon sets in. Having fermented enough, the balls are broken open and dried in the sun; and, finally, the drying process is completed by heating in a furnace. This is for black tea. The manufacture of green tea is somewhat different. In this case, the leaves are not withered and fermented, but repeatedly heated in pans, rolled and sun-dried. The difference between green and black tea lies wholly in the manufacture, not in the plants.

No conclusions can yet be drawn as to the practicability of manufacturing tea at home. Labor is too high in this country to admit of the mode of manufacture now practised in China and other Asiatic countries. Much of the work which is there deemed necessary is done, however, with reference to an ocean voyage for the product, and could be dispensed with for home use. Much work is also expended for the purpose of meeting existing commercial ideas of the appearance of the tea, without bettering the quality of it, and if such prejudices were overcome, the cost of production would be materially reduced. No process of manufacture is yet known by which we, in this country, can produce an article at a paying rate that can at all compete with foreign teas in the market. But we see no reason why these obstacles should not be overcome. The adoption of an industry so exclusively foreign must necessarily be gradual, and the failures which the attempts of a few unskilled amateurs have resulted in, do not prove that success will never be reached. Much harm has been done to the enterprise by a class of journals which are too ready to denounce new ideas and their promulgators. The home production of our tea is a proposition so pregnant with interest as to justify the most complete and thorough experiments, and to discourage such experiments tends to blight the development of the industry. When by thorough trials it shall have been found to be a failure, then it is time to denounce the idea of producing tea at home. Mr. S. Ott gives the Rural his experience in tea culture as follows:—



THE TEA PLANT.—Drawn from Life.

"I have some twenty-odd plants that grow finely and yield good tea, and are fine, flourishing, ornamental, evergreen shrubs. The largest bush is four feet nine inches high, and quite strong and bushy. That the tea plant will flourish in this climate is easily proved by examining these fine plants, which do so well with no special care, or enrichment of soil. I find no trouble in raising them from seed or plants, *if one* particular point is attended to; and that is, that while young, and for the first two or three years, they be shaded so that the heat of the sun will *not reach the roots*, as this kills them. They can be shaded by anything that keeps the roots cool. I lost quite a large number of plants until I learned that point. Then I mulched my plants with 'pine straw'—leaves of the pine tree—some six or eight inches deep, and this protected them perfectly. The leaves of the plant are not affected by the heat of the sun, or by freezing in the winter in this climate, where the thermometer marks down to 18°, and even 15° sometimes, though very seldom.

"The blossoms of last year are now just ripening into tea-nuts or seed. My plants first blossomed in October and November of 1877, and the buds, after blooming in December, were frozen during some severe cold weather, and I thought, of course, that ends them;' but the following fall —November, 1878—I found all were safe, and I gathered several quarts of fine tea-nuts. So now the fruit of last year's blooms—like the specimen sent—is just ripening and the nuts falling, and at the same time the bushes are covered with blooms, which, I believe, is a rare thing in plants.

"We have used the tea made from the young leaves in the spring, and our friends unite in its praise for its fine, fresh flavor and extra quality of the Oolong variety. In the green or growing state, there is no flavor to the leaf; but killing the leaf with steam—cooking the juices in the leaf—and then drying in a slow oven, bring out the tea flavor. Of course, we do not manipulate it so as to make it look like the imported Chinese

article; but the flavor is all right and the aroma perfect.

"The plants require deep tillage and rich, moist ground, and from seed-planting until the plants are large enough to begin to yield a crop, will take four or five years. Then, with proper care and treatment, I can see no reason why they would not last for many years. To pick off the young leaves is about the same as picking berries, only the former are lighter in weight; but then comes the steaming, manipulation and care in preparation, which produce a fine article, of pleasant, rich flavor, which, no doubt, would bring at least double the price of any of the imported tea, for its purity and freshness.

"It will make its way slowly, but, I think, surely, as one of the staple articles of culture in this part of the South, and the time will come when its cultivation will be one of the important industries of this section."

Farm Topics.

HISTORY OF A POOR FARM.—No. 21.

Employment of Capital in Farming.

My old neighbor never tires of grumbling about the recklessness of modern farming, and is especially severe upon Dr. Jones and myself for turning William's head, as he says. William has recently purchased 200 loads of manure from a neighbor at a dollar a load and borrowed the money from the bank on his note, to pay for it. The old gentleman thinks the man who sold the manure has far the best of the bargain. William is a model grandson. He humors the old gentleman's ideas in a very respectful manner, and in this instance has agreed to give one-third of the increase of the crop to his grandfather for the use of 10 acres, upon which he intends to put the 200 loads of manure.

"But he is paying out $200 for 10 acres," said the old gentleman complainingly, to Mr. Martin.

"Well, what of it?" replied Mr. Martin. "Suppose he is: he will put 20 loads of the best kind of manure on the land, and he will put sweet corn in it. That manure is a year old. The man he bought it from keeps a mill, and feeds the mill waste, bran and sweepings to his cows and pigs, and has only eight acres of land which is as rich as a garden, so that he does not want it himself. The manure is of the richest kind, and is worth twice what William gave for it, I should say. How is it, Fred, what ought that manure to be worth in cash?"

"The manure is well rotted and fine, and in the best condition: it has been gathered since last winter, and has been trodden and turned over by more than 20 hogs since then. I never saw better manure than that my father is now hauling home. Perhaps there never was any like it analyzed; so that it will be fair to take Dr. Voelcker's estimate for its value: one ton would contain 11½ pounds of nitrogen worth 25 cents a pound, or $2.87½; 10 pounds of potash worth 60 cents, and six pounds of phosphoric acid worth 60 cents; in all, $4.07½ per ton. Father will draw two tons of this in a load in his rack market wagon, which is the way he bought it, so that each load will be worth over $8.

"I was once asked $15 for such a load of manure, which was hauled from a Philadelphia horse-car stable, when living in that neighborhood a few years ago," I remarked, "and the owner was not at all anxious to sell it even at that price."

"Manure is worth less or more, according to the use you put it to," remarked Dr. Jones. "If you use it to grow market truck which sells for $400 or $500, or even more an acre, it is worth much more to you than if you top-dressed a pasture with it and grazed cows for milk at two cents a quart. Money must be judiciously spent for fertilizers, or it may be very easily thrown away; but if we could buy good manure for 50 cents a ton, or even four times that price, it will pay. A neighbor of mine put $80 worth of manure on 1½ acre of early potatoes, and sold 150 barrels at $3 a barrel. He had at least half the value of the manure returned a second time in a crop of late cabbage. It is the use made of it, in which its value lies."

"Precisely," remarked Mr. Martin, "and William will make $100 an acre from his sweet corn, if he has but a moderate crop and only moderate prices, and a lot of fodder for his cows, and he can get a second crop from the field, besides. Don't you think he can do that?" asked Mr. Martin of the old gentleman.

"He ought to do that," he replied, "and I know if he had not the manure the field would have no crop worth speaking of, for the clover has run out. But to borrow the money first is too risky."

"The old gentleman has some 4-per-cent. bonds salted away, and thinks it a very safe investment; but the $20 an acre spent by his grandson will pay more than 100 per cent. interest, and perhaps twice and three times as much; and yet he cannot see it," I remarked, aside to Dr. Jones.

"That is the usual way with farmers," replied the Doctor, "few of them can be made to see that the safest and most profitable investment is the improvement of their own farms; and that the employment of capital is the only way to make their farms pay. But capital can only be profitably employed by those who have business skill to use it. Solomon said that 'wisdom is a defence and money is a defence, but the excellency of knowledge is that wisdom giveth life (let us say profit, instead) to those who have it.' He also said 'money answereth all things,' and if there is one place in which it answers a better purpose than in another, it is on the farm. The History of this Poor Farm is altogether one of the wise uses of capital, for I think capital has been used wisely here. There is no show, or fuss; and our old friend even, I think, cannot point to anything in which the money spent has not been used judiciously and economically."

"Dr. Jones is pleased to be complimentary, more so than I deserve, and I can point out myself some things which I am not satisfied with."

"Let us have them," said Mr. Martin, "an honest confession is a good thing."

"Well, I don't agree with Solomon altogether, because money won't answer in place of brains. Money may be thrown away very easily, if one does not watch its expenditure very closely. The fact is, I have not been liberal enough in my expenditures; in some instances, I have quite failed to get my money back again. In others, I have employed labor without watching the men closely enough, and the work done has been lost in great part. I can point you to one item alone:—the woods' pasture was all cleared and the brush piled, but as I was not with the men to direct them, the brush was heaped right under the best of the shady Beeches, so that to have burned it there would have destroyed them. When this work should have been done and the ground cleared for sowing to grass, the beets needed weeding and cultivating, and the man had to be taken for that; the woods' pasture grew up with brush once more and the work has to be all done over again; that is a loss of from $50 to $60.

"That was your mistake and none of Solomon's," remarked Dr. Jones. "If you had been wise enough to have employed a second man and spent six dollars for a week's labor, the work would have been finished, the pasture would have been ready for use in the fall and the loss prevented. The proverb is true; your wisdom and the money would have been a defense against loss and injury, but you see you failed to employ either."

"Well, go on with your confession," said Mr. Martin.

"Last year," I continued, "I used 600 pounds per acre of artificial fertilizers on whatever crops I put them on, corn, beets, rye and potatoes; and it paid me to do it. This year I used 300 pounds per acre, and it did not pay."

"Just so," remarked Mr. Martin. "I think I said as much at the time. It is as though you fed your horse well last year, and he was fat, worked well, and was healthy. This year you put him on half rations, and he has been poor, hide-bound, weak, and sick, half the time. So you half-starved the land and you find it doesn't pay."

"I took our old friend's advice, you see; he thought I was extravagant and wasteful, and did not believe in using artificial manures so recklessly, as he thought; and I was desirous of trying it. Consequently, I have, as usual, paid for my experience, and we all have the benefit of it."

"The season has been a bad one, very dry and hot, and you plowed the corn too deep; that spoiled the crop," replied my old neighbor.

"That is true," replied Dr. Jones. "You will always find that it is the crop that is not well fertilized that fails in critical seasons. Make the soil rich, and your crop strikes its roots deep and can resist unfavorable weather. A poor crop goes down at once; a strong, healthy one stands up in spite of dry weather. It is the same universally. The weak and poorly-nourished people are the first to succumb to disease of any kind. A robust child goes through the measles and all the infantile complaints without being sick, and is playing about while the weak one needs the most careful treatment or even dies speedily, in spite of it. So that, after all, it was the fault of the half-fertilizing, and not the season, that spoiled the corn. My corn did not suffer, as you saw for yourself, nor did Mr. Martin's."

"The credit for that belongs, not to me, but to Mary and Fred," said Mr. Martin "he advised her to have all the manure in the yard put on that field, and she would have it and gave me no peace until it was done, and we had a fine crop of corn, in spite of the dry weather. I think Dr. Jones is right."

"I am sure of it" I replied, "and as the bad boy said 'I will never do so again.' Capital is the life blood of agriculture, just as it is of any other industry, and the more of it that we can use to good advantage, the more profitable will be the business of agriculture. William is on the right track, and his small beginning will prove it to him and I think to his grandfather, too. Suppose a man who had a factory should put half his money in government bonds or a mortgage, and, instead of buying coal to keep all his machinery going, buy only half enough; and half enough cotton and wool to work up into cloth; or suppose a store-keeper should loan out his money to his competitor across the street, and keep half his shelves empty and turn away half his customers; we should say they were poor business-men. But we see farmers do the same thing year after year, or if they have not money to lend, they are afraid to borrow a few hundred dollars to expend in stock or manure, to make their land rich and productive; and yet they will buy a piece of land which they cannot use, and give a mortgage on it for half the cost of it. A farm is a factory; and nine out of ten farms are half-worked or less, and their owners not only lose interest and pay taxes on their idle land, but they fail to make the profit which they might do by making use of it. The owner of 100 acres of land cannot afford to be his own laborer. He should be an employer of labor. Four men could very well be employed on 100 acres of land rightly cultivated. The owner must have money and skill—'wisdom and money'—to employ and direct the laborers who have not the skill to direct themselves, and for every dollar paid to them for wages, the farm ought to produce five. English agriculture has been carried on in this manner for years and has supported laborers, tenant farmers and land-owners."

"That has come to an end now," said the old gentleman.

"No," I replied, "I don't believe that. Don't let us make a grand mistake and build up false hopes upon it, or we may come to grief. English agriculture is suffering from a succession of bad seasons, which have caused the farmers heavy losses in some cases; but, nevertheless, the laborers have been paid and the owners have had their rents. It has been there as it is here:—there are farmers who have not lost money, although they have had five or six bad crops successively, and there are those who have had their farms in good order and well cultivated; the poor farmers only have fared the worst. A system of agriculture which can keep alive under such unfavorable circumstances, will revive with the first favorable season. Their system is one in which as much capital as possible is used; every possible improvement by which stock can be kept and fed, and manure made, is adopted; the average working capital of the English farmer is $40 to $50 an acre, and the owner's capital, in land and buildings, is $500 per acre. The former returns, in an average season, 12 per cent., after paying all the expenses of the farm and the farmer's family; and the latter yields 3 per cent. Fancy an American farmer using $5,000 on 100 acres, in the purchase of stock, tools and fertilizers, and in paying wages! What a difference we might see in the yields of our crops and the condition of society, when four men were employed on every 100 acres! What a volume of business would be set on foot! What a home market we should have, and what a hive of industry would be exhibited!"

"And to return to our starting point," said Mr. Martin, "the basis of the whole is the use of manure, of which we must make what we can, and buy what we cannot make."

"What would you say to this?" asked Fred. "I cut this out of an agricultural paper, the other day, and it is the opinion of a farmer, who writes: 'We tillers of the soil can't work just for manure; we must realize money, or 'up we go.'"

"Well, what would you say about it yourself? You know, Fred, what we are working for here is manure, and we think manure is money; or, at least, the only money we get is through its use," I rejoined.

"Certainly," replied Fred. "I think this farmer does not see clearly. If a man wants to make money out of his land, the first thing he needs is manure. If he has money to spend on his land, manure is what he looks for first; as he cannot buy it very often, he must make it, and the only way to begin to do this is to get stock—cows, sheep, beeves, or what-not—and buy feed, and manage so that he gets the money back from them, and has the manure for his profit: then, if he uses the manure, well, he turns that into money, and I do not know any way in which money can be made from a farm, unless the farmer works 'just for manure.' If he doesn't do this, 'up he goes,' and no mistake."

"That is what Fred has been saying to me for months," remarked his father. "It was he who advised me to buy the miller's manure pile, and I think it will be a good investment. I have borrowed the $200 for nine months, at 6 per cent. interest; the interest will be $9. If I cannot make $209 extra out of the 10-acre field next year, from those 200 loads of manure, I know I can get half of it, and half the next season; but I feel sure I can double it the first year. I have done as well as that from manure made on the farm, but with our stock we cannot make enough: and I cannot see but that it will pay me to buy manure at one dollar a load, as for you to feed cows and buy cotton-seed meal and bran to make it."

THE TRUTH ABOUT IT.

[The object of articles under this heading is not so much to deal with "humbugs" as with the many unconscious errors that creep into the methods of daily country routine life.—Eds.]

IT IS NOT SOUR LAND BUT POOR LAND WHICH PRODUCES SORREL.

COL. F. D. CURTIS.

Men of science sometimes tell us queer things, and one is that sorrel is an effort of nature to get rid of the acid in the soil, and as a remedy for the acid condition of the soil, and to get rid of the sorrel they recommend the free use of lime to sweeten the ground, thus by removing the cause, to cure the evil.

The truth is, sorrel delights in light and dry land. The sandy plains in this county are just suited to it; when the land gets so run out that nothing else will grow, the sorrel will cover the ground. The seeds are in the ground, ready, as soon as a seeding of grass seed fails or any crop, to spring up and clothe the otherwise barren fields with their useless burden. When the soil has heart enough to produce other crops, the sorrel is kept in the background growing feebly, or not at all, waiting for its turn, which it is not slow to improve, either in patches or all over a field just as the case may be. There are no earlier, or warmer, or *sweeter* lands in Saratoga county than those where sorrel is most at home and most abundant. Vegetable substance in the shape of soil, is what they lack, and when this is supplied in the form of barn-yard manure, grain or grass can be produced and sorrel disappears. Run a lot out, however good it may be, and the sorrel comes in. It seems to be latent in the soil ready to grow when its time comes, and its time will come on the best of sandy, or even loamy lands, if they are allowed to run down.

Now, let us look at the lime theory in the light of these facts. The office of lime mixed with soil is to dissolve vegetable matter and thereby stimulate growth, or to increase the decomposition of organic matter, and thereby add to the fertility of the land to which it is applied. It is a question whether the land has, of itself, any direct manurial property, and if it has, it is very small; at least its effects are very limited as positive plant-food. How much land would a load of lime sweeten? On our sandy fields the sorrel would grow just as freely by a heap of it as anywhere else. If this theory of changing the state of the soil from sour to sweet, is correct, a sour-apple tree could be made to produce sweet fruit by a plentiful use of lime; for, according to this sort of science, it must be an acid condition of the soil, which causes sour apples to be produced. Trees and plants bear fruit after their kind, or they do not bear at all, and exhausted lands, or *empty* lands, bear sorrel, because it is a plant of a low or weak order, nearly as low as lichen, and comes in where others will not.

Sheep Husbandry.

COUPLING SHEEP.

FORREST K. MORELAND.

It is during this month that the farmers in this section attend to the important duty of coupling sheep. All sheep-owners do not attend to this matter at precisely the same time. One farmer may be a breeder of thoroughbred sheep of some popular variety, and, wishing to raise early lambs for the local shows, must necessarily turn the ram with the ewes at a much earlier season than if this were not his object. A sheep-breeder who has this for his object will, if he has suitable accommodations for young lambs, try and have his lambs come in January, or perhaps in February. This is always considerable trouble, and nothing but a strong desire to excel will ever induce a farmer to have lambs come in midwinter. A farmer going largely into sheep, and wishing to grow early lambs for the high prices which good early lambs always command, will also have his lambs come as early as he can attend to them. But, aside from these two objects, viz., growing early lambs for show purposes and for early sale to the butchers, it is not considered profitable to have the lambs come when there is any danger of loss from the inclemency of the weather. The loss from this source too often overbalances any profit that might arise from having early lambs to sell. The greatest profit from sheep-breeding in this section is found to result from saving as much labor as possible, and also avoiding, if possible, all chances of loss. The first of May is a

time when lambs are reasonably safe; the weather is mild, and if the lambs are attended to as soon as possible after they are dropped, they will soon gain sufficient strength to be out of danger.

We will presume that the buck has been kept from the sheep for some time; for if this is not the case, the lambs will be coming quite early and at all times. It is better that he should not only be kept separated from the sheep, but also be fed for the season. It is a good plan to commence feeding a small allowance of corn or oats about six or eight weeks before the season and increasing this amount to a quite liberal allowance, which should be continued throughout the season. The buck should in no case be deprived of sufficient exercise, for if such were the case, and the stimulating food continued, he might commence the season with his vigor very much impaired. If it is found inconvenient or undesirable to keep him away from the rest of the flock, he may be fettered; that is, a fore and hind foot should be tied together in such a manner as to interfere with his freedom of action. Another method which I have found satisfactory—except that it does not prevent the buck chasing the ewes—is to tie an apron under his belly by cords passing between his fore legs and over his neck in front and over his back behind. In this case the ram is perfectly safe, except for his disposition to worry the ewes. I have found no plan that would give as much satisfaction as separating the buck from the ewes. He can be fed properly and the ewes are safe from any danger of being injured, or getting with lamb before it is desirable that they should.

The buck may be turned with the flock altogether, or he may be allowed to go with them for a few hours at a time each day. Where there is a large number of ewes to be served, I consider the latter the better plan. Where this plan is adopted, the buck, after serving the ewes that may be in season, is removed, and is more apt to keep quiet, will go through the season to much better advantage and will get much better and stronger lambs than if allowed to run with the flock all the time. If it is not convenient to attend to serving the ewes, then it will be found a very good plan to mark the buck with fresh paint between the fore legs before turning him with the ewes. By adopting this device, it becomes an easy matter to keep a record of the date of the service of each individual ewe; or, if this is not desirable, then it serves to satisfy the farmer that all of the flock are served, if such should be the case, or, if otherwise, to distinguish those ewes that have not been served. This is sometimes very essential to know, as the farmer might wish to turn off, during the winter, those ewes that are not with lamb. Three or four weeks at the farthest is a sufficient time to allow the buck to remain with the ewes, after which he should be removed. An old buck is too apt to injure the ewes during the winter, if allowed to run with the flock, and on no account should an old buck be allowed to run at large. If the buck has been used for the last time, then he should be disposed of as soon as possible. If he is a young one and it is desirable to use him during another season, even then it is a good plan to keep him in a separate inclosure. The breeding ewes should be well cared for during winter, as it is desirable to raise as many lambs as possible from the number of ewes kept. The greatest mistake, I think, that I ever made in keeping sheep was to feed my breeding ewes too high. I had a flock of 20 large long-wool ewes, and I fed them pretty liberally all winter on grain. I kept my ewes fat and feeling well, but I did not have very much success with lambs.

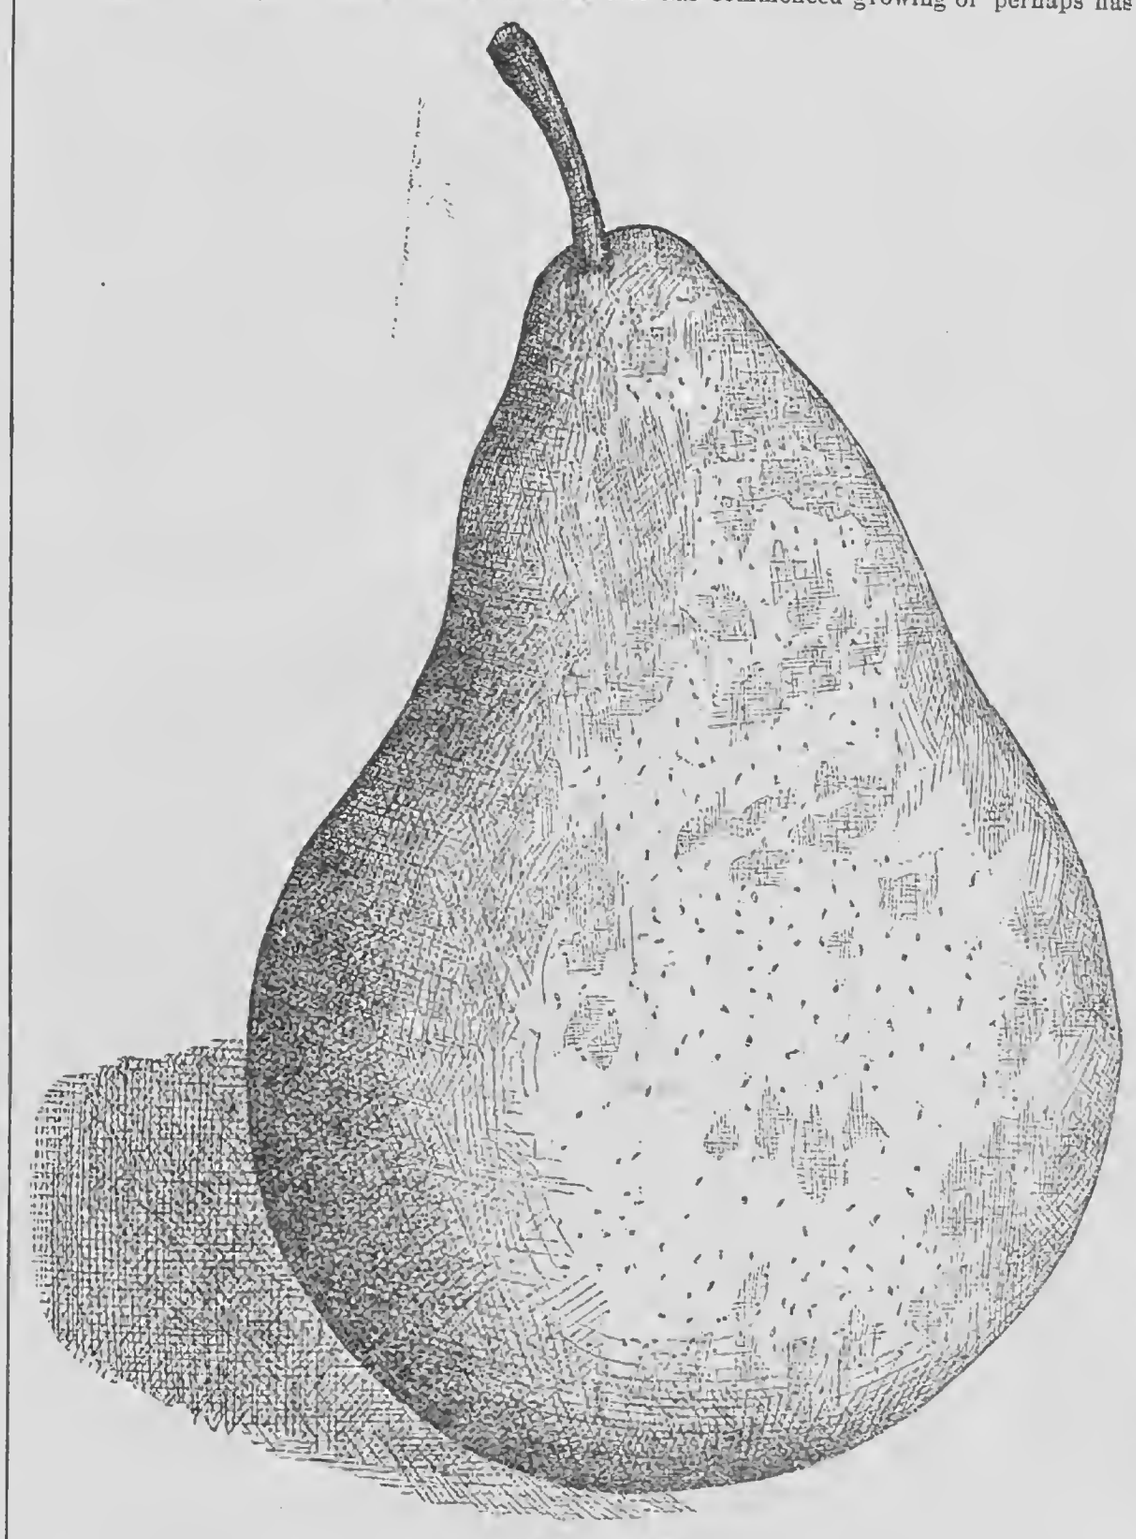
Sheep should be kept in some place where they can always be well bedded with good, clean straw. They should not be crowded, and they do not require as warm a stable as cows; and yet the side of a straw-stack is not sufficient for their comfort. Sheep should be fed in the stable. Where they can have constant access to good, sweet hay, I have used a very serviceable rack for this purpose, holding a small quantity of hay, with no danger of the sheep getting it under their feet. But a small quantity of hay should be fed at a time, as they eat it much better if it is always fresh. At the base of the rack there is a broad and shallow trough to catch any seeds that might fall to the ground and be wasted. This trough also serves for salt and roots, or grain, and by being placed in the position I have described, it prevents the sheep rubbing against the feed rack and getting their wool filled with dirt. I do not advocate high feeding of breeding ewes, but I do think that a small allowance of roots daily will be found beneficial. They should be allowed the run of a good yard during a large portion of the day, but should not be allowed to run with other stock. With judicious care, there is but little danger of sickness in the flock; and by treating my flock in the manner I have described, I have had uniformly good success with my lambs, usually raising, on an average, three lambs to every two ewes, and sometimes even more. Indeed, I now recall one season when I kept 10 breeding ewes and raised 21 lambs. When sheep are kept in such a manner that the possibilities of the stock being profitable are realized, no farmer will abandon sheep-breeding for any other stock. There is a fascination about this occupation which few farmers can resist. Pay-day comes twice a year—from lambs and wool—instead of once a year, or once in two or three years.

St. Lawrence Co., N. Y.

Pomological.

BEURRE BOSC.

In this market Beurré Bosc meets with a ready sale during mid-autumn. Our sketch is that of a pear purchased at one of the thousands of "Apple" stands, one or more of which will



BEURRE BOSC PEAR.

be found upon nearly every corner of prominent thoroughfares. The price for the size represented was ten cents each. The skin is quite smooth, of a deep-yellow color russeted in patches. The flesh is juicy, rich, very buttery, perfumed, sweet and fine. This is one of the many sorts that fail on quince stocks. The growth is moderate on pear stock, but regular. Its origin is Belgium, and it has been found to succeed well in New York and Massachusetts and fairly in most of the Middle States, as also in Georgia, Missouri, Kentucky, Tennessee and Virginia.

PROTECTION OF ORCHARDS AGAINST MICE IN WINTER.

Growing an orchard does not consist entirely in setting out trees and cultivating them; they demand constant care. "Eternal vigilance" is the price of an orchard. They must be cared for from the time they are set out as long as they exist; from early spring until late in the autumn, and, indeed, there is no time, even in midwinter, when it is safe to allow the orchard to take care of itself. That is something an orchard cannot do in this section and climate.

For instance, some of my neighbors lost a great many young trees last season by having them girdled by mice. One of them who had lost a large proportion of his young orchard in this manner, in speaking of his mishap, made the remark that the cause of the injury was so very simple that if he had only thought of it, he could have prevented all danger of loss from such a cause. When once he had met with the loss, he knew of any number of good preventives. But it was locking the stable after the steed had been stolen. A tree once girdled, is useless. True, it can be saved, but I prefer cutting it down at once. Having done this, you know straightway the extent of the loss, and there is no valuable time wasted in the perhaps *fruitless* nursing of an invalid tree. Let it be once understood that if a young tree has been badly girdled, it means a total loss of the tree, and it then becomes much easier to impress on the minds of tree growers the importance of carefully guarding against this evil. It is not the trees of a single year's growth alone that are in danger. Trees of five, six and ten years' growth, are just as liable to be attacked, and to have the tender inner bark destroyed in midwinter, as the youngest trees in the nursery.

A young tree just taken from the nursery, is not worth more than 25c. or 35c., for you can procure all you wish for this price; but after you have purchased the tree and set it out, it becomes much more valuable. After a tree has commenced growing or perhaps has attained several years' growth and commenced bearing, it is of course worth still more. A tree that has reached the size and age which warrant a reasonable expectation that it will bear with moderate regularity, is worth shillings where a nursery tree is worth cents. Another thing:—when once an orchard has been set out, the trees are all of one size, and while they remain so, the orchard presents a much more pleasing appearance than if some trees are smaller or larger than the remainder. If a few trees are lost annually by being girdled by mice, they must be replaced, and the beauty of the orchard is at once injured. I have known orchards abandoned for the simple reason that by losing a few trees annually for several years, they came in time to present such a ragged and irregular appearance, that their owners lost all hopes of ever making anything from the money invested. This could all have been prevented. It is not the proper way to set trees in the place of those destroyed, but rather not to allow any to be destroyed. If perchance a few should be lost, then, of course, they should be replaced. But the farmer is not entirely blameless who is not satisfied the loss could not have been prevented. From the length and severity of our winters, nurserymen and fruit growers in this section are peculiarly liable to losses of this character. In nurseries a shallow trench between the rows of young trees is a pretty sure remedy, especially if the trunks of the young trees stand in the highest places between the trenches. I have used the same remedy in a modified form in a young orchard of 200 trees, with perfect success.

I believe that trees will not grow unless they have sufficient plant-food. No farmer feels disposed to set out a young orchard and give the young trees sole possession of the soil for the several years that must elapse ere they commence bearing, and yet it is just this that the trees require. Inasmuch as the soil is being constantly cropped, it becomes necessary that the trees should be manured. Now, I practice manuring my young orchard in the fall. Before it freezes quite hard, I scrape my barnyard and haul to my orchard the manure I succeed in gathering, and put three or four good shovelsful to every tree; I do this in such a manner as to make a sharp cone at the root of the tree. Since I commenced doing this I have not lost a tree from mice. The reason is simple:—mice when traveling under the snow, always turn aside at the least obstruction; they cannot burrow in the ground and thus reach the tree, and the banking around the latter is a certain protection. In spring, the manure should be carefully spread away from the tree, and whether the orchard is cultivated or kept in sod, the manuring of the young trees in this manner will generally be found sufficient.

Another method which answers very well, but one that is quite troublesome, inasmuch as it requires constant attention during winter and especially after every snow storm, is that of keeping the snow well tramped around the trees. In a large orchard and during a severe winter, this would be found a rather irksome task, and yet, if I had neglected all other precautions, I should not hesitate to adopt this method of protecting trees from mice. I have tried it and found it satisfactory, but not a pleasant job. Mice will not work at a tree unless they can work under the snow. By tramping the snow around the tree, the snow tramped becomes too compact for the mice to penetrate it easily, and as they will not attack the tree above the snow, the result is that it escapes.

Another very successful protection against mice, adopted by a friend who is a successful fruit grower, consists of taking sections of worn-out and damaged stove-pipe, and, after opening a section at the seam, clasping it around the tree and settling it in the ground. When this has been once properly done, it will last for several years and is perhaps the safest protection that can be adopted. Pieces of old tin can be used in the same manner, but usually damaged stove-pipe can be procured and if used in this way, it will be found much better than throwing it away. It is a perfect protection, for the reason that mice never attack trees while they can procure other food, and when they cannot, the ground is frozen so that they cannot burrow under the pipe and they never attempt to go over it.

I have only attempted to describe a few of the many remedies for this serious evil. And when we consider how important are the fruit-growing interests, we cannot but conclude that it is a poor remedy for any threatened danger, and especially the danger of having trees destroyed by mice, that is wholly unfit to be tried. Those who have small orchards and have occasionally lost a few trees and have not taken the trouble to try any preventive, should test something that promises success, and not run the risk of losing their entire orchards, as they do every severe winter. One prolific cause of mice working in an orchard is cropping the orchard with corn or grain crops. If root crops are grown, the danger is considerably lessened. However, by resorting to any one of the methods of protection which I have described, or any other which may suggest itself, any crop may be grown in the orchard with impunity.

St. Lawrence Co., N. Y. F, K. M.

A VISIT TO A MAMMOTH PEAR ORCHARD.

MRS. ANNIE L. JACK.

"Where are we going?" I asked, one bright morning in early November when I was called to take my place in the carriage for a drive. The answer was given in the cordial tones of my friend. "Why, to Marshall P. Wilder's. You said yesterday you would like to see his pear orchard."

I felt, while in Boston, very much as if in my case there was something real in the story we often read of a good fairy who is ready to grant us our wishes if we just say the word—and never more so than during that charming drive. At last, when we had passed through miles of a delightful country road, we came to what would be in summer time a shaded lane of great beauty. Our driver stopped—"This is Mr. Wilder's place," and we stepped out to find ourselves before a large house that, without great pretensions, seemed to speak of comfort and elegance. The veteran horticulturist was in his library and though recovered from his recent indisposition, was not able to go about as usual—except to drive. His son, with an obliging air that I could not help admiring, knowing how much he must be tried by visitors, volunteered to show us the grounds.

We went to the pear-house first, where in every stage of ripening were giant specimens of every variety one could mention. We held our breath when he told us, with a very nonchalant air, that they had now *only* 800 varieties. Every va-

various "Beurré" was represented there, and in the cellar were the later sorts, to be kept back as long as possible, until the market was relieved of its present rather full supply. The trees are set out in avenues across the lot, and between them are planted Raspberries, that, at the time of our visit, were carefully laid down and apparently covered with earth. The trees were tall, straight and slender of stems, with full branching tops, and seemed in a very healthy condition. Their chief enemy is the canker-worm which I notice is more dreaded in Boston than as yet in our northern locality. The grounds of Mr. Wilder gave evidence of careful attention and intelligent work, and I considered it a great favor to walk through a pear orchard that is famed throughout the horticultural world. In the greenhouse was a giant Maréchal Niel Rose that caused me to break the tenth commandment. I *did* covet it, or one like it; for it takes so long to grow those thick old stems and yards of vine. Our guide was generous as well as patient and with a free hand broke off cuttings of a plant or two I ventured to admire, and which, now transplanted to my home, bid fair to grow. We were also presented with some very fine pears, that came to "Every-day House" in good condition and were a treat to my horticultural-minded "gudeman." And in looking back at the many and rich enjoyments of my visit to Boston, I find none more satisfactory than that morning drive to the orchard of M. P. Wilder.

P. S. Please, horticultural readers, don't all go at once to see for yourselves, or young Mr. W. will not thank *me* for this little article; unless, as I was, you are so fortunate as to have a friend who is a member of the Massachusetts Horticultural Society, in which case, that fact will (so my experience goes) at once be the "open sesame" to his favor. A. L. J.

SALT FOR PEAR BLIGHT.

Having noticed in a late Rural a communication from Gen. W. H. Noble, on the above subject, I herein give the results of my single season's experience:

I purchased a ton of refuse salt, and applied it, mixed with plaster at the rate of 100 pounds of each to the acre, on clover and oats, and having some left, I put it, mixed with coal ashes, around some very thrifty pear trees. I had a row of 25 alternate standards and dwarfs of different varieties on which I had devoted a good deal of labor, and they were just commencing to bear a few specimens. Now, as to the effect of salt:—On the clover and also the oats no perceptible effect could possibly be seen more than a top-dressing of plaster would have produced, but my pear trees are killed, or nearly so, by something as nearly like blight as anything I ever saw. Every one says it is blight. I think the salt did the evil, for mine are the worst-blighted of any in my neighborhood.

My soil is a clayey loam sloping slightly to the north, giving sufficient drainage. I have cultivated thoroughly, manured liberally with stable manure on previous years. I put on two or three shovelfuls of the salt and ashes to each tree. I also placed some around some peach trees, and they died almost immediately. If the salt did not do it, what did? I would like to be assured that it was not the salt. I live about 300 miles from the sea-board, in Ontario County, New York State, as good a spot to live in as anywhere; but pear trees *do* blight, and I am anxious to learn of a preventive and cure, and in the meantime shall use salt cautiously. [The trouble was probably caused by using too much salt. In large quantities it acts as a poison. It agrees with some trees better than with others. We have known a Poplar for instance, that was "salted" to such a degree that it appeared on the surface of the leaves and still the tree lived, and on the other hand we have seen shrubs killed in a few weeks by scattering too much salt about them.—Eds.] H.

A CURIOUS PEAR.

I have a small, stunted, dwarf pear tree of the Seckel variety, which I would have consigned as fuel to the cooking-stove long ago, but for its odd peculiarities. This little cripple never sets any fruit, but blossoms freely twice every year. This is nothing very strange, but what many pear trees will do here. But the singularity of this tree consists in the fact, that the blooms it shows in the fall have very large petals and are as double as those of a Rose. These flowers are very lasting. Last year the receptacle (or future fruit) of one of these double blossoms commenced to swell, but retained the large and conspicuous petals which had opened in September, until January, when a hard frost cut both the fruit and its petaline appendages. By cutting the fruit in two, and examining it, I found it was hollow, with the calyx end open, round, and inside of this opening the petals were inserted. This fall the tree, as to the doubleness of flowers, exhibits the same phenomenon, though so far no fruit has been forming. The spring blossoms are generally normal. G. M,

Houston, Texas, Nov. 17.

Floricultural.

SOMETHING ON DOUBLE FLOWERS.

GEORGE MARTI.

Botanists tell us that double flowers are produced by a superabundance of sap and great vigor caused by excessive nourishment and cultivation. As true as this may be in some kinds, in most cases it is just the reverse. For instance, any one that ever had a hand in raising double Petunias, Gilliflowers, Carnations, Chinese Primroses, Dahlias and the like, must have observed, that generally the smallest, puniest seedlings turn out to be the double ones, while the most vigorous, free-growing ones only give single flowers. Again, a young Rose-bush as long as it pushes vigorous shoots, produces flowers which will stand no comparison with those it puts forth when its stems and wood come to a certain degree of maturity.

Last year I shifted a perfect, full Camellia from a four-inch right to a seven-inch pot, in order to get more vigor into it, and prepare it thus for planting it out in the open air. This result I obtained; it made an astonishing growth, but at the expense of the flowers, which came later and were only semi-double. I have seen gardeners in Europe cutting back large specimens of Camellias whose flowers had become somewhat degenerated owing to too much wood-growth, and then grafting them again with the cut-off branches in order to obstruct the circulation of sap in a certain degree, and they attained the sought-for result. In Texas, the only way we can keep Dahlias true to color and form, is to raise them, every spring, new from cuttings. The first flowers of Zinnias are never so double as those that appear later in the season when the plants become tougher and the shoots less vigorous.

There is hardly any phenomenon which demonstrates more clearly the importance of raising and sowing sound and perfect seed in order to get a sound and perfect plant, than that which nature manifests in producing these impotent monstrosities, the origin of which may be traced to their parent plants and their seed. However well a double flower may please the eye, practically we must look at it as an imperfect creation of nature. Seed raisers in Erfurt, Prussia, so famous for raising choice flower seeds, crowd several single-flowered Stock (Gilliflower) plants in a small pot containing poor soil. They subsequently take care to keep the beneficial influences of dew and rain from these plants, and water is but sparingly applied to their roots—just enough to keep them alive. By this harsh treatment the plant produces only a few imperfect seeds the offsprings of which are the beautiful Stocks that delight our eyes. In Sanvitalia procumbens the small, defective, three-cornered seeds give the double flowers. This same law applies, in some measure, to Zinnias and some other plants of the order of the Compositæ. Seeds gathered from small, puny flowers of the Aster, which appear on lateral branches close to the ground, produce plants which give the fullest flowers.

The majority of annual and biennial double flower seeds, however, are raised from such double or rather semi-double flowers as have not all their usual organs transformed into petals, and are able to form, if not in the usual quantity they would if the flowers were normal, some vital seeds. Sometimes, if the stamens are all transformed but the pistil left, the latter has to be fertilized artificially with sound pollen from a flower with stamens, as is mostly the case with Petunias and Carnations. In this last case, however, only a small percentage of double plants may be counted upon. Many monstrous flowers originated directly by what gardeners call sporting, either directly by the plant or by some of its parts or through the seed. No true clue has yet been found as to the cause through which these sudden freaks of nature originate.

TWO WELL-KNOWN MAPLES.

SAMUEL PARSONS.

The Sugar Maple.

To all persons genuinely interested in trees, no species or variety is common. Though they were written about a thousand times, some new and interesting feature would always discover itself to those associating with them. I fancy few dwell sufficiently on the individual attractions and peculiarities of interest that mark different specimens of the same variety. In looking at the ordinary Sugar Maple, I will content myself with noting two or three points of value, that have struck me as regards its behavior in certain localities and positions. Of course, it is hardy, produces sugar, is more pyramidal than other Maples, and colors finely in fall, though not so finely as the Scarlet Maple. Every one knows, or ought to know, these facts; but does every one know why the Norway Maple, a slower-growing tree, actually surpasses the Sugar Maple in rapidity of growth on Long Island and in other sections where sandy land predominates? The Sugar Maple is considered the best tree in many sections, because it grows faster than the Norway Maple. The fact is that the Norway Maple succeeds in sandy soil, or, rather, endures sandy soil, better than the Sugar, a somewhat dainty tree that likes good, rich loam, though it be mingled often with a goodly quantity of rocks. The rocks, indeed, used do no harm to either tree, for rocks may be easily managed to secure good drainage.

The other point of interest in the Sugar Maple is a lawn-planting feature. It makes, in short, the best of road trees, but not the best of lawn trees, unless planted alone where its fine pyramidal form may show forth. If mingled at all, it should be mingled with lower, round-headed trees. Pyramidal trees, as a rule, do not group effectively together; some contrast is needed. The Sugar Maple, notwithstanding the general fertility of the genus in producing varieties, seems to have given forth no sports deemed sufficiently valuable to be perpetuated.

The Scarlet Maple.

Every one has seen the magnificent crimson and scarlet maple leaves of fall, but not everyone realizes that virtually one species of Maple alone produces this effect in most sections. Of course, on the hill-sides of Vermont and elsewhere, the Sugar Maples change and glow splendidly; but, ordinarily, we look along the swamps for the finest autumn leaves. Here abides, indeed, the Scarlet Maple, or Swamp Maple—Acer rubrum. Its habitat is decidedly damp, and hence the absurdity of attempting to transplant Scarlet Maples, six inches in diameter of stem, to the road-side, instead of nursery-grown plants. They may live; but their appearance, for many years, will hardly do the transplanter credit. There may be some excuse for attempting to move the American Elm from the woods, but none for moving the swamp-grown Scarlet Maple. Its nature is always tough and unyielding, hard to adapt to new conditions. Many are discouraged from attempting to plant young Scarlet Maples, even from the nursery, because they are crooked; but it should be remembered that all trees have a marvelous faculty of straightening themselves as they grow older. The tree, once planted in an erect attitude, and pruned from time to time to retain a due balance of branches, little serious trouble will come from early crooked growth.

In growth, the Scarlet Maple seldom distinguishes itself. It develops in a solid, firm, healthy, long-lived way of its own, not as rapidly, to be sure, as the Sugar, Silver, Norway, or Sycamore; but yet into size enough to class it decidedly with the large-growing Maples. I should say this, perhaps, with some qualification; for peculiar conditions develop strange anomalies of growth in all trees. The foliage of the Scarlet Maple always reminds me of that pertaining to the Silver Maple:—it is a little darker, and less irregular, and decidedly more compact. The leaves are smaller than those of either the Norway or Sycamore, and, in appearance, they occupy an intermediate position between the Sugar and Silver.

The varieties of the Scarlet Maple are neither numerous nor distinct. There is one really good one—a pyramidal form, distinct and strong-growing. The remainder, such as A. globosum and fulgens are not very distinct, and hardly merit attention on this occasion.

The Poultry Yard.

PREPARING POULTRY FOR MARKET.

As the season for dressing poultry for the holidays is near at hand, I have thought I would write for Rural readers a few directions which, if heeded, will put a good many dollars into the pockets of those who ship to large markets.

In the first place, the poultry must be well fattened; and however well the fowls may have been fed while at liberty, they will be greatly improved by being shut up for a week or ten days and carefully fed and watered. About a dozen should be confined in a warm well ventilated apartment about four feet square. The feed may consist of boiled potatoes and corn meal mixed in the proportion of two of meal to one of potatoes, and fed warm three times a day. The feed-dish should be such that all can eat at the same time. After allowing about an hour for each meal, the dish should be removed; and, if convenient, the apartment should be darkened, to prevent fighting and feather-eating. Nothing but clean food should be used. The above directions are for chickens. The poultry, at the end of ten days, should be fat enough, if in good, healthy condition when shut up.

On the day on which you wish to dress the fowls, they should have no food or drink. Take the chick, with the legs held firmly under your left arm; with your left hand open the mouth; then, with the right hand, insert a narrow-bladed, sharp knife about as far down as the ears; then give a sharp, quick cut across the roof of the mouth. If done neatly, the chick will bleed and die as soon as if decapitated, and there will be less dirt about. Now, go to work and pick it as rapidly as possible, *without* scalding. Nothing but experience will enable you to dress it handsomely. Commence at the head and pick *clean* as you go; do not go over the bird any faster than you can go, clean. If the skin tears easily, grasp with the left hand firmly on the under side, and with the right hand pull a few feathers at a time perpendicularly, until the tender place is passed over. In drawing the poultry, make a small incision above the rent, reaching down into it, and remove the intestines cleanly up to the gizzard, which should be left untouched; the crop, too, if empty, should be left in. The small feathers on the *last* joint of the wing may be left on and the wing brought forward, lifted over the neck and turned back over the shoulder. A little experience will enable one to do this in a second. It gives the birds a plump appearance and they pack better in the box. As soon as drawn, a string should be tied around the legs and the birds hung up in a cool, dry place for 12 hours, at least; but do not freeze them.

In packing, for chicks, use boxes about two feet wide, two and a half feet long, and two feet high. These are convenient and large enough. Do not use barrels; they are the worst kind of package. Before packing, the heads should be cut off and the blood wiped off clean, if such a mode of dressing is preferred in your market, as it is in Boston. Now place a little clean straw in the bottom of the box—enough to prevent the birds from getting bruised. Next pack a row of chicks lengthwise of the box, on their backs, with the feet towards the middle of the box and the necks turned under the backs. Put as many as you can in a row. Now pack another row opposite, with the feet of each row between the breasts of those in the opposite row. Put a little more straw, or coarse cloth, on top of these, and fill up the box in this way, putting on top straw enough to make the cover fit down tight. Ship to your consignee so that the consignment will reach him at least two days before the holiday for which it is intended. Send an invoice by mail; another in the package.

Never kill a poor bird for the Boston market. A little experience will enable you to tell when it is fat; by lifting up the wing, you can see the skin of the bird, whether a chick or turkey; and if fat, it is easily seen.

The above directions were written for chickens and fowls, but are applicable to turkeys and geese, excepting that turkeys fatten very well at liberty, and geese require to be kept a longer time confined, unless they happen to be in very good order when they are shut up. Geese do better with part corn and a mixture of beef scraps in their meal.

Bristol County, Mass.

Farm Economy.

HOW TO USE COTTON-SEED MEAL.

HENRY STEWART.

As the use of cotton-seed meal for feeding is to be encouraged, I wish to reply in this general way to an inquiry made of me by one of your readers as to the best methods of using it. Like all very rich foods, it requires to be fed cautiously; but its character is such that it comes in most usefully at nearly all seasons, but especially when cows are on grass or fed with roots. With good grass or green crops and plenty of roots for winter, I would desire no other concentrated food than cotton-seed meal, but when dry fodder only is given, it cannot be used alone safely. This meal is the cake left from the hulled cotton seed which has been pressed between hot iron plates to exclude the oil. The cake is ground into meal, and is of a bright-yellow color and a sweet, nutty flavor. It contains 10 to 20 per cent. of oil which has not been pressed out, and a very large portion of albumen and other nitrogenous matter. Chemically, its constituents may be given as follows:

Ash	6.28	per cent.
Albuminoids or flesh formers	44.69	" "
Crude fiber	3.33	" "
Carbhydrates or fat formers	26.29	" "
Fat	19.41	" "
	100.00	

The ash consists of, in 100 pounds of meal,

Potash	1.90	pounds.
Lime	.27	"
Magnesia	.89	"
Phosphoric acid	2.81	"
Sulphuric acid	0.07	"
Silica	.34	"
Equal to	6.28	

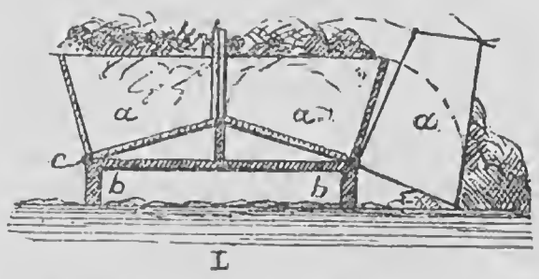
A ton of meal contains 38 pounds of potash and 56 pounds of phosphoric acid, with 78 pounds of nitrogen; it is thus rich enough in these elements to be useful as a manure

which purpose, indeed, it is extensively used in the South. But being so rich a food, it cannot be given to animals, except in small quantities: Two pounds daily are quite enough for a cow that is milking; a calf should not have more than two to four ounces; pigs will not thrive on it at all, as it is too rich for them, except when given in small quantities mixed with bran slops or cut roots. Horses do well on it, if given two pounds daily with corn meal; I think two pounds of it equal to 10 pounds of oats. But if fed too abundantly, the bowels are made very costive and the kidneys are affected. This is doubtless on account of its highly nitrogenous nature, as the waste nitrogen is eliminated from the system through the kidneys, and they are too actively excited by very rich food. The next ill effect is an inflammatory condition of the system, and in cows there is danger of garget, and horses suffer from irritation of the skin, sore mouth and hide-bound. It is as though a man were fed on extract of beef, rich pastry and such food only; when he would soon be in the doctor's or undertaker's hands.

When used judiciously and with a knowledge of its character and value, it is the cheapest (at its present price, $30 a ton,) and one of the most useful foods we have. Being rich in nitrogen and oil, it should be used with food rich in starch, as potatoes and roots. One pound of cotton-seed meal mixed with half a peck of boiled potatoes and mashed together, would make a good feed for a fattening pig or a milking cow, but the pig should have corn or bran for the second daily feed. One pound of cotton-seed meal I consider equal to two pounds of corn meal. If I were feeding store pigs, I would add a peck of the cotton-seed meal to a barrel of sour milk or milk slops, and give one feed of it every day; but I would in no case use the meal exclusively for food any more than I would feed myself on "pies and things."

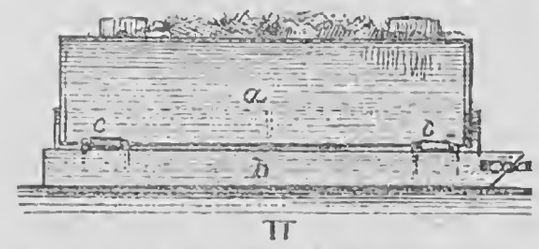
AN EASY-DUMPING SLED.

Our readers sometimes ask for illustrations of home-made farm implements which they can themselves construct during the winter months, when there is but little else to be done on the farm. Besides being inexpensive such implements often have merits that may be looked for in vain in shop-made goods. We here present an easy-dumping sled that is especially suitable for drawing manure, sand and the like, and which anybody handy with tools can make. A rear view is seen of the sled in



I.

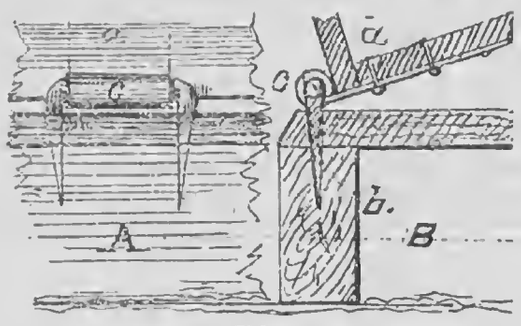
fig. I. Instead of one, there are two boxes, a, a, each of which is hinged to the corresponding runner. To bring the center of gravity nearer the outside and thus facilitate the dumping, the boxes stand on inclined planes and also flare outward. At a, on the extreme right, is shown the position of a box when dumped. It is easily turned back again, and a bolt is passed through the two adjoining sides of the boxes to



II

hold them together, or this may be done with a hook. The two runners, b, b, can be made of any durable hard wood, but to make the sled run lighter, they should be shod with iron.

Fig II gives a side view of the sled, and in fig. III is shown the manner of hinging the boxes more in detail. A is a side view, showing



III

how the staples are driven into the runners, and B gives an end view of the same, showing how the hinge is fastened to the bottom of the boxes, thus serving to strengthen the bottom at the same time.

ENGLISH FARMERS.

I must take a different view of the present condition of the English farmers, from that of the "Eds. Rural New-Yorker." English farmers are not a thinking class; they are mere tools in the hands of the owners of the land, who in their turn are entirely governed by the Professors of Agriculture. The farmers are *not* fitted by education to be trusted with the ordering of the land; the owners (the nobility mostly) *are* fitted by education, but unfitted by their social and political duties, and the only class which has brains adapted to the arts of production, and which is entirely untrammeled by outside influences, is the professional one.

The present arrangement is a happy condition for the agriculture of that country, and to a certain extent, it would be a blessing to America, but the everlasting Yankee "can't be quiet;" he must be farmer, owner and professor on his own land. It is a great undertaking, but he would not be a Yankee if any one else had to do his thinking for him—he would then be an Englishman.

Now the reason why we are beating the English on our own ground *and theirs too*, is that we are on the right track. In their little pent-up country, every man may follow one lead, but in our vast extent of soil and climate, every farm must have its separate thinker, and, lo! it has him.

To give a homely comparison in England the flock follows a few wise old rams, here every man rams around for himself. S. R. M.

Miscellaneous.

VAN'S VIEWS.

On Worm-Eaten Peas.

Now I have no wish to contradict any one; in fact, I do not believe my evidence will contradict, for I believe we are all working at different problems. I will not now raise the question of different varieties of pea bugs; for I am not sure there are different varieties, but may not the bugs have different ways of working? I think you will all agree with me when I say that if the germ be not destroyed, the pea will grow. [No, *we* cannot agree to this, because we know from careful experiments that such is not the case. Just in the proportion that the cotyledons (first leaves) are injured, in just that proportion the plant will be weakened. The germ (embryo) *must depend* upon the first leaves for nourishment. As they get less or more the plants will be weak or strong.—Eds.] I will not say how vigorous a growth it will make; but will merely say that it will grow. My seed peas last spring were badly worm-eaten, and I had doubts about their growing. A son of one of my neighbors said they would grow as well as any peas, and in proof thereof showed that the germ was in every case left perfect. Still skeptical, I sowed them, and he, taking a handful, counted out 25 peas, all worm-eaten, and took them home and planted them in a row in the garden. In due time 25 peas grew from those sown. In my field the peas grew thick enough, but were very uneven—when the first were ripe some were still in blossom.

Now, to my mind this proves that *some* worm-eaten peas will grow, or a very large percentage will; but that they are very poor seed for causes named. [We ask our friend to select weevil-eaten peas *only*, *himself*, plant them—give them every care and report the results to us.—Eds.]

Scrap-Books.

Don't cut up the Rural New-Yorker to make a scrap-book; don't cut up any paper that is in convenient shape for binding; but in many families there are several papers taken, which are not worth preserving and have many good things in them which one would wish to save. To meet this case, make a scrap-book. You can get, from a junk dealer, some old books with good bindings, as, for example, old blotters, day-books, journals, etc., of defunct firms; Patent Office reports, reports of Congressional committees, Census reports, etc. A neighbor, the other day, bought at auction sixteen volumes of the "Ku Klux Klan" reports, and nine volumes of the Patent Office reports for $1.60. At many newspaper offices they are sold still cheaper.

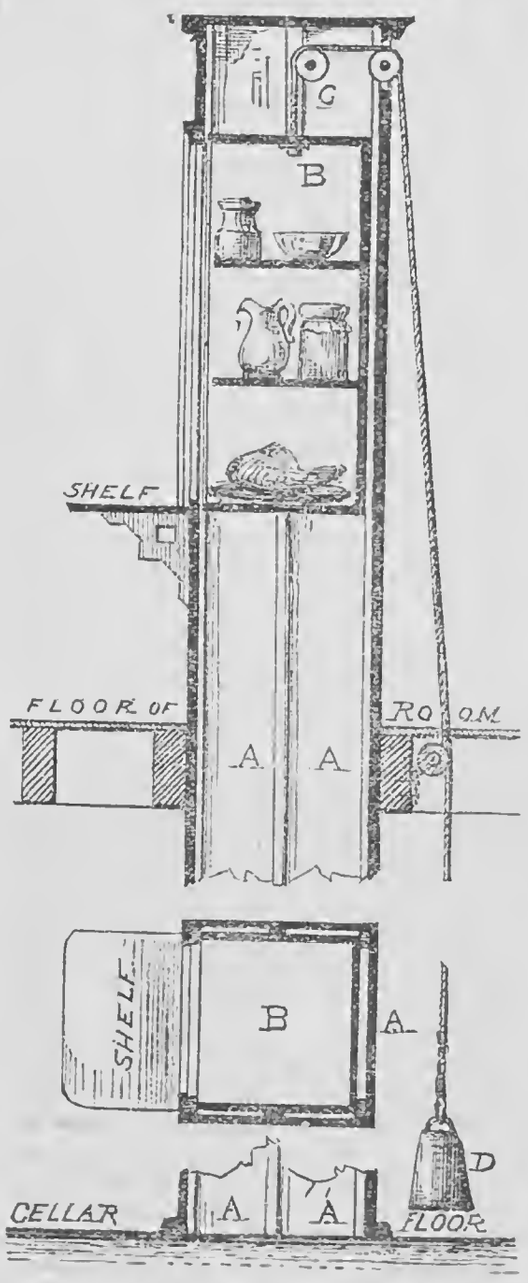
I would leave the fly leaves blank, and cut out, as I filled in, two-thirds of the leaves. Use flour paste; rye is best; never use mucilage. Go to a stationery store and buy a blank book indexed clear through: or, if you feel able, get "Gould's Index Rerum," (not Todd's). Always index under at least two titles. Study up the articles on indexing in the Rural for 1878, and common sense will greatly help you to get a good grip on indexing. It is tedious work, but it is worth a mine when done. It is not a bad plan to cut slips from political papers from time to time, which represent your views politically. A back look at these will give you an idea of how men change, and will tend to make a man less partisan.

Remarkable!

About thrashing time, wheat was from 80 to 85 cents, (No. 1 spring). Many farmers having machine notes to pay, rushed in with their wheat until it began to rise; then they paid part of their notes and got an extension on the balance, paying a bonus therefor. As wheat climbed up, they slapped their hips and looked wise. It touched $1 27 and then began to recede. Now when you meet them, they will ask you: "How's wheat?" and look blue. It seems improbable that wheat will again reach that figure before New Year's, and they begin to think of greasing their wagons again.

A DUMB-WAITER FOR THE FARMERS' WIVES.

This is the season of the year when the thoughtful farmer can "fix up" handy little



contrivances for the "gude wife," about the house, to make work less laborious and save time, and thereby money—and, better still, health. I know of no device that would be more acceptable to the majority of farmers' wives than a dumb-waiter from the kitchen, pantry or dining-room, to the cellar. The number of steps it would save in running up and down stairs, cannot be estimated—so many little things, like a pitcher of cream, an opened can of fruit, a fowl or joint of meat, the dish of tapioca or boiled custard, can then be sent to the cool regions of the cellar and brought up therefrom without taking a step.

The construction of such a device is a very simple matter. Construct a rectangular box, A, two feet square, and long enough to reach from three or four feet or more, if desired, above the floor, down to the cellar bottom. This may be made of inch boards. Sliding freely within this box is the carrier, B, without front or back and with any number of shelves. It should be three inches narrower than the box, A, to allow room for cleats to guide it in its passage up and down. To the top of the carrier, is attached a rope, C, which passes over two small pulleys, and thence down through the floor to the counterpoise weight, D. A door should be fastened to the front of the box above the floor.

Ontario Co., N. Y. William R. Brooks.

PAMPHLETS AND CATALOGUES.

The Audiphone.—This pamphlet of 36 pages, gives a full description of the device lately invented by Richard R. Rhodes, by means of which, it is claimed, the deaf can hear through the medium of the teeth and the deaf and dumb can hear and learn to speak. From the illustrations and description, this invention in its natural position looks like a rectangular fan with a convex end. When not in use for hearing, it can be employed as a fan, and so its real purpose may be concealed. When prepared for use as an aid to hearing, it is bent somewhat by pulling a string which connects the handle with the outer end. The extent to which it should be bent, or, in other words, the amount of tension needed for each person, and under different conditions, is regulated exactly by experience. Many testimonials of its efficiency, some of them from well-known public men, together with a number of newspaper notices and several interviews with deaf people who have tried it, make up the bulk of the pamphlet. The audiphone is sold only by Rhodes and McClure, Methodist Book Block, Chicago, Ill. Price for Conversational Audiphone $10; Opera, $15. We may have occasion to refer more at large, ere long, from practical experience, to this invention, which, if it does only a part of what is claimed for it, must be an invaluable blessing to a class than which none stands more in need of aid from science or ingenuity.

Circular.—New York State Dairymen's Association, the Annual Convention of which will be held in Stanton Opera House, Oneonta, Tuesday, Wednesday and Thursday, December 16, 17, 18.

Sale of Imported Cattle.

Philadelphia, Dec. 3, 1879.

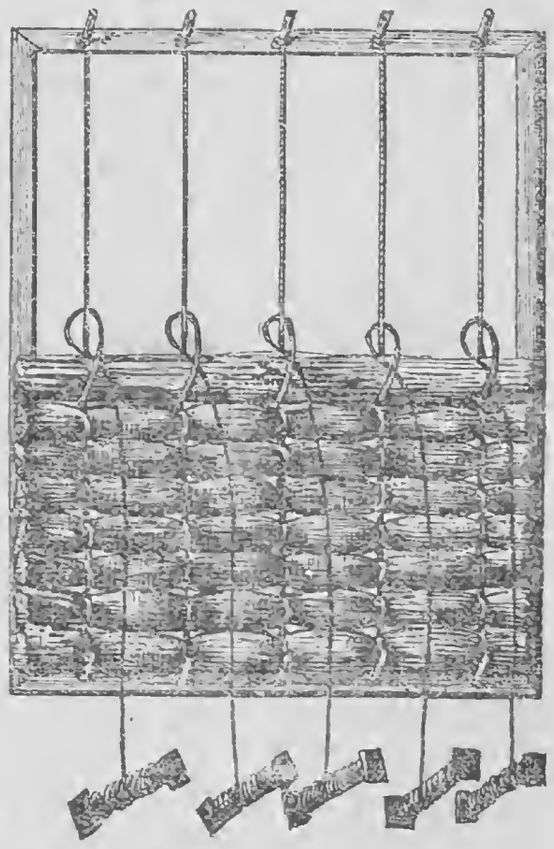
At the auction sale of imported cows and heifers from the British Isles, which took place yesterday at Herkness's Bazaar, the following were the most prominent lots offered and disposed of:—

Blythesome, calved Sept. 25, 1877; Mr. T. S. Cooper, Coopersburg, Pa.	$310
Apple, Oct. 2, 1874; ex-Governor Smith, of St. Albans, Vt	240
Kisber, Jersey bull, two years four months old; ex-Governor Smith	300
Winsome, July 2, 1877; Mr. S. H. Gilbert, Philadelphia	240
Lily, Feb. 13, 1877; Mr. R. F. Warner, Philadelphia	330
Pansey, Oct. 2, 1874; Mr. John E. Phillips, Baltimore	350
Ma Belle, Sept. 28, 1875; Mr. S. M. Burnham, Saugatuck, Conn	300
Lady Jane, April 6, 1877; Mr. J. D. Lippincott, Philadelphia	270
Coquette, two years old; Mr. E. P. Coffin, agent, Pittsburg, Pa.	205
Surprise, Oct. 18, 1877; Mr. Jas. Mooney, Philadelphia	240
Lively, Dec. 20, 1877; Mr. P. McElroy, Trenton, N. J.	265
Belle de Trodais 2d, April 8, 1877; Mr. W. R. McCready, Saugatuck, Conn.	400
Chevalier, Sept. 4, 1864; Mr. W. R McCready.	270
Gipsy Maid, Feb. 16, 1878; Mr. H. Watson, New York	230
Rosalind, Aug. 1, 1877; Mr. H. Watson.	230

H.

HOW TO MAKE STRAW MATS.

Every body who has had any experience with cold-frames and hot-beds knows how useful straw mats are as a protection against frost. Not only are they much more easily handled than straw or hay, but they keep out the cold better, and the surroundings can be kept more tidy. Nor are they useful as a covering for sashes alone, there are many occasions on the farm when straw mats are more handy for covering things than anything else, as, for instance, to throw over a heap of potatoes, if the cellar should not be quite frost proof, or for lining the inside of a cold stable, and the like. To bind straw mats, the first thing to be provided is the frame. It may be nailed together of three-inch wide strips of a one-inch thick board, and it should be of a size that will suit the purpose for which the mats are to be used. For hot-beds the mats should be at least a foot longer than the sashes they cover, so as to overhang a little at both ends. Mats about seven feet long and four feet wide, are as large as can be conveniently handled. At each end of the frame, put in five or six pegs, according to its width, and to these tie the strings serving



as "warp" on which the mat is bound. To each bottom peg, tie also a cord wound on a "spool," as shown in the engraving, and the operation of binding can commence.

Now take a small lock of clean, straight, rye straw, and turning the butts outward, make the first knot on the outside cord, by putting the spool above the straw and around the cord, as shown in the cut. Next, take a similar lock and in the same manner tie that to the cord on the other side of the frame, and then, keeping the tops straight in the middle of the mat, the remaining knots are tied. The process is very simple and, once started, there is no variation till the mat is completed. The cord used should be tarred hemp twine, as it will last longer than if not tarred. Straw mats properly made, not too roughly handled, and if spread out to dry whenever they have become wet, will last three winters as a covering for hot-beds.

Everywhere.

A PLEASANT JAUNT IN CALIFORNIA.

J. B. ARMSTRONG.

THERE have been gentle showers; a few more, and plowing and seeding will fairly begin in California, to continue through the next three months, until completed. The time of sowing makes little difference in the date of harvesting; though, as in the Atlantic States, it sometimes makes a difference in the product. November lies between the parched season of summer and the rains of winter. It is a month of Indian summer—a sort of neutral ground, where the seasons meet in amity. Sea breezes stop blowing, and the days and nights are the perfection of a calm, mild climate, with just enough rain to lay the dust.

For once, avoiding the customary routine letters of the correspondent about crops and fertilizers and insect pests, I will take you, my friendly reader, with me on a little trip across the Santa Rosa Valley, to Russian River, and beyond, a distance of twenty miles. You may ride, invisible, without once opening your mouth, if you choose, though using your eyes and ears for ten hours to almost as good advantage as if you had paid for an overland ticket and spent a week coming hither.

The road is level and smooth, and bordered all the way with farms. Picket fences, made of redwood, driven a foot into the ground, and wired at the top, are the common inclosures. The material must be hauled a long way: and, because the wood is as durable as red cedar, it is the custom to build neat picket fences at first. There are, here and there, fine old Oaks scattered over the fields where they are burning stubble to prepare the ground for the plow. Columns of smoke are rising in various directions, above the tree tops: and here, as we pass a well-kept place, three miles out, a man with a plow is running a furrow next the fence, to keep the fire away. His home-like, white dwelling stands back behind the orchard and a 10-acre vineyard. There are children and women gathering grapes in 50 pound boxes. The bunches often weigh four or five pounds; but the average may not exceed two. Some apples are on the trees, but more are on the ground, in golden piles, where they will remain all the rainy season until spring, unless sold. They keep as well there, in this climate, as anywhere.

We meet a four-horse wagon loaded with grapes piled high in boxes, with bunches of luscious Muscats and Black Hamburgs. The winery pays from $15 to $25 per ton for grapes. The average yield of a vineyard is about three tons an acre; the labor to produce a crop is much the same as for corn. But my invisible companion can no longer restrain his curiosity. He wants to know why the vineyard and the orchard are plowed and harrowed until not a weed can be found? Well, my dear sir, experience has shown that without cultivation we get no crop of fruit in this dry climate. In the course of our trip you shall see many orchards and vineyards gone to ruin for want of cultivation. This farm is a heartsome place to live on. There are 160 acres, with good improvements and water. It looks like some Pennsylvania homestead inhabited for generations; so rapidly do places age in this region. It would possibly sell for $75 per acre. Quite a grove of evergreens, Monterey Cypresses and Australian Gums, from 30 to 75 feet in hight, ornament the lawn. Their growth is so exceedingly rapid that one may grow a forest like these in five or six years.

At the next ranch we see a young chap riding on a chisel cultivator, an invention apparently of the Evil One to promote laziness. He is driving four mules, and trying to scratch in some of the shattered grain left from the harvest, for a crop of hay next year. On fair land, with a favorable season, he *may* cut two tons of hay per acre; the likelihood, however, is that he will not get one. Our best farmers plow and sow as for a wheat crop.

At the blacksmith's shop, which is surrounded with horses waiting to be shod and wagons and farm implements to be repaired, we meet O. A. Taylor with a load of pumpkins of most preposterous size, even for California. Something like the following colloquy takes place:

"Good morning, Mr. Taylor. What do those pumpkins weigh?"

"They average over 100 pounds each."

"How many tons do you grow on an acre?"

"This year the crop is short; it will not exceed 40 tons on an acre and a half. Last year we grew 75 tons on a lot of one acre and three-quarters."

His land is a rich, alluvial deposit, from the overflow of Mark West Creek. Driving along, we find the journey enlivened with the songs of blackbirds and larks. The blackbirds feed in large flocks over the stubble fields, and are a great pest to farmers. Larks perch on the fences, making music beyond compare finer than any warblers we ever heard. Their call begins low and clear, and swells with prolonged and musical notes till the air is full of melody. They are numerous, and add a great charm to out-door life.

We cross the Laguna, dry in the summer, on a long bridge resting on piles. The timbers and flooring are bolted and clamped down firmly, for it is sometimes many feet under water during the rainy season. Even now, the waters are appearing in pools. They always rise mysteriously before the rains set in. This, perhaps, is owing to the shorter days and lessened power of the sun's rays in autumn.

We meet other teams; some are loaded with wheat. My invisible friend wants to know why all the men wear full, shaggy beards, and long, unkempt hair; why they affect slouched hats with broad brims, and big boots with trousers stuck in the legs. Well, we suppose it is because most people here have been miners, or soldiers, or frontiersmen, roughing it always and delighting in adventures of all kinds. The unambitious, easy-going citizen stayed at home, while California is populated with a great many men who do not take kindly to civilization. They pride themselves upon their rough manhood, and the kindly climate enables them to live almost in the open air. There is no winter, and nothing is needed but a shelter from the rain. Still, there are many others who possess all the comforts and refinements of older communities.

The mountains have been in view all day, at first distant and blue, with dark and bright patches of color, forests and pastures, on their sides. Early in the morning mists curled around the loftiest peaks; as the sun's rays gained power, they gradually dissolved in snowy fleeces and drifted inland across the valley. When we stop to water our horses in Greene Valley Creek, my sight-seeing companion may gaze at the sands and pebbles shining in the water. For, though we have been long enough here to know better, one cannot but think, "Who knows, there might be quartz somewhere above, and gold may be glittering in the sand?" And so there is wherever there are streaks of black sand; but it is not often in paying quantities. Pits of charcoal burners are scattered among the low hills, and the air is heavy with smoke.

A few miles beyond we come to the ranch of Lawson Ross, where four cork trees are growing in his lawn. The seeds were furnished by the Department of Agriculture at Washington, in 1858. They are about twenty feet high and a foot in diameter, with evergreen foliage and bark thick enough for vial corks. Mr. Ross grows a meadow of Texas Mesquite grass on his wet land, which yields two tons of good hay per acre. He states that it has driven the red sorrel out entirely. In his other fields he only succeeds in keeping the latter pest down by raising hoed crops and frequent cultivation. The writer does not know, but thinks the Mesquite would not be hardy north of latitude 35 deg. north, on the Atlantic side of the continent.

As we approach the river, the character of the country changes. We climb hills, and descend long defiles bounded by forests of huge Redwoods, and Fir, and Laurel; all valuable timber for the carpenter. Along the streams, growing wild, are Snowdrops, Azaleas, Calycanthus, (Sweet-scented Shrub) purple and white Ceanothus, and Ferns with great branches like young Palms. Though well along in November, the foliage is green, except along the water, where there are thickets of Maples and vines, with pretty red and yellow leaves, illuminating the woods, like a fringe of fire. Our drive ends at the cabin of a woodman near the river, where, as we drive through the ford, there is a fifty-acre field of Alfalfa, knee-high and growing rapidly. Five years ago it was a dense wilderness of Redwoods, as attested by the stumps yet standing. The Korbel Bros. sawed up the timber, cleared off the land, put in Alfalfa, and stocked the place for a dairy. The cattle are not pastured; but the hay is cut three times a year, yielding from one ton to a ton and a half per acre each mowing. It seems as if every condition for success exists. The soil is a deep, sandy loam that preserves its moisture; and its fertility is evidenced by the enormous growth of timber which made over 100,000 feet of sawed lumber an acre. The owners state that Alfalfa hay is the equal of any kind for stock. They were familiar with it under the name of Lucern in Europe, and say there can be no doubt of its success anywhere in the Middle States, if planted on good ground. The soil must be plowed deep and made as mellow and fine an an onion bed before sowing. Twenty-five pounds of seed per acre, bushed in, is the proper quantity, and corn-planting time is the season for sowing, except in California.

Santa Rosa Co., Cal., Nov. 15.

RURAL SPECIAL REPORTS.

OHIO, Clarksfield, Huron County, Nov. 25.—Wheat was a fair crop, from 15 to 40 bushels to the acre. Hay was a very light crop—not more than one-half an average one. Corn was scarcely an average crop, owing to the cool weather. Potatoes were a light crop, but of good quality.

This township is principally devoted to the dairy interest. We have three cheese and butter factories in our township. The season has not been favorable for this branch of industry, owing to short pastures and low prices; though, perhaps, the latter part of the season will pay better. There are about 1,200 cows kept in this township—five miles square. Notwithstanding the low prices of cheese and butter that have prevailed for two years, I am satisfied that dairying has paid *better* than anything else we could have done on our lands here—I mean to those that stuck to it. The trouble with many is, they buy a lot of cows, milk them one season, or, perhaps, two, then sell them for what they can get; and, when they settle up, if they don't have their pockets all well filled with cash, they blame the business. I have kept a dairy of from 15 to 30 cows for the past ten years, and am well satisfied that I could not put *my* farm to a better use. But, like any other industry, to insure success requires careful management. Of the seeds received of you last spring, I can truly say they have more than paid me the cost of your paper, as the plants and their fruit have been a constant source of pleasure from their springing up to their maturity. The Golden Rural is a good tomato; but not quite equal to the Acme, in that the latter is larger, a little more solid, of a little better flavor, and has the advantage of the Golden in appearance. They ripened about the same time, with me. I had 14 pounds of healthy potatoes from the two small Beauties received. I planted the six Voorhis Watermelon seeds by the side of my Blount corn; five of them came up and produced 16 melons, weighing 196 pounds; the largest weighed 23 pounds. All ripened, though four of the late ones were not as good as the others, and were quite small; the others were exquisite. I regard this as an excellent variety, having a very thin and tender rind, affording a larger eatable percentage of the melon than any other kind I have ever raised. My Blount corn has done remarkably well, of which you will hear more from my special premium report. A. J. B.

OHIO, Mt. Vernon, Nov. 26.—The weather is cold here at present, but it is all for the best, as many things were needing a change, especially wheat that was sown early. When I last wrote I predicted a rise in the potato market, but, alas! the tubers have done as the RURAL predicted—gone down, down. They sold readily at 40cts. and 50cts. at digging-time; now they bring only 30 and 35cts. I had about 800 bushels myself, but by watching the RURAL's general reports, I sold them from the field at 40 and 45cts. We have a ready market for all farm and garden produce now. Wheat sells for $1.15 per bus.; oats, 37cts.; corn, 40cts; potatoes, 30cts.; beans $1.50; cabbage $4 per 100; celery, $3 and $4 per 100. M. W.

WIS., Freedom, Outagamie Co., Nov. 29.—We could not ask for more favorable weather for work on the farm than we have had this fall. Plowing is mostly all done. Fall wheat, of which there is more than the usual amount sown, has made a fine growth and is looking well. Roads have been good and business lively, especially that of marketing the last season's crops. To-day the wind is in the northwest, and it will freeze quite hard to-night; in fact, the weather is decidedly wintry, as the circle drawn around the dry maple-wood fire in the open fire-place plainly indicates. J. R.

KANSAS, El Dorado, Butler Co., Nov. 24.—Our most thrifty farmers are from Illinois, Michigan and Ohio. Last year, on a special plot of ground, I planted two kinds of corn—the Chester County Mammoth and Kansas Yellow Dent. The latter has a very large, long kernel, and the former a very long ear, with small kernels. I crossed the Dent on the Mammoth, to get the large kernel on the large cob, with perfect success. I intend to follow up the cross, as I am so well pleased with the corn. I estimate the yield to be over 100 bushels of shelled corn per acre. Next year I shall set apart an acre of ground for experiments, and test all the different kinds of corn I can obtain. Why should not the readers of the RURAL, in every section, experiment with corn and other farm products, and report their experience through the columns of their paper? Such a practice must benefit farmers generally, besides benefiting and interesting the experimenters. [We think so, too.—EDS]. I have everything ready for winter, but as yet the weather is summer-like; though we expect every day a blizzard—the name given here to a thoroughly wintry storm. H. J. B.

OREGON, Oakland, Douglas Co., Nov. 13.—We have had splendid weather for seeding. Lots of grain have been sowed, and it looks well. No frost to hurt anything yet. H. C. W.

VA., Henrico Co., Nov. 29.—The weather has been dry for the past three months; our crops however, were very good for the season. Early planted corn was very light, but that planted late was good. Early potatoes were almost a failure, and late ones not much better. Wheat was a fair yield. Oats were very light. Hay was about half a crop. Sweet potatoes were the best of all our farm crops, yielding from 150 to 200 bushels per acre. I tested six kinds of tomatoes the past season—Acme, Golden Rural, Early Conqueror, Canada Victor, Trophy and Hathaway Excelsior. The Acme ripened first; next came the Conqueror; then the Victor, followed by the Golden Rural and Excelsior, and last but not least, the Trophy. All the seeds were sown at the same time; the plants were set at the same time, and all received the same treatment. Give me for early market the Acme; for late market, the Trophy, and for preserving, the Golden Rural. Wheat is worth from $1.30@1.40; oats about 35c. per bushel; corn 45@50c.; potatoes, Irish, 60@70c.; sweet, 45@50c.; butter, 25@30c. per pound; eggs, 28@30c. per doz.; apples, $1.75@2 per barrel; hay, first crop, $15@18 per ton; second crop, $12@15 per ton. W. B. H.

N. C., Warren Co., Thanksgiving Day.—Beautiful weather for closing up the harvest of corn or cotton. Wells and springs very low. No rain to soak the ground for nearly, or quite a year. Cotton, 11c. Tobacco market opening strong; best brings 60c. M. B. P.

S. C., Aiken, Aiken Co., Nov. 20.—Yesterday a couple of inches of snow fell here and now lies on the green bushes and on the Roses in full bloom, a rare and beautiful sight as they peep out from their snowy mantle. This is the first snowfall here in three years. S. O.

ARKANSAS, Augusta, Woodruff Co., Nov. 25—It is pleasant to read such communications as appeared, from one of your Arkansas correspondents, in the RURAL a few weeks since. A more intimate knowledge of this much-abused portion of our country would soften the asperities of many minds and be of material advantage to the State. I indorse all your correspondent has written, with the exception of what he has said of the sudden changes of climate; my experience of a ten-years' residence has been that the changes are more sudden and severe than any ever experienced at the North, the thermometer occasionally falling, in winter, 40 and 50 degrees in a night; but, with proper care, these changes are not attended with any ill effects. The season has arrived at a point when farmers see the results of their year's work, and are wearing smiling faces. The cotton crop, though fully a third short of last year's, has, owing to the remarkably fine weather all during the picking, been saved in fine condition and brings the top of the market. The crop has been made at less expense than in years previous; consequently less goods were bought on credit, and there is more money in hand now to show for the year's labor. The "credit system" in farming is year by year "growing smaller by degrees and beautifully less." Cotton is an expensive crop to raise, at best, but by giving more attention to hogs, corn and small grains, our farmers are getting to be more self-supporting, and at the same time they have nearly gotten rid of that incubus of debt contracted during the flush times succeeding the "surrender." Although cotton is the staple here, the soil and climate are very favorable for cereals. Corn thrives wonderfully, yielding 35 to 40 bushels per acre under the ordinary scant attention given it, and under good cultivation running as high as 65 bushels. This last figure was the average yield of a fifty-acre field last year, as given me by the owner. He also says that he sold none for less than 50 cents per bushel, and part of it he sold at $1 per bushel. In this heavy bottom land soil wheat does not do very well, though it is raised in spots all over the county, and a steam flouring mill at this place converts it into flour. Small fruits do well, and it is from Arkansas, I think, that St. Louis gets her earliest supplies of strawberries, etc. The attention is not given to the raising of fruits that should be, and there is money in the business to the man that will take hold of it understandingly. Last season I followed out the RURAL's instructions in regard to growing tomatoes on a trellis, and like the results so well that I propose this winter to put up a permanent trellis for my next season's vines. The fruit ripened earlier and better than by the old method, and the vines were loaded with fruit in all stages of maturity when they were killed down, about four weeks since, by a heavy frost. Cotton is selling at 10½c; corn, 65c.; Irish potatoes, $1 25; sweet potatoes, 75c.; butter, 25c.; eggs, 30c.; chickens, $2.50 ₰ doz., beef, 8@10c. ₰ lb. S.

The Querist.

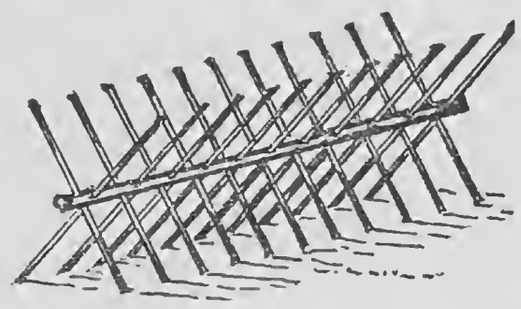
ANSWERS TO CORRESPONDENTS.

Hurdles for Sheep.

J. H., Marshall, Wis., referring to Prof. E. W. Stewart's article on Mutton and Wool, in RURAL of Oct. 11, asks what is meant by the rolling hurdles therein recommended for the purpose of confining sheep to certain limits on different parts of the farm.

ANS.—The rolling hurdle common in England, and used to a considerable extent in this

country, is made somewhat like the old revolving hay-rake. Each is 12 feet long and made of stout poles bored with two series of holes 12 inches apart. Stakes six feet long are put into these holes, so that they project from them three feet on each side of the pole. One row of the holes is bored at right angles to the direction of the other, and when the stakes are all properly placed they form a hurdle, the end of which looks somewhat like



the letter X. The engraving shows how the hurdles are made. In using them a row is placed across the field, a strip of any desirable width being set off, upon which the sheep feed. After they have eaten up all the herbage on this strip and all they can reach by putting their heads through the hurdles, the latter are turned over, exposing another strip of forage, and so on. By using two rows, the sheep may be kept in a narrow strip between them. By this means the droppings of the sheep are very evenly spread over the field, which is very richly fertilized by them. When the crop to be eaten off is a heavy one of clover, rye or other herbage, it is sometimes mowed and thrown on top of the hurdles, which then act as a rack, or pitched inside them. This may be made a valuable way of improving run-down land, or, indeed, any other sort of land. A much longer iron hurdle has also been lately introduced, built fence-shape, with two wheels attached to a horizontal cross-piece at each end. As this is very durable, it would be the cheapest, perhaps, in the end. Mr. Mechi, the well-known English farmer, uses them, and in England their employment has been extending since their introduction, half a dozen years ago.

Miscellaneous.

W. V., Oxford Center, Canada., asks, 1, to name the six best varieties of Grapes for culture under glass; 2, would we recommend the Welcome, a bunch of which was recently illustrated in the RURAL, and the Syrian Grape; 3, how far apart should plants be set in a vinery; 4, a reliable nursery from which to purchase vines; 5, a good book that treats of the culture of Grapes under glass and in the vineyard; 6, agents are offering a new hardy white Grape named Pocklington, is it all it is recommended to be; 7, do we accept Canadian bank bills for subscriptions.

ANS.—1. Muscat of Alexandria, Victoria Hamburg, Black Hamburg, Muscat Hamburg, Royal Muscadine, and White Tokay. We cannot say positively that these are the best for your purpose, but they are rated first-class varieties. 2. The Welcome is a very superior Grape as yet but little known. We do not hesitate to recommend it for trial. The Syrian is a very strong grower and produces some enormously large bunches, but the berries are not so sweet and richly flavored as some others. The bunches will keep well on the vines till Christmas. 3, It will depend entirely upon the system of pruning. If each plant consists of a single cane reaching to the top of the house with spurs along the whole length, which is an excellent way of training vines under glass, they should be about three feet apart. 4. There are many reliable nurseries, and it would be unfair and possibly incorrect, should we point out one firm as superior to all others. Purchase direct from an old and favorably known nursery. 5. Fuller's Grape Culturist is perhaps as good as any. 6 There is a new white Grape named Pocklington of fair quality, but whether it is all the agents claim it to be, we cannot say, since we do not know how rosy they paint it. Time alone can tell. 7. Yes.

J. R. M., Falmouth, Me., asks, 1, what kind of trees would form the best wind-break in that section; 3, whether Salix pentandra, seeds of which the RURAL intends to distribute, would do for the purpose, and, if so, where can cuttings be obtained; 3, fruit trees from New York nurseries have not thriven there, as they take a long time in coming into bearing, while many have died out, and he asks whether this is due to some climatic cause or to a probable division of the roots by nurserymen in root-grafting.

ANS.—1, It is not stated whether evergreen or deciduous trees are desired. If the first, Scotch or White Pines, disbudded or cut back from year to year. In this way as dense a growth as need be, can be effected. 2, We have no doubt that Salix pentandra would prove hardy in your climate. It will bear cutting back to any extent, grows compactly and would prove, we should suppose, a suitable and handsome screen. It is offered by our prominent nurserymen, catalogues of which will be noticed early in the spring. 3, Climatic rather than for the other reason given.

A. W., Tampico, Tenn., asks for the address of some reliable dealers in poultry, game, etc., in this city.

ANS.—We are pleased to give our readers any information in our power, whether such information gives "free advertising" to individuals or not. Our Querist columns, during the past two years, offer abundant proof of this. Such questions as the above, however, we would prefer not to answer, for the reason that we do not *know* who are trustworthy, or who are not. What we consider fair treatment, others may not. Because we have been treated fairly by a certain dealer, or because a certain dealer bears a good reputation, we have no right to assume that others in dealing with him would be well satisfied. We give the following name, without any indorsement whatever: W. Carr & Co., 37 Pearl Street, will correspond with our inquirer, if he sends him his address.

C. M., Black Creek, N. Y., asks: 1, whether the riding-saws, advertised in the RURAL, are capable of doing really good work as easily as it is advertised they do; 2, the address of a firm in this city that will supply harness trimmings in small quantities and of good quality.

ANS.—We have not personally used a riding-saw, but hear that they are giving great satisfaction wherever used. 2, The Union Hardware Co., New York.

H. F., Mathews County, Va., asks whether a certain firm in this city is trustworthy in business matters and desires us to answer at once by mail.

ANS.—We do not feel justified in expressing an opinion on the business standing of men doing business in an ordinary way, unless we *know* that our friends are pretty sure to lose by dealings with them. How can we answer by mail to the above address?

B. M., Chazy, N. Y., asks where medical works can be obtained.

ANS.—From the American News Company of this city all works on any subject, published anywhere here, can be obtained at publishers' prices. Lindsay & Blakeston, 25 South Sixth St., Philada, Pa., are publishers of medical works.

J. H. C., Toledo, Ohio, asks why we do not put the full address of each contributor at the end of his article.

ANS.—Most of our contributors would seriously object to the trouble and correspondence that would, most likely, be entailed upon them. Then there are other good reasons for the rule we follow.

P. C. A., Berenda, Fresno Co., Cal., We cannot tell from the seeds sent us what the plant is. Leaf and flower would be necessary. We would gladly distribute our seeds and plants *now* if this were possible, but for the rest of the year, the business of the subscription department is the most we can attend to with our present facilities.

COMMUNICATIONS RECEIVED FOR THE WEEK ENDING SATURDAY, NOV. 29.

Various.

WHAT OTHERS SAY.

SHIRLEY HIBBERD ON POTATO-GROWING.—From a long article in the Mark Lane Express (England), we cut out the following notes: "The potato requires for its perfect development a dry, fertile and mellow soil, free from large stones, and fully exposed to the light and the sun during all the daylight hours. The beautiful samples that are seen in winning collections at exhibitions are the produce, generally speaking, of soils that are of a clean, pulverulent texture, and which, while they afford abundant nutriment to the plant, permit the tubers to expand equally in all directions, so that they attain their full size and natural shape quickly and without encountering obstructions that would mar their beauty. In a lumpy or strong soil the tubers are necessarily misshapen, through the impediments to uniform expansion. In a pasty loam or stiff clay the resistance to expansion is equalized, and the uniform compression co-operating with excess of moisture in such soils, produces tubers that have the consistence of putty, and to the educated palate are simply uneatable. Hence, the self same sort, however good initially, may be handsome and eatable when grown on a light, friable, warm, dry soil; but when taken from a stiff clay or badly worked loam, will be more or less deformed, and such as to be unfit for any respectable table, so far as regards high quality. . . . Perfect drainage seems to be the very first requisite to success. From the moment the plant becomes water-logged it has received its death blow, . . . When all the circumstances favor the plant it yields a greater gross weight of wholesome food than any other known plant of temperate regions. . . . My own idea of a good sort includes, in addition to healthiness and productiveness, beauty of form and white flesh of a dry, mealy texture and delicate, nutty flavor. . . . For general usefulness, as adapted to resist disease, there is nothing to equal Sutton's Magnum Bonum, which should be planted in rows not less than four feet apart, and will pay better on strong land at five feet than at any less distance. . . . Ripe whole tubers of middling size, say from four to six ounces, are to be preferred; these should be fully exposed to the light to render them green and hard and promote their keeping. When planting time is near, the seed should be spread out in full daylight and be slightly sprinkled with water to promote sprouting, and when the sprouts are half an inch long, and stout and firm, the planting should be proceeded with. Sets that have made long white sprouts in the dark are not to be desired. . . . As to the manner of planting, it must be determined by the nature of the soil. On light, dry land the sets may be put into trenches six inches deep, but on heavy land they should not be put into trenches at all. They should be grown above the level, not below it. The land being well prepared, the sets should be laid on the level and be covered with soil from between the rows. In due time the ridge thus formed should be added to by the process of molding up until in the end the plant will stand high and dry to catch the sunshine, and the channels between the ridges will carry away surplus moisture. On this point I wish to make an observation of very great importance. It is the custom everywhere—a most injurious custom—to mold up too much and too suddenly. I have found it possible, in an unfavorable season, to obliterate a crop by molding up too soon and too high, and yet when the work was done it looked well to see the green shaws riding on the tops of high ridges. On the same land the same season I have had good crops that were not molded at all, and that in many instances grew out of the ground and became green, so that a large proportion was fit for seed only. This proves the need of care as regards the molding. But I approve of molding, because the tubers are formed above the level of the original planting. . . . As regards manure for potato land, it should be remembered that the plant is characterized in respect of its chemical constitution by its large proportions of potash, sulphur, salt and phosphorus. It follows that alkaline and phosphatic manures are particularly adapted to produce profitable results. On any and every kind of light soil that is well drained, farm-yard manure is invaluable. The Yorkshire plan of laying a coat of long dung in the trenches and putting the sets thereon answers admirably, as may be seen by the ash-leaf potatoes that are sent from the West Riding to the London and other markets. . . . It is better on strong land to plant potatoes without manure, in fields that were liberally manured for a corn (grain) or a fodder crop, to which the 'noble tuber' forms a suitable rotation. On poor, sandy soil, kainit and superphosphate of lime are the cheapest and most effective fertilizers. On clay land, a dressing of lime may often prove advantageous, and magnesian lime, which is generally objectionable, will answer the purpose; for the potatoes will soon take the magnesia out of it. In fact, so useful to the potato are alkaline salts that many of the mineral waters that run to waste would be of incalculable service in dry, hot seasons if they could be cheaply employed to irrigate potatoes. . . . I have said nothing about change of soil and change of seed, because there is no crop grown but is advantaged by occasional changes of soil and seed. . . . I could cite many instances of potatoes yielding good crops on the same plots of land for twenty years in succession. But the world is not governed by exceptions, and in potato-growing, as in other matters, rules represent experience, and it is a safe and good rule to shift potatoes about instead of keeping them for a number of years on the same plots of land.

TULIPS.—"Some surprise is from time to time expressed by Tulip growers that the self-colored, or 'breeder' Tulip, preserves its characteristics for a time, and then, at the expiration of from two to six years, 'breaks' into its true character and becomes 'rectified.' Why so much surprise should be felt at what is a very ordinary phenomenon in plant-life is in its turn a matter for surprise. The case is only exceptional in degree. Every plant, and every part of a plant, like every animal, passes through more or less distinctly defined stages, the duration of which is extremely variable. Surely it is no unusual thing for a plant not to manifest its true character all at once, but only after an interval. The little Heath-like Retinosporas, for instance, are but the juvenile forms of a tree which in the adult stage is very different in appearance. Sometimes—why, we know not—the juvenile stage is never grown out of; the plant remains a baby though old in years. In the case of a Tulip, the seedling bulb is doubtless in a condition nearest to the original wild form, but as years roll on it acquires force and vigor, and under the gentle persuasion of the grower it breaks into a bravery of apparel unknown in the juvenile state, and still less frequent in the wild state." The above is from the Gardeners' (London) Chronicle. Our Red Cedar often—indeed, generally—shows this youthful, feathery form in very young plants. "Tom Thumb" Arbor-vitæ retains the feathery form for some years. But we have never yet seen a plant that would not, in six years, throw out shoots of the parent form.

PACKING ORANGES.—E. Williams of Montclair, N. J., says, in the N. Y. Tribune, that he has received oranges from Florida with a loss of less than two per cent. and others a total loss. He attributes the chief cause of failure to the handling by the average "baggage-smasher." A sudden jar or slam of the box bursts the fruit, and stored in the vessel's hold with a temperature none too low at the best, but greatly enhanced by the heat of the furnace and boilers, fermentation and decay are immediate and rapid. With judicious selection of the best varieties, proper care in picking and packing, and anything like decent handling and common sense in storing by the forwarders, the best Florida oranges can be placed on our Northern markets with a mere nominal loss; and with better transportation facilities and lower freights, the time is not distant when the poorest of our laboring men can enjoy the luxury of Florida oranges. The freight from the Mediterranean is less per box than from Florida. A little more competition would help things.

BAD BUTTER cannot be made good; "not all the spices of Araby" can do it. The taste may be disguised, but it is there still. The usual method practiced by dealers in order to improve inferior butter is as follows: Cut up the butter into thin slices, wash it in a brine of salt and carbonate of soda, and set it away for 12 hours in a brine made of salt, with four ounces of sugar and one ounce of saltpeter to every gallon. Then work the butter in fresh water, salt it with fresh salt at the rate of one ounce to the pound, adding to the salt one-fourth as much white sugar and one-eighth as much saltpeter finely powdered. The butter should be worked in one of the rotary butter-workers. It is then packed in sweet, new firkins and sold without delay.—N. Y. Times.

JERSEY MILK.—The peculiarity of Jersey milk, says Dr. Sturtevant in Land and Home, seems to lie in its abundance of cream, in its indigestibility as compared with other milks. It is a well-known complaint among Jersey breeders, over that of the breeders of other stock, that their calves scour to a troublesome degree, which is ascribed to the richness of the milk. *The cause at the bottom is the difficulty of digesting the curd of the Jersey milk.* Indeed, it seems probable that a delicate infant can scarcely be reared on Jersey milk; and that oftentimes illness and death among children brought up on the bottle, are to be ascribed to this injurious effect of the kind of milk used, rather than to its quality. Jersey milk is the milk popular with grown-up people in rugged health. The Jersey is, hence not the family cow to be praised, if by family we include the infants and growing children.

ENGLAND'S CEREAL NEED.—Our correspondent, Mr. J. B. Lawes, of Rothamsted, England, estimates that, as 5½ bushels of wheat per head of the population of 34¾ millions, are annually consumed, they will require a total amount of 23¾ millions of quarters, of which 18¾ millions must be supplied from stocks of foreign sources. The average weight per bushel this year at Rothamsted is only 53⅜ lbs., whereas the average weight for the preceding eight years has been 61¼ lbs. The farmer will thus have to deliver more than nine bushels to supply the same weight as in eight bushels of the previous season. So much for the effect of circumstances beyond the farmer's control.

COMPARATIVE VALUE OF FISH SCRAP AND HORSE MANURE.—Fish scrap and horse manure contain in 1,000 parts the following:

	Fish Scrap. Pounds.	Horse Manure. Pounds.	Value. Cts. ₩ lb.
Nitrogen	90	5¾	25
Phosphoric acid	135	2¾	10
Potash	3	3	6
Water	126	713	..

—Prof. Johnson.

PIGS.—Parsnips, carrots, Swedish turnips, and especially mangel wurzel will all fatten pigs. These roots ought not to be given in a raw state, but always cooked, and mixed with beans, peas, Indian corn, oats, or barley, all of which must be ground into meal. When pigs are fed on such cooked food as we have stated, the pork acquires a peculiarly rich flavor, and is much esteemed, especially for family use.—Dublin Farmers' Gazette.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address
THE RURAL NEW-YORKER,
78 Duane Street, New York City.

SATURDAY, DEC. 13, 1879.

FINAL notice is given that those competing for the Corn Prizes offered by the RURAL NEW-YORKER, must send in their certified reports prior to January 1st. The prizes shall be awarded thereafter as soon as we can determine who are entitled to them.

SPECIAL NOTICE.

THOSE who are interested in extending the circulation of this journal for 1880 are solicited to send for specimen copies, premium lists and posters—any or all—which will be forwarded promptly without charge. It is our wish and intention to make the RURAL NEW-YORKER for the coming year more attractive, more valuable than ever before, whether its circulation be increased or remain at its present number. We ask of our present subscribers that, for the benefit of agriculture and horticulture, they will state to their friends, at fitting times, the estimation in which they hold this journal, whether such estimation be one of approbation or disapproval. It is a plain duty that rests upon us all to encourage that which seems worthy of success; and the duty is equally plain that we should not countenance any public enterprise which does not strive to promote the welfare of the public it professes to serve. The art and science of agriculture and horticulture have assumed in our country an engrossing magnitude far beyond anything we could have dreamed of a few years ago; and among our most urgent needs are representative journals that, original, conscientious and independent, shall forcibly construe and advance the interests involved.

WE would state to the readers and subscribers of the RURAL NEW-YORKER that we would be happy to send them specimen copies, free of charge, in any numbers that they would kindly distribute among their friends, upon receipt of a postal card making the request.

ATTENTION is called by M. J. Poisson, of France, to our Western plant, Mentzelia ornata, as a beheader of flies. Some of the leaves secrete a viscid matter which attracts insects. But there are other bristles (harpoon-like), that though they present no obstacle to the introduction of the fly's proboscis, prevent its being withdrawn. The fly, in distress, passes round and round until he twists his head off. Professor Gray requests those who have good opportunities of obtaining Mentzelia ornata, or its more common relative M. nuda, to investigate the matter and ascertain whether this charge of cruel behavior is well founded.

WE are glad to see quite a large number of papers, agricultural and political, now supporting the views we expressed a year ago, with regard to the necessity of the Government's appointment of skilled veterinarian inspectors of live stock, not only at the ports of shipment to foreign countries, but also in each district in which contagious diseases of a dangerous nature are known to prevail. Some advocate one method by which such provision should be made: some, another; but having no private axe to grind, looking solely to the interests of agriculture, we care little by what agency the needed measure is effected, or under what department of Government it may act. The only care we have is, that a provision so beneficial to our vast live stock interests should be made at the earliest moment.

OUR correspondent, Mr. James Taplin, tells us that as an insecticide he has found nothing better than acetic ether. This will destroy all sorts of greenhouse insects, while it does not harm the most delicate plants, probably on account of its exceedingly volatile nature. The mealy bug, that disgusting pest of house-plants, is killed instantly by acetic ether, while several applications of alcohol often fail. It may be supposed, also, that it would kill the scale insects. It is at least worthy of trial. Mr. Taplin says that lime, with enough glue to make it somewhat adhesive, is the best wash he has ever tried for scale upon fruit-trees. It should, according to his experience, be applied thick, for the reason that the insects beneath the scales are killed by being smothered. He disapproves of oil for this purpose, as it sometimes kills and often injures the parts to which it is applied.

"WHEN people are determined to quarrel, a straw will furnish the occasion," is an old-time adage as true of fault-finding as of the quarreling to which it often leads. The other day a lady down in Florida had the satisfaction of using some home-grown coffee, the product of the first coffee-berries that had ever ripened in the open air in this country. Straightway, upon this text, some of our "irreconcilable" journalists indulge in would-be-humorous gibes at the Department of Agriculture in general and its present head in particular, one of them even insinuating that the Florida coffee-plant might have been grown and its berries ripened in the conservatory attached to the Department at Washington, and then surreptitiously transported to the Land of Flowers, for the purpose of adding to the *eclat* of Gen. Le Duc in his efforts to introduce other branches of agricultural industry into this country. Yes, truly, "when people are determined to quarrel, a straw will furnish the occasion."

WE learn from various sources that the culture of the Tea plant is promising in some parts of the South. Gen. Le Duc does not expect that home production, if successful ultimately, will make itself felt in the foreign commerce of this article for many years to come. Under favorable circumstances, the trees yield but few pickings the third year after planting, and not until the fifth year may we look for enough leaves from the 50,000 tea plants which the Department of Agriculture has sent out, to commence "in earnest the manufacture of tea for commercial purposes." In raising Tea plants, it is important to shade the young plants from the direct rays of the sun. When sown in greenhouses and covered with glass, this being slightly shaded, the seeds germinate in about four weeks and grow thriftily. In the open ground, however, the first growth will dry up as soon as exposed to the sun's rays, and it is, therefore, necessary to select shaded positions for seed-beds, or else cover the ground with straw or some other airy protection. The Tea plant seems to require plenty of moisture, though it will not endure wet, heavy land. For detailed information the reader is referred to our illustration from nature, upon our first page, and to the accompanying article.

THE National Association for the Prevention of Adulteration in Butter, held a meeting at the Butter and Cheese Exchange, in this city, last Friday. This Association was formed about two years ago, to resist the encroachments on the sale of genuine butter by the manufacturers of oleomargarine. As noted in these pages at the date of its passage, about two years ago, a law of this State provides that each package of grease butter must be distinctly marked with the word, oleomargarine, plainly stamped or written upon it, under penalty of a fine. Many of the packages of this stuff, however, found abundantly in every grocery-store in this city, are marked so imperfectly that often a magnifying glass would be needed to detect the stamp or writing. It is proposed by the Association to take prompt steps towards prosecuting every house selling adulterated butter or grease butter in a manner contrary to law, and to raise a fund of $5,000 to supply the wherewithal to prosecute the offenders. As to the merits or faults of oleomargarine, there is no need here to discuss them; but every honest man will agree in insisting that the article, whether good or bad, should be sold on its merits, and not, as is too often the case, be palmed off upon the ignorant or unwary as genuine dairy butter.

THE Cane Growers' Association held its annual meeting at St. Louis, on Thursday last. Our telegraphic reports give every encouragement to the expectation that we shall, ere long, be able to supply our home demand for sugar by manufacturing it all over the Northern States from the juice of some varieties of Sorghum. Mr. A. J. Russell, of Chrystal Lake, Ill., manager of the largest works in the country for the manufacture of sorghum sugar, turned out 45,000 pounds of splendid sugar the past season, from very inferior juice, obtained largely from unripe cane. His experience convinced him, as he said in an "Everywhere" in the RURAL four or five weeks ago, that with proper machinery and juice weighing 10 degrees Baumé, cane can be ground one day and the sugar from it be ready for market the next day, instead of, as frequently happens now, carrying stock six months before the sugar is ready for sale. Samples of juice, tested by Mr. G. W. Belcher, the Association's expert, polarized from 4.47 to 12.86. Polarization in Cuba rates 14 to 16, and some kinds of sorghum have polarized as high as 14½. The high prices of sugar the coming season, due in a great measure to the shortage in the beet sugar crop of Europe and to the fresh outbreak of civil war in Cuba, will doubtless have a favorable influence upon the development of this new agricultural industry.

AN INJURIOUS PRACTICE.

THE practice of eating snow and ice, so common among the school-children of the Northern States, is a fruitful cause of catarrh. It is common to see boys and girls devour a snow-ball as though it were an apple, or an icicle as eagerly as a bit of candy. The hard palate which forms the roof of the mouth also forms the floor of the nostrils, and is no thicker than pasteboard. The chilling effect of snow and ice brought freely in contact with this thin partition, the upper covering of which is a sensitive secreting membrane, made up almost wholly of fine blood-vessels and nerves, produces a congestion, often succeeded by chronic inflammation. As a consequence, these snow and ice-eating boys and girls almost always have "colds in the head" and running noses. This is the foundation and origin of one of the most disagreeable, persistent and incurable affections to which the people of the North are subject—nasal catarrh. Catarrh is said to lead to consumption. Whether this is so or not, the chilling of the nasal membranes, a part of whose function it is to warm the air in its passage to the lungs, cannot but injure those organs, particularly in people of a delicate constitution.

"BUD HYBRIDS."

IN the RURAL of November 22 we called attention to what seemed to us the absurdity of producing "hybrids" from uniting split buds or grafts. We solicited the opinion of one of our first pomologists (whose name we do not feel at liberty to print), and the following is his reply:—

"I have heard occasionally, for many years past, the assertion that the sweet-and-sour apple originated by placing two split buds together; but I never yet found the man who had performed the operation. I have often seen the sweet-and-sour apple, and have always regarded it as something like the ribbon-grass,—the sweet, or light-colored part, less developed in size and flavor. It is rather insipid than sweet. If it were possible to make the halved buds grow together, it is quite obvious what the result would be—one side of the tree would be one kind and the other the other kind.

"But is it possible to cut two buds exactly through the axis, and make each part unite and grow? I would almost as soon think of cutting two animals through the center and making a compound of them. In common grafting, all we have to do is to make a mass of vessels and cells adhere by advancing growth; but the vital point in a seed or bud is a different thing. It is quite possible to make two halved grafts adhere, for it would be nothing more than grafting the one to the other; but each half would remain as distinct from the other half, as the graft and stock are distinct in common grafting. It might be that, in an extreme case, one half might modify temporarily the other, just as the stock, in rare instances, modifies the character of the graft; but the opinion that a hybrid could be thus produced, is contrary to all analogy and fact. In the millions of trees grafted and budded in nurseries, such a change was never effected."

THE TOMATO OF THE FUTURE.

OUR "Everywhere" reports furnish very trustworthy evidence that the Acme is, at the present time, the best tomato in cultivation. Its shape, evenness and solidity are its main merits. As compared with the Trophy, which, notwithstanding the scores of varieties that have of late years been introduced, still holds the second place, the Acme has the advantage of uniformity of size, freedom from deep seams, and of ripening fully about the stem. It ripens earlier also. The Trophy has the advantage, from a *market* point of view, of being larger and far more prolific. Size, however, in tomatoes, as in potatoes, as well as in apples, pears, etc., is a characteristic we shall value less as people learn that large size and excellent quality rarely go together. Taking the Acme as perfect in size and form, we want a variety that shall be as prolific as the Trophy, and possessed of such keeping qualities that we can send it to England and have ten days to sell it in her markets before it begins to soften or decay. Is this impracticable? Isn't the tomato susceptible of so great a change? The fact is, that this grand fruit grows with us so freely—with so little care of any kind; it sells in our markets for a price so feebly remunerative to the producer, that few have set about to improve it in a way that was likely to produce any good results. Many, it is true, have selected seeds from year to year; but only with a view to precipitate an early maturity, the last thing to be thought of, if real improvement is to be aimed at. Our earliest sorts are our poorest. We may, perhaps, obtain them still earlier; but, except in name and appearance, we shall find ourselves further than ever from those qualities for which the tomato is most esteemed.

In the improvement of the tomato, we want our horticulturists to make discriminate and systematic experiments, the same as have been made in other fruits, and we are glad to know that our suggestions for the past year or so in this direction, have been followed by some of our readers. In due time, we hope to make it appear that we have ourselves, the while, been practicing our own teachings, and that if we do not actually succeed in producing the tomato that can be shipped to and sold in England, we shall be able to present one that, while it equals the Acme in general excellence, shall prove a long way ahead of it in *keeping* qualities.

THE Gardener's Monthly is never timid about speaking its mind. We value, accordingly, the following little compliment from its accomplished editor, in the current number of that journal:

"THE RURAL NEW-YORKER, as it is now, will compare favorably with any agricultural serial issued, to say the least of it."

BREVITIES.

"NAGGING" at our hired help discourages the honest worker.

TURN over the earth in the hen-yards. It will purify it and set the poultry to scratching.

ONE of the fears entertained in England is a *permanent* depreciation of all farm property.

THE plan adopted by our City Horticultural Society of awarding money premiums and then accepting them from the prize-taking competitors to pay the expenses of the Society is—novel, to say the least of it.

THE Report of the Commissioner of Agriculture for 1878, just received, is one of the most interesting and instructive documents of the kind we have seen. We shall make several references to it in the future.

DR. Warder and Mr. M. B. Bateham were appointed by the Governor of Ohio to represent that state at the (Reall) National Convention to be held in this city the 10th inst. But the thirteenth annual meeting of the Ohio S. H. S., of which the first named gentleman is President and the second Secretary, will be held in Canton, the 10th, 11th and 12th inst. Hence they were constrained to stay at home.

AN American writer states, in the London Agricultural Gazette, that there are no farmers in the world who manifest such indifference to modern discoveries and new systems as those in the United States, and that, relying chiefly on the labor they do themselves and can drag out of hired men, they nearly all abhor scientific or "book-farming."—It seems to us that there are, in the three distinct assertions in the above paragraph, at least three distinct errors.

PRESIDENT HAYES says it is a sound policy that has brought about good times. This in a letter to a friend meant for the public. In the numerous addresses he has made during the past season at agricultural fairs all over the country, we have a distinct recollection that he constantly attributed the return of good times mainly to the results of the agricultural labors of our farmers. But, after all, he *may* mean good farming by the phrase, "sound policy," although it looks mightily as if he referred to John Sherman's financial operations.

LAST Thursday Mr. Atkins, of Tennessee, introduced a bill into the House of Representatives giving the Commissioner of Agriculture a seat in the Cabinet. The measure is to be voted upon to-day. We hardly expect better success for this salutary proposition now than it met with when made during the last session of Congress. Reforms are made slowly by the Anglo-Saxon race, especially when they take the shape of an innovation on an established system and when there is no strong pressure of public opinion in their favor. The farmers of the country do not yet seem fully awake to the importance of having a representative among the chief executive officers of the nation, any more than they are yet fully alive to many other rights which their number and standing entitle them to. The day, however, is not far distant when the agriculture of this country—incomparably the most important interest in it—will be duly represented in every department of the government.

For Women.

CONDUCTED BY MISS FAITH RIPLEY.

THE GREAT SPIDER.'

DEDICATED TO SALOON KEEPERS.

A SPIDER sat in his basement den,
Weaving his snares for the souls of men.
"I will not work with my hands," quoth he;
"An easier pathway must open for me."
He spreads his tables of greenest baize,
And many a cunning trap he lays.
The marble halls are smooth and white,
The den is blazing with floods of light.
Behind the bar the spider stands;
There is not a wise man in the land
But will lose his wit and and become a fool
If he yields himself to the spider's rule.
There is not a man so strong and brave
But the spider will dig him a shameful grave.
There is not a youth so noble and fair
But will learn to drink, and gamble and swear
In the spider's den. But do not, pray,
Dare to dispute the spider's sway;
If you sweep the den with the law's strong broom,
Perhaps you might make a cleaner room;
But then men are fearful—a little afraid,
In fact—on the spiders to make a raid;
'Twould stir up excitement, and spiders must live;
So our dear household treasures we patiently give.
The spider still sits in his basement den,
Lying in wait for the souls of men.

[*Mrs. E. J. Richmond.*

What! rob a poor man of his beer,
And give him good victuals instead?—
Your heart's very hard, sir, I fear,
Or else you are soft in the head.

What! rob a poor man of his mug,
And give him a house of his own:
With kitchen and parlor so snug?—
'Tis enough to draw tears from a stone.

What! rob a poor man of his glass,
And teach him to read and to write?
What! save him from being an ass?
'Tis nothing but malice and spite.

What! rob a poor man of his ale,
And prevent him from beating his wife,
From being locked up in a jail,
With penal employment for life?

What! rob a poor man of his beer,
And keep him from starving his child?
It makes one feel awful queer,
And I'll thank you to draw it more mild.

[*John B. Gough*

LETTERS FROM A COUNTRY GIRL.—No. 19.

MARGARET B. HARVEY.

A French Talk.

WHERE is that little girl (or big one), who is generally to be found in every obscure corner of the country, who "wants to learn French," but whom almost everybody delights in telling that she "can't do it without a master," "short methods are humbugs," "it won't do any good," and "it's all a waste of time?" Well, mademoiselle, I was that girl once. *Then*, I had a remote suspicion that, after all, I might know my own business best; *now*, I know I do.

For my part, I say that the acquisition of any knowledge, even under the most favorable circumstances, is impossible, without plenty of will; and under the greatest of discouragements, it is easy *with* that same amount of will. You know about Elihu Burritt and Grace Anna Lewis, so I need not tell you what they did.

Those people who tell you that you can't learn a language are either very pedantic, or very ignorant. Don't mind the first, and prove to the second how much mistaken they are. So far from its being very difficult to learn a foreign language, you will be astonished, when once you have fairly entered upon the pursuit, to find how many, many little helps there are, all along the way. And when you have learned one, you have already accomplished more than half of another.

The reason of all this is plain. Modern European languages are only modifications of three or four ancient tongues, notably Celtic, Gothic, Latin and Greek, which themselves were direct outgrowths of one still more ancient mode of speech prevalent in India, which to-day is known as Sanscrit. All subordinate dialects, whether ancient or modern, may be traced to this classic Hindoo language, so far as is yet known. I do not mean to go into comparative philology,—I may be touching upon important side questions which I am incompetent to answer,—but I do want to indicate this fact, that however much modern languages may vary externally, there is a similar principle running through them all.

But they don't differ so very much, either. Almost any word in English, which is not unmistakably Saxon, you will be likely to find very little altered, in French and Latin,—in many cases, the spelling is identical. You will be surprised to discover how often this is the case.

To take up a language as a study, be sure first that you are thoroughly grounded in English grammar. Unless you know the structure of your own vernacular, I cannot imagine how you can make any progress in another tongue.—that is, if you expect to study without a teacher. The reason why students spend so many years over French, Latin and Greek, is because they have to begin at the beginning and learn the grammar,—if they take up a foreign language early, the supposition is that they don't yet know their own. But when I say, learn grammar, I don't mean, wade through a two-inch volume of controversies,—a little abstract, such as Hart's smaller book, will be more than you need. It gives the essentials of the language, and if you find yourself in doubt over some technicality, you can refer to the authority, Goold Brown's Grammar of Grammars, in the public library.

We will suppose that you "know your grammar." Then you have won half the battle, for the grammar of other languages (French and Latin at least), is substantially the same. The slight differences are no more than you can see and comprehend for yourself. But I will briefly point out a few of the most important in the two languages above mentioned, for I am not familiar with any others.

You will probably notice first of all, the great amount of transposition in both, notably in the latter. In French, the adjective frequently follows the noun; as, *bas bleu*, blue stocking. The object of a verb, when that object is a pronoun, is usually placed before the verb, directly after the nominative; as, *Je vous aime*, I love (or like) you. Akin to this last construction, we have the reflective verb, similar to the passive voice (though there is a passive voice, also, in French.) in which the agent acts upon himself, this being specified by two pronouns placed before the verb, one of which is nominative, the other, objective. What in English would be an intransitive verb, will most likely be reflective in French. For instance, we would say, *I walk;* a Frenchman would say literally, *I walk myself*, (*Je me promene.*)

Some constructions incorrect, though common enough, in English, are perfectly proper in French. Especially is this the case with the double negative, which occurs everywhere in the latter language. We could not say *this here* and *that there*, but the French can and do. *It is me, it is her, it is him*, are shocking in English, but all right in French. Further than these, there are no very striking idioms, other than that there is no neuter gender, everything, even inanimate objects, being masculine or feminine. Out of this fact grow a few important considerations. A word in the feminine gender is usually denoted by the termination *e;* adjectives, articles and possessive pronouns—in short words qualifying nouns—have their gender, as also their number, to correspond with the nouns to which they belong. It will not do to say, *Un beau table*, however pretty the table may be; the noun *table* is in the feminine gender, consequently the adjective and article must be also. *Une belle table* is correct; so, if I mean a particular one, *La belle table*, (not *le; la* and *le* both mean *the.*) If the table is mine, I cannot say *mon table*, for *mon* is masculine. Nor, were it "thine" could I say *ton table*. I must have it; *ma table* or *ta table*. If it belonged to you and me in partnership, *notre table;* to you and some one else, *votre table*. Were there more than one, I could speak of them as *mes tables, les tables, nos tables*, or *vos tables*, as I could whether the noun happened to be masculine or feminine, the possessive plural being the same for both *mon* and *ma, ton* and *ta*, while *notre* and *votre* are already singular as to the object possessed, plural as to the possessors, *nos* and *vos* plural as regards both possessors and possessed.

In Latin, you may especially remark the absence of the articles, *a* and *the;* the abundance and frequent recurrence of emphatic words; and the excessive use of the participle.

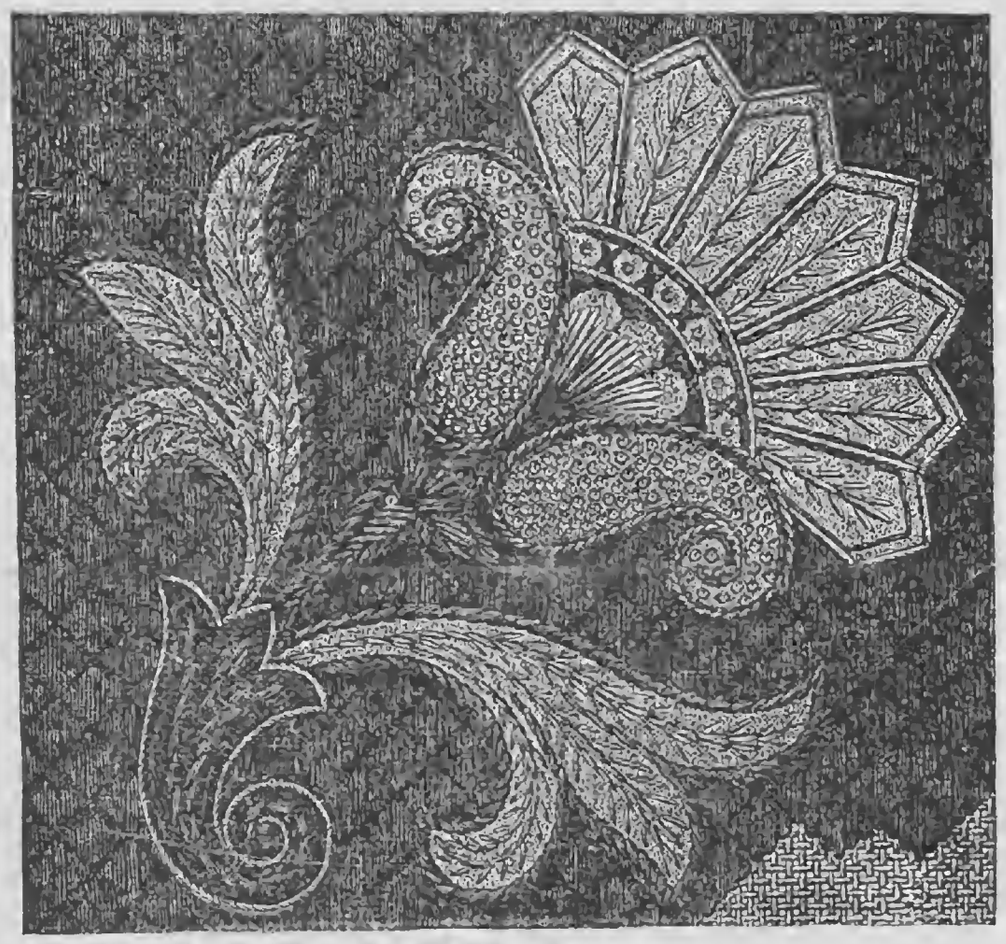
DIFFICULTY OF A NEW LANGUAGE.

The real difficulty in learning a new language is to master the declensions or variations of the form of words. In French, these are found only in the verbs, which though professing to have but four modes of conjugation, have, in fact, so many irregularities as to amount to over eighty. Don't believe anybody who tells you that the English language is the most difficult to learn. The spelling may be hard, but the verbs are nothing—French verbs are barbarous. In Latin, though far less capricious seemingly, the verbs are almost as formidable; and added to which is the stubborn fact that the nouns, adjectives and pronouns also change their form to express gender, number, person and case to agree with other words in a sentence. There is no necessity, however, for you to learn all the declensions at once. If you attempt it, you will probably discover nothing more than what a dry study you have taken up. Don't be startled if I tell you to begin right away and translate.

"Translate!" you exclaim, "How can I if I don't understand the language?" Well, let me undeceive you a little. Contrary to general belief, translation is the easiest part of acquiring a language. Anybody can translate, but not everybody—not a great many, in fact—can so master a tongue as to write it, speak it, think it, as though it were their own. But if he could at last, he would most likely have to translate at first.

He couldn't, though, and you couldn't, take up Victor Hugo's incomparable work Les Miserables, and write it out in an elegant form worthy to be given to the world. *That* kind of translation must ever be reserved for master minds. The kind you undertake must be so far from ambitious as scarcely to escape from the privacy of your own room.

It matters not what language you start to learn, the mode of procedure will be the same. Latin, it seems to me is especially valuable not as an accomplishment, but as the foundation of an education, because English, French, Spanish and Italian are largely derived from it, and because its terms enter into every department of Science, Medicine, Botany, Mathematics and what not. French is also valuable because, next to the English, it is most widely spoken; because of its priceless scientific literature, notably on Chemistry and Physics, and because it is a new, vigorous, growing tongue, not confined like many others within a limited area. By the way the French are not the light, frivolous creatures they are often supposed to be. No nation in the world can boast brighter names among its philosphers and novelists and poets. Witness those of Ganot, Lavoisier, Victor Hugo, Madame de Stael and Fenelon. I know nothing of German, other than what I have gleaned through translations, but surely, Schiller, Goethe, Jean Paul and Herder are worthy to be read in the originals. Italy and Spain offer to us Dante and Petrarch, Cervantes and Lope de Vega. Italy and Germany, however, speak to us in a diviner language, the universal one of music.



DESIGN IN APPLIQUE AND EMBROIDERY.

Spanish, I am told, is exceedingly easy—so easy that any one could learn it in six months, or, with a moderate knowledge of French as a foundation in three. Italian, also, is far from difficult, closely resembling French and Latin.

HOW TO BEGIN.

Provide yourself first with a good though inexpensive dictionary—Fleming and Tibbin's for French, Ainsworth's for Latin, some friends can probably inform you whose for other languages. Tables of all the verbs are given in the front of the French dictionary, while for the Latin paradigms you can procure a little work containing them, from any great publishing house, for twenty-five cents. Don't, as yet, bother with grammars. For translation, procure a copy of some work *with which you are already familiar*, so that in case of doubt you can easily refer to your English version. For several reasons probably the best book for this purpose is the New Testament. First, its cheapness, you can buy a Testament in French for twenty-five cents, one in Latin for fifty; second, your pre-supposed familiarity with it; third, its correct diction and its pre-eminent place among the classics of all civilized languages; fourth, it will indirectly aid your faith and Christian knowledge.

Armed now with Testament, dictionary and pen and ink begin to work. Hunt out every word, and write out a *literal* translation, it will be time enough to render it into correct English when you know more. Grapple with every difficulty boldly, pausing when you come to a different form of a word long enough to learn it, and don't refer to your English Testament except as a last resort. Persevere in this, even if you don't write more than a quarter of a chapter a day, it won't be many months before you can easily finish several at a time. When you see exactly what the declensions *are for*, why *then*, learn them verbatim.

Of course, there is to be no play about all this. Such a pursuit may be carried over several years, the time being lengthened or shortened, according to your perseverance. But within a year you ought to know your French Testament well enough to read it without assistance, and six months later to comprehend any extended work in that language, while at the end of two years, you should read almost anything—that is, enough to know that you are very near the goal. If you have no other pursuits on hand, I don't see what need prevent your accomplishing it all in about six months.

PRONUNCIATION.

French, I believe, is almost the only language in which speaking materially differs from writing. The tongue, as it were, lightly skips from word to word, seizing each by the beginning and jumping from it ere reaching the end. It is said that a true French pronunciation cannot be attained without a native teacher. Perhaps not—but certainly something better than the mongrel American style can. Try and remember the following principles:

1. The French *never* pronounce the final consonant of a word (except that consonant be *c, f, l,* and *r*), unless the next word begins with a vowel, in which case the final consonant is joined to that next word. Thus, *Je vous aime*, is pronounced, *Zhe vou saime*, *s* sounded like *z*, *vou*, like *vou*, and the *e* in *je* like *e* in *hen*.

2. *N* at the end of a word is not precisely dropped, but sounded somewhat like *ng* in *song*. *N* generally, is one of the indistinguishable nasal sounds.

3. The combinations *in, ain, ein*, are pronounced like *an* in *can*, while *im* and *aim*, are sounded as *am* in *lamb*. The *n* and *m* sounds, however, are more nearly alike than in English, both being nasal. Never say *mering*,—say *merang*,—for *meringue*.

4. *En* and *em* are pronounced *ong*. Thus, the word *temps* sounds almost exactly as though spelled *tong*.

5. *E* alone is nearly like our long *a*, as in *day; i*, like *e* in *me*.

6. *Gn* has the sound of *ny*. We have a word anglicized which contains this combination, *mignonette*, whose correct pronunciation is *min-yo-nette*.

7. *Ll* is as much like *ye*, in yes, as I can write it—sounded very lightly, however. Thus, in *merveille*, pronounced *mer-vi-ye*, the *ye* is little more than a lengthening of the preceding *i*.

8. *Oi* is like *wa* in *wall*.

9. *A* alone is either like *a* in *ah* or in *at*.

10. *On* is nearly like *one* in *lone*, except that the *g* sound is slightly apparent.

11. *Au* is like *o* in *hope*.

12. In *re* and *le* the consonant sound is so shortly pronounced as scarcely to touch upon the *e*, as in *centre* and *peuple*, pronounced *sontr* and *pupl*.

13. *Eu* is the hardest sound for an American to make. He either gets it like *u* in *under*, or *ur* in *burr*. But we have the exact sound in English—it is like the *e* in *her*, the *i* in *fir* and the *o* in *work*. Give the vowel in each, clipping off the *r*, and you have it, little wave and all.

14. Generally, when two vowels are combined, the combination is sounded like the last simply. For instance, *ai* and *ei* are pronounced like *i*, as in *life*.

15. The final *s* in a plural is not sounded, nor is the previous consonant, which would not be if alone. The *s*, however, is carried over to the next word, if beginning with a vowel.

16. The various terminations of a verb, except *ons* and *ont*, both pronounced *ong*, are not sounded.

17. The French do *not* accent any syllables; every syllable has exactly the same value as every other. Accents in French have nothing to do with emphasis.

18. The principal exceptions to these rules are in the words *et* and *fils*. The *t* in *et* is never pronounced, while *fils* is read as though written *fiss*.

Make it a point always to read your lesson over aloud, and by this means you will soon become familiar with the spoken as well as the written language.

I don't say all this will teach you to converse, for it won't. To do so requires a fluency of thought, a thorough acquaintance with the idioms, so as to have them at your tongue's end, and, above all, confidence in yourself and constant practice. For all this you want a teacher; but until you are ready, I repeat, to begin actually and converse, you don't need any instruction at all, other than you can, by steady application, give yourself. If you can afford to spend only a small sum upon language lessons, save it for the last, the finishing; there is no earthly use in giving any man or woman a dollar, or even fifty cents an hour, to hear you define a word or repeat a conjugation, unless you are one of those unfortunate individuals who cannot learn anything alone. If you can't lay out any money at all, why you need not be discouraged, nor will your labor be lost if you succeed in reading the choice works in foreign literature, even if you never open your lips save in your mother tongue.

DESIGN IN APPLIQUE AND EMBROIDERY.

THIS design placed at equal spaces on the canvas, is suitable for chair-seats, cushions, stools etc. The applique may be of cloth or velvet. The foundation is canvas, and the grounding is a diaper pattern of wool. The outline of the leaves is in cording stitch, with coarse silk; the colors may be selected according to taste

FEMININITIES IN BRIEF.

Martha Washington handkerchiefs in black net with jetted frills are stylish.

Beetles and bugs in natural tints have taken the place of the reptiles popular last winter in adding the finishing touches to bonnets and hats.

Silk handkerchiefs are favorites for neck-wear. They are manufactured in rich, dark and brilliant colors, both plain and figured, the designs being noticeable for their oddity and variety.

For evening entertainments, matrons who wish to wear dark colors will choose a costume of all black or garnet, as much handsomer by gaslight than deep gray, blue, brown, green or any of the similar shades.

For your piano cloth fashion demands that it shall be white or cream-colored velvet, hand-painted in water-colors, or wrought with the finest silk *broiderie* in wreaths of holly, in fronds of fern or in garlands of violets and smilax.

Literary Miscellany.

THE PASTOR'S RESIGNATION.

BY I. EDGAR JONES.

THE aged pastor bowed his head within the altar's railing;
His hands were tremulous with age, his sight and hearing failing;
Fond faith and trust were striving hard to fight away his fears,
But yet his heart was sore and sad and sought relief in tears.

For forty years his tongue proclaimed to all salvation's story.
For forty years to all who came he offered hope of glory.
For forty years the bell that echoed now from out the cupola
Proclaimed that here his warning voice had tidings for his people.

But now the leaders of the church—an influential clan,
Had called on him to yield his place to hold a younger man;
His energies had long been spent, 'twas meet he should retire
That they might call a man of mark endowed with youthful fire.

With quavering voice he gave response to friends who offered greeting,
And listened in an absent way to members in the meeting—
Discoursing in familiar tones of changes they were making—
And asking him to make remarks, although his heart was breaking.

But yet he spoke—as oft before—his voice aglow with feeling,
While down his faded, furrowed face slow tears were softly stealing,
A holy hush pervading all, as though an angel spell
Had rested on them, as he rose to bid his flock farewell.

He spoke of memories sad and sweet, of dim and distant days,
Of forty years of constant toil, of pain and prayer and praise—
Of children—christened by his hand who stood before him still,
While some reposed beneath the flowers upon the distant hill.

And here his voice sank sad and low—for there his child and wife
Were laid when death had left him lone to live his laboring life—
Far more were they he once had known, who 'neath the willows slept,
Than they who sat before him now, and o'er their memories wept.

For all he prayed as fathers plead for children whom they love,
That all might once again be joined in God's abode above;
And then, in voice replete with tones of love and fond caressing,
He raised his trembling hands aloft and gave to all his blessing.

The saddened people silent sat as he resumed his chair,
While rays of sunshine softly fell and played upon his hair,
And rested there with light caress, as though a golden chain,
By which an angel message sought and soothed him in his pain.

The organ broke the silence then with sweetly solemn roll,
That wailed in waves of silver song across the saddened soul,
With "Rock of Ages," old, yet new—majestic, grand, and strong—
Well may the angel choir above, its quivering notes prolong.

The people rose to be dismissed; their pastor lingered still,
And smiling looked upon the graves that crowned the distant hill;
But when they sought with gentle touch to wake the musing mind,
They found that death had called him hence; *their pastor had resigned.*

IN FOLLY'S NET.

CHAPTER XXIII.

TAKEN.

JEAN was alone; she was sitting in a little quaint octagon room, which had always been a favorite resort during her unhappy residence at Blair Gates. It was hung with crimson, scented with flowers, winter though it was, and on the hearth burned a warm, glowing fire of logs, which threw a ruddy warmth over the room, with its rich-hued coloring and rich furniture.

She was leaning back in a deeply-cushioned armchair, her beautiful head resting against its crimson cushions, her hands clasped in her lap in idleness, her lids half closed over the dreamy, musing eyes, which looked into the red glare of the fire. She was dressed in black—all the heavy outward signs of mourning were upon her; the long cashmere, with its crape coverings, swept the ground around her feet; but her face was not sad. It was grave, certainly — very grave and still; but the lips were parted in the faintest little smile, as if they held some happy secret, and a faint rose-color had crept on in the pallor of the soft cheek which had been pale so long.

For some time she had been sitting thus idly, doing nothing, for the languor of her recent indisposition was on her yet, and she was but weak and feeble still. No noise nor confusion reached her in her little far-off room, shut in so cosily; no suspicion of the trouble about to overwhelm her in her calm security; she had no *soupcon* of the terrible gulf on whose brink she stood; she had forgotten even the suffering of the past few weeks in the day-dream which she was dreaming in the firelight.

The door opened softly, and Jean lifted her eyes; but the person who stood there chimed in so aptly with her waking dream, that his presence gave her no surprise. The handsome, fair face had been so vividly before her as she dreamed, that now, as he stood there a living presence, she felt no astonishment, no wonder—perhaps she hardly realized that he was there really, as her eyes dwelt upon him with unutterable tenderness, and her lips parted in a soft, welcoming smile.

"Archie," she said, softly, in a voice of music, so low, so hushed that the words barely stirred the air, "is it you?"

He came forward hastily, before she could move, and sank on his knees beside her, putting his arms round her as she sat, and drooping his head until it rested on her knees, mute in his awful sorrow, unable to tell her why he was there, knowing that his words would break her heart.

For a few minutes they were silent; the Earl's head sunk on her knees; his breath coming with suffocated gasps; his hands unsteady and trembling. Jean was the first to break it.

"Something has happened," she said, and her voice, faint though it was in her terror, did not falter. "What is it?"

A long shudder ran through Lord Ivor's strong frame, a shudder such as shakes a man's limbs under some terrible bodily torture, but he did not speak.

"Tell me all," pleaded the low, sweet voice, steady, unfaltering still. "You are safe—you are well; it cannot be anything so dreadful, that I cannot bear it—I have borne so much."

"Poor child!" he said in unutterable tenderness, lifting his head and looking at her with the weary pain in his eyes, the contraction of a great torture in the quivering lines of his face.

"Dear," she said, softly again, with her tender hand lying lightly on his shoulder—"if you can, tell me—"I can bear anything, but this suspense."

Anything!—could her wildest dreams have told her the awful reality!

Listening to her soft, sweet tones, meeting the sad tenderness in the lovely, wistful eyes, a deadly pallor came over the Earl's face; his lips grew white; his heart almost ceased to beat!

"Archie!" she said, tenderly, "you are ill!"

His head sank forward on her shoulder for a moment in unconquerable weakness, and he strained her to his breast with a close, convulsive clasp. In silence she submitted, waiting until he was stronger—able to tell her.

At last he rose from his knees and loosed his arms from around her, looking down at her the while in tenderest compassion, then a great sob burst from him.

"Oh! my darling, how can I tell you!" he said, piteously, all his manhood deserting him now, his heart wrung with anguish, his limbs trembling and nerveless.

She looked up with wondering, wistful eyes.

"What is it, dear?" she repeated, gently. "How your hands burn! How you suffer!"

She rose from her seat and went to him; she forgot in her anxiety that the sod was freshly turned on her husband's grave—she only knew that the man she loved was with her in some new fearful grief; she saw that he suffered as no physical anguish could make him suffer; that his limbs were weak—his eyes dim with an agony which no bodily pangs could wring from him. She put her arms round him, she lifted her fair, pale face to his, and her eyes questioned his mutely—but earnestly.

"Jean," he said, in the faint voice of a man weak from long illness or bodily infirmity, "it would be easier to die than to tell you."

"Say on dear," she murmured, "it may be easier when I bear it with you. Tell me all."

For all answer he pressed her to his heart, and kissed her many times, with a fierce, passionate despair in each caress, the fever of his lips burning hers like fire—then in silence he released her again.

Suddenly there was the sound of steps upon the stairs; he turned from her, and crossing to the door with a hurried step, he locked it, coming back to her again, hardly daring to look at the questioning eyes with which she watched him.

"Great Heaven!" he said, clasping her hands in his with unconscious passion; "how can I tell her! How can I tell her!"

He sank down on a couch and drew her down to his side—she let her hands lie passive in his and watched him anxiously; her love for him was strong—so strong, that it excluded all thought of self, but she knew that, for suffering to touch him so keenly, it must touch him through her.

"Dear," he said, in a moment, huskily, "you know how dear you are to me—how infinitely precious you are—you know that I would cut off my right hand to save you a pang."

"Yes, I know," she said, softly.

"Then you will know what it costs me to come to you to-day."

"I can see how you suffer, Archie," she said, tenderly, sweeping back the hair from his brow with a pitying, compassionate caress.

"Oh, if I could keep it from you!" he said, brokenly. "I came to save you pain, Jean, and I am doubling yours. Oh! love—love, listen—they are coming for you."

"Coming for me!" she repeated, her eyes seeking his with an undefined dread. "Who?"

"Don't look at me so, my darling! Your pure eyes break my heart. Oh! the fools, the madmen to doubt you!"

She half rose; some dim revelation of the truth was coming to her, but he drew her back into the shelter of his arms.

"To doubt me?" she repeated slowly.

"Oh, child, if I could keep you always," he groaned. "My darling you will not be afraid; they cannot prove their vile suspicions. Jeanie, don't look thus, love; you are breaking my heart."

"Their vile suspicions," she said. "They are coming for me. Do they think—Archie, they cannot—do they think I did it?"

"They cannot prove it, sweetheart," said the Earl, brokenly, as in a sudden access of terror, she clung to him with convulsive strength. "They cannot prove it, my poor, wronged darling. Heaven give you strength to bear it! It cannot be for long. All will be cleared up soon."

"You will not let them take me!" she entreated, clinging to him with her tiny hands. "Archie, you will not let them take me!"

"Oh! darling, if I could —" he stopped, choked with the great sob which rose in his throat

"You will hold me very tight?" she said, in strong, feverish excitement; "you will keep me from them, Archie, dear, if you love me—you will hold me fast from them!"

"If I love you! If I love you!" he repeated in anguish, and a great passion of sobs broke from him in his agony. Powerless to help her—powerless when his love was so great.

At the sight of his anguish she calmed her own, and unclasped her clinging arms.

"Forgive me," she said, gently, "I did not mean to hurt you, Archie. I know that, if you could, you would keep the trouble from me. Dear," she went on, tenderly, lifting his bowed head from his hands, and looking into the gray eyes she loved so well, "do not grieve so terribly. They cannot hurt me, you know."

She was stronger now—he who should have strengthened her was encouraged by her brave words, her unselfish devotion.

A knock came to the door—a hasty knock, and Collin's voice:

'Oh! my lord, they are coming—they are here!"

Jean rose, and went to the door, as if to unlock it, but he drew her back.

"Not yet—one moment yet," he said, brokenly. "My dearest, they shall not! oh! great Heaven, this is unbearable!"

He held her close then, strained to his breast; she could feel the uneven panting of his heart against her shoulder; the hot tears fell from his eyes on her upturned face.

"Archie, you hurt me," she said, piteously.

"Oh! Heaven!" was all he said, holding her close.

It was a terrible thought. At the door they were waiting to take her—his darling—to a felon's cell!

Strangely enough—and yet not strangely, perhaps—she had never thought it necessary to assert her innocence to him. True, he had never doubted her, even in his thoughts, for a moment. And measuring his love and trust by her own, she had not doubted him.

"Archie," she said in a moment, speaking the words she had spoken to him once before, "let me go—they are coming for me!"

But he only tightened his clasp, and as the sound of another hasty, imperative knock came to the door, he bent his head and rained kisses and tears on the beautiful, still face near his shoulder.

"Archie" she whispered, faintly, "Archie, help me!"

The two simple words recalled him to himself; he released her and stood erect, dashing the tears from his eyes; then crossing over he opened the door. Two or three men stood without, and Collins was shrinking back in the shadow of a dark velvet curtain which shaded the entrance.

"Collins," said the Earl, calmly, "bring your mistress her cloak."

It was there ready, and with trembling hands the maid wrapped the rich, dark furs around her, and stooping when she had completed her task, she kissed the little cold hands.

"Thank you, Collins," she said, gently, and taking the Earl's arm, she went quietly down stairs, through the group of weeping maid-servants and staring men, to the carriage which waited.

And so they took her from him to the prison cell.

CHAPTER XXIV.

BEFORE THE TRIAL.

SIR David Cairnes sat in his study—a handsomely furnished but essentially business-like room—in his house in Edinburgh. He was seated before his writing-table, glancing over his correspondence, sorting papers in an alert, orderly manner, with his clear, steel-blue eyes still undimmed and keen, although he had seen nigh sixty winters pass over his head. It was yet early in the day, for the clock on the mantel-piece pointed to eleven; Sir David had given orders that he should never be disturbed by visitors before noon, but it wanted almost an hour to that time when his butler entered with a card.

"His lordship begs you will receive him, Sir David," he said, respectfully. "His business is urgent."

Glancing at the card, Sir David read the name and a slight expression of pity crossed his face.

"Ask his lordship to be good enough to come to me here," he said, quietly; and as the man left the room, he went on with his letters until the door opened again, and the servant announced:

"The Earl of Ivor"

Sir David rose, and held out his hand to the young nobleman as he entered, and one glance at his face showed that he was haggard and weary, and travel-worn. His proud gray eyes had dark shadows under them, and his face was very pale.

Neither spoke until the servant had closed the door; then Lord Ivor said hurriedly:

"I ought to apologize for troubling you so early, Sir David, but my business is urgent."

"No apology is needed," said Sir David, cordially. "Whatever chance brings your father's son is a fortunate one for me."

"You are very good, Sir David," said the Earl, wearily. "My business—you can guess it, can you not?"

"Partly," said the lawyer, cautiously.

"You have heard?" Lord Ivor said, eagerly.

"Yes, I have heard," Sir David answered, quietly.

"And you will help her—you will help us?" said the Earl, in the same eager tone.

Sir David hesitated a moment.

"Do you wish me to undertake the defence, Lord Ivor?" he said, lifting his eyes suddenly.

"Yes."

There was a short silence.

"You will not refuse us?" the Earl said, then.

"I am afraid that what I am going to say will pain you," was the answer, gently spoken. "You wish me to prove the innocence of a person whom I may—I do not say I do—think guilty."

"Guilty!" repeated the Earl. "Guilty!—Jean!"

"Listen to me, my lord," said the lawyer. "I think the lady in question had a strong hatred to her husband; I think she was almost desperate, and I think that she is a woman of deep feeling, likely to commit any——"

"Hush!" said the Earl, haughtily. "You know little of her, Sir David, and you judge harshly."

"I judge as the world will judge," he answered, rather sadly.

"Then I cannot count upon your friendship," said Lord Ivor, rising.

"Certainly you can," the advocate answered, instantly. "You may always count upon that, my lord. Are you returning to Glossin to-day?"

"Yes," said the Earl, his face brightening a little.

"Then I will return with you. Excuse me while I make some necessary arrangements."

An hour afterwards the Earl and Sir David were dashing towards Glossin as fast as the express train could carry them, arriving there at dusk that afternoon, and going straight to the prison, within whose frowning walls Jean Blair was imprisoned.

The arrest of Mrs. Blair on the accusation of the murder of her husband had caused the greatest excitement in the county. At first people were astonished and incredulous; they would not believe it possible; then, when it was impossible to doubt any longer, they were loud in their condemnation. It seemed to many of the great people with whom Jean had mixed for so long that they themselves were personally insulted by her suspected guilt. Some whispered among themselves that she might be guilty; others threw back the accusation with scorn. They knew she was in prison; that was sufficient proof for some to think her guilty. She would never have been arrested had there not been strong proof of guilt. They thought and began to wonder already what the verdict would be.

Mrs. Fergus Blair, the dead man's sister-in-law—a woman of an inferior rank of life to that held by her late husband—was very bitter against her beautiful sister-in-law. She had been exceedingly mortified at merely receiving a jointure, her husband having left the estates and fortune to his brother; now it was rumored that the late owner of Blair Gates had left the whole property to his wife, and Mrs. Fergus Blair may have thought it in her interest to have Jean declared a felon. It must be owned, however, that she believed firmly in her guilt. She knew little or nothing of Jean; she had seen her once or twice in society, and the girl's beauty, her haughty carriage and grace had aggravated the dislike she was prepared to feel for one who had so supplanted her.

"It is said they lived a cat-and-dog life," she whispered to her intimates. "And every one knows she loved Lord Ivor, and wanted to be a Countess, only poor Andrew had been so infatuated with her that he had inveigled her into a Scotch marriage. It is all very sad and very dreadful, but I hope she will suffer for her infamy."

Such was the charity with which Mrs. Fergus Blair regarded the unhappy girl. Happily for Jean, however, she had powerful friends, and she knew everything would be done, not only to ameliorate her position, but to provide her with efficient advocates.

Jean was alone in her cell when Sir David Cairnes was admitted; an open book lay before her, on which she was trying to fix her attention. She had promised Lord Ivor, who had obtained permission to visit her, that she would do her utmost to divert her thoughts from her terrible position, but it was a difficult matter. She was an ardent lover of poetry, but Tennyson's beautiful Idyls, open before her, might have been Greek lines for all the sense they conveyed to her bewildered brain.

She lifted her head sharply as Sir David entered, and a little flush stole into her cheeks. The old lawyer's bearing was perfectly courteous and respectful—a little cold, perhaps; and Jean had a vivid recollection of the circumstances under which they had last met. Insensibly, however, as the interview went on, Sir David's coldness melted, his tone became cordial, kind, almost parental; Jean's sweet, pure face and clear, sad eyes were telling their own tale. He had entered the prison with a strong suspicion of her guilt; he left her with as firm a conviction of her innocence.

"I can see but little proof against you," he said, gently, at length. "The housekeeper states she saw you leave the laboratory on the night before. I must ask you, and you must tell me freely, you know, my child, if I am to be of use to you, what you went there for?"

"Must I tell you?" she faltered, her long lashes drooping.

"If you please," he answered, firmly. Then he put out his hand, and laid it on her little cold fingers. "I am an old man, my child; you can trust me fully. There is little of the folly, the weakness, the wickedness of our humanity which I have not come in contact with. Let us hope my experience has taught me wider charity."

"I was very wretched!" Jean said, brokenly "so wretched, that for a moment I thought that it would be no sin to end my wretchedness *and my life.* I went to the laboratory to get——"

She paused, and the beautiful, shamed face sank until it touched his hand.

"I understand," he answered, gravely. "And you brought some poison from there?"

"Yes. I was sorely tempted, Sir David," she said, through her sobs; "but Heaven, in its mercy, kept me from harm that night. My pain—my pain and Archie's—was driving me mad; but I was spared that sin."

"What did you do with the poison?"

"I put it in my dressing-case, meaning to return it to its place; but the next day——"

Her voice failed her at the remembrance of the next day's misery.

Sir David's face grew very grave as he remembered that they must have found it there; but he was silent, smoothing with his hand the beautiful bowed head.

"Keep a good heart, my child," he said, at length. "The hour before dawn is the darkest hour, you know. I trust the day will break clear for you. You know we will do our best for you?"

"Yes," she said, forcing a smile—"yes, I know that, Sir David."

He stooped his lips to her hand as he bade her farewell, and his steel-blue eyes were dim with moisture as he left her.

"Poor child," he said to himself; "what a cruel fate!"

As he passed into the governor's room his face was very grave. Lord Ivor was there waiting; Mr. Challoner, the governor of the prison, was with him. He was a fine-looking man, grave in manner, but kindly; a bonnie little girl of five or six, with big blue eyes and a mass of golden curls, was playing about the room—his daughter.

The Earl turned rather eagerly as Sir David entered, and Mr. Challoner rose to greet the great advocate, whom he knew well by reputation.

"She is bearing up bravely," said the lawyer, in a few moments. "I hope we shall prove her innocence, which, to me, is as clear as the sun in heaven."

"And to me," said Mr. Challoner, warmly. "I would stake my life upon her truth."

The Earl held out his hand in silence; it was as cold water to a thirsty soul to hear these men affirm her innocence so warmly, and hope sprang up in his breast. Her guiltlessness must be proved—it could not fail to be so; for she was innocent, and Heaven is just.

* * * * * *

It was the day before the trial, and Jean Blair had been five weeks confined to a solitary prison cell, for the assizes had been that space distant when she was arrested. Through the kindness of the governor, she had been spared some annoyances and discomforts; but no care could save her from many, and she had felt her imprisonment acutely; it could not but be so.

She, who had never known any want of freedom, felt stifled and suffocated in her restraint, and she rebelled fiercely against the iron hand which kept her there. Sometimes in her darkest moment she had regretted that she had not yielded to that dreadful temptation, that she had not taken the poison and so saved herself; but the feeling was quickly repulsed. She would be patient she would trust; and sometimes the terrible misery she suffered made her cry out, at others, the beautiful resignation to the will of Him who doeth all things well made Mr. Challoner's eyes grow dim with tears.

She had books and writing materials provided for her, but she made little use of either, although at times she tried to read; it seemed as if the trouble which had fallen upon her had confused the bright, clear intellect; and sometimes, in moments of irrepressible weakness and rebellion, her mind had seemed to wander. She was not without visitors either. The Earl came daily; once his sister had come, but her distress at Jean's position had been so overpowering, that she had fainted away, and Jean was too unselfish not to refuse any further visits from her. Collins was with her constantly, and her presence gave Jean very great consolation. The woman's love was strong and faithful, and her education had not rendered her so sensitive to outward things as poor, pretty Lady Florence's. Her calmness and cheerfulness, too, helped Jean greatly; for Lord Ivor, though he was brave in her presence, could not hide the marks which suffering and anxiety had graven on his face, and his visits give her a pleasure evenly mixed with pain.

The long confinement was telling on Jean's strength; she was very weak and languid, her sleep was troubled, she arose as fatigued in the morning as she had been over night, and it was an effort to drag her weary limbs across the cell when she went to meet the Earl when he came to pay his daily visit, striving bravely, poor child, to hide her languor and debility from his eyes—striving vainly but bravely, for his eyes saw, and his heart ached bitterly.

The dusk was gathering around her—it grew early dusk in the cell—but the setting sun, ere it sank to rest, sent a last red glow at the little window and brightened the dying day. Jean was standing by the window, in the sunlight, leaning her white brow against the cold bars wearily, while large tears rose in her eyes and fell heavily upon her clasped hands, tears of anguish unutterable, which she was too weak to force back.

Steps came along the passage, the key grated in the lock, but she did not turn round; she knew the step which entered the room, and she did not wish her lover to see the tears.

"Come and watch the sunset," she said, holding out her hand, but still keeping her face to the window. "There is such a beautiful 'golden glory' in the sky Archie."

He came to her side, and holding her tenderly within his arms, looked for a moment down at her, then turned his eyes away to the "golden glory" in the far west. Jean leant her head against him wearily; the support of his arm was pleasant to her in her weakness, but her eyes did not move from the sunset, which she saw but dimly through the welling tears.

"How are you to-day, my darling?" he said, at length.

"Very well," she answered, gently. "I have been expecting you, Archie; you are late to-day."

"I have been with Sir David," he answered. "He is very hopeful for to-morrow, Jeanie."

She smiled a little sadly.

"And you, are you hopeful, my dearest?" he said, softly.

"I think I am past hope," she answered, with a tiny laugh. "I feel as if nothing can hurt me any more, Archie. I think my heart is dead."

He looked down at her with a new anxiety in his eyes.

"My heart is dead," she repeated, wearily. "I have no strength even to suffer now. I am only longing for rest. Do you think rest will come to me soon, Archie?"

"My poor darling," he answered, tenderly, "I do not wonder at your depression, and I have so little comfort to give you. Only you must not wish to leave me, Jean."

"You would not keep me here, Archie, if you love me," she said, with a little pale smile.

He drew her closer to his side, smoothing her hair with tender hands.—To be continued.

RECENT LITERATURE.

Winter and Its Dangers. By Hamilton Osgood M. D., of Boston. Published at Philadelphia by Lindsay and Blakeston. Price 50 cents.

This is the sixth volume of the "American Health Primer" series which—in the language of the editor, Dr. W. W. Keen—is designed to diffuse as widely and cheaply as possibly among all classes, a knowledge of the elementary facts of *Preventive* Medicine, and the bearings and applications of the latest and best researches in every branch of Medical and Hygienic Science. They are intended to teach people to take care of themselves, their children, pupils and employes. They are written from an American standpoint with especial reference to our climate and mode of life; each volume, if the subject calls for it, being fully illustrated, so that the text may be clearly and readily understood by any one heretofore entirely ignorant of the structure and functions of the body. The object of the series is to furnish the general and unscientific reader, in a compact form and at a low price, reliable guides for the prevention of disease and the preservation of both body and mind in a healthy state."

The editor has shown admirable judgment heretofore in the selection of both writers and subjects and the work under notice is if possible more excellent than any of its predecessors.

The author is "dreadfully in earnest." He pleads right heartily with his readers to avoid errors of living; in fact, his earnestness is a marked quality of his writing. What would be thought of a lawyer who should urge on people's attention the beauty of the Golden Rule, and warn them that litigation was unnecessary? Would not his disinterestedness amaze us? And yet, here is a physician who, with all the might of his really able pen, pleads, urges and beseeches us to do away with the physician.

The earnestness, strong common sense, lucid style and disinterestedness of the author appeal to the reader's attention at every turn. As for the book itself, it tempts an inordinate use of the scissors.

The book is divided into ten chapters, as follows:

I. General Considerations.
II. Dangers Arising from Errors of Dress.
III. Carelessness and Ignorance in Bathing.
IV. Inattention to Pulmonary Food.
V. Danger from Over-heated Air.
VI. Indifference to Sunshine.
VII. Sedentary Life and Neglect of Exercise.
VIII. The Dangers of School Life in Winter.
IX. Winter Amusements.
X. Closing Considerations.

Chapters III. and IV. deserve the careful consideration of every parent in the land. The appalling ignorance on the subject of bathing and the indifference to pure air are responsible for many painful diseases and much avoidable pain and misery.

If any words of ours could induce readers generally to invest in Dr. Osgood's book, we should say them, reiterate them, and print them in italics, for the work deserves a place in every library in the country.

Water Color Painting. By Aaron Penley. Edited by Susan M. Carter. New York: G. P. Putnam's Sons. Price 50 cents.

From the author's preface we quote:

"Thirty-seven editions having already passed into the hands of the public, will, I think, be a sufficient guarantee that the contents of my little Work have been fully appreciated and acted upon. Although the pages are few, yet they are the result of a long experience; while they explain, in as simple a manner as possible, the whole system of Painting in Water Colors, showing the means by which effects are produced. The several Tables of Colors will be found to comprise combinations of every tone and tint requisite for the representation of nature under all circumstances. Attention to detail, and a careful reading of each progressive step, will, I think, ensure success in the execution of a Water Color Drawing; but it must ever be borne in mind that, without practice and study, it will be impossible to arrive at any degree of proficiency, even as regards manipulative dexterity, in so beautiful a branch of the Fine Arts, as painting in Water Colors." And in the introduction the editor says:

The intention of this system of Water Color Painting is to direct the student in this branch of Art, by pointing out the means by which the several combinations of color are produced, as well as to explain all the manipulative processes exhibited in the present advanced state of Painting in Water Colors.

Assuming that a knowledge of the proper materials for Water Color Painting has been obtained from other sources, (See Rowbotham's "Art of Painting in Water Colors"), and that the reader has made himself familiar with the management of the pencil, so far as outline and form are concerned, (See "The Art of Sketching from Nature," in this Series of "Art Hand-Books,") we will, after a few words upon "dulish" and upon the principles and the necessary requirements of Art generally, enter into the practical details of this branch of Painting, going through its several stages of progression, and endeavoring at the same time, to give some insight into the method by which certain effects are produced. The aim and scope of the work are well set forth in these extracts, and for ourselves, we can heartily commend the volume to all interested in this branch of art.

"AN' SILLER HA' TO SPARE."

Next to walking in silk attire, as the old song has it, it is a good thing to have silver-ware to spare, and silver-plate answers the same purpose with the advantage that one is free from the attacks of thievish covetousness, while possessing an article equally as serviceable as silver. Our illustration is taken from premium No. 68 of The Rural's premium list for this season and shows the latest design of Messrs. Hall, Elton & Co., one of the largest and oldest firms in the country in this business. This ware is especially noteworthy for its durability. It is *standard* plate. One dozen of these forks or one dozen tablespoons are given for a club of 16 subscribers, or one dozen teaspoons for 8 subscribers. Agents are supplied with sample copies, posters and every requisite for a vigorous canvas on application. As a present, nothing is superior to good silver-plated ware, and the plan on which it is offered enables us to give agents these goods for such very small clubs that it is an easy matter for an active person, either man, woman or child to collect the small club by a slight personal effort among friends and neighbors. Every subscriber also gets the seed premiums, so it will be seen that all are thought of and share in the general distribution of good things given by the Rural.

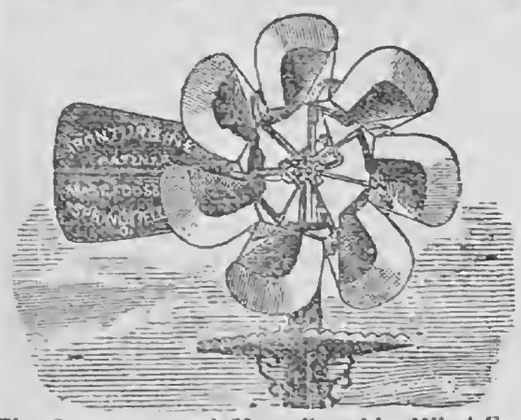
Our whole list is full of attractive things and it will be a very easy thing to secure one or more if one goes to work *now* and takes advantage of the subscription season which is just opening. All the specimen copies needed will be furnished on application.

Implements and Machinery.

Halladay Standard.

VICTORIOUS AT
Phila., 1876—Paris, 1878
25 Years in Use.
GUARANTEED SUPERIOR
To any other Windmill Made.
17 SIZES—1 MAN TO 45 HORSE POWER
Adopted by the leading R. R. Co.'s and by the U. S. Govt. at Forts and Garrisons.
$3,500,000 worth now in Use.
Send for Catalogue "B" and Price List.
U. S. WIND ENG. & PUMP CO.,
Batavia, Ill.

NEW IRON TURBINE
WIND ENGINE



The Strongest and Most Durable Wind Engine in the World. Sold by Dealers in nearly every County. Inquire for it. Every Wind Engine Fully Warranted.
Send for Circulars, Price-List and information to
MAST, FOOS & CO.,
Springfield, Ohio.

WINGER'S IMPROVED
WIND-MILL FEED GRINDER.

Operated by pumping Wind-Mills. A novel and perfect feed mill for grinding all kinds of grain for stock and house use. Cheap, reliable and durable. Agents wanted everywhere. Also the old and reliable Stover, the well tried, strong, durable and self-regulating, solid wheel Wind-Mill, which took the Centennial diploma as well as grand medal. Branch office, Greencastle, Pa. Send for catalogue to STOVER WIND ENGINE CO., Freeport, Ill. E. B. Winger, Gen. Manager.

THE NEW
ELASTIC TRUSS
Has a Pad differing from all others, is cup shape, with Self-Adjusting Ball in center, adapts itself to all position of the body, while the Ball in the cup presses back the Intestines just as a person would with the Finger. With light pressure the Hernia is held securely day and night, and a radical cure certain. It is easy, durable and cheap. Sent by mail. Circulars free.
EGGLESTON TRUSS CO., Chicago, Ill.

Miscellaneous.

IT DEVOURED THE LIFE.

A Happy Escape from a Painful Death with All its Attendant Sufferings.

How Vigor, Energy and Hope Were Restored After Disease had Partially Consumed the System.

Testimony Bearing Upon the Nature of the Trouble and Plan of Relief.

Welcome News to All Sufferers from Catarrh Deafness, Throat Troubles, Bronchitis and Consumption.

Read, Remember, Rise, Resolve and Recover.

Dr. C. R. Sykes, of Chicago, was for 24 years a sufferer from Catarrh. So bad did the disease finally become that physicians refused to prescribe for him, and his case was considered hopeless, from Consumption, into which it had developed. As a last resort he attempted treatment with a remedy and upon a basis wholly his own, and the result was a complete cure. Realizing the remarkable nature of his recovery, he has given the remedy to the public for nine years past, and the number of remarkable cures effected is simply wonderful. From the infinite number we can only mention a few, among them the following:

Miss Annie Green, of this city, 88 Larrabee St., came to Dr. Sykes for treatment after having vainly tried Colorado and numerous physicians. Her palate was entirely gone, and a hole as large as the end of the thumb was eaten through the veil palate. A hole was also eaten clear through the nose. In addition to this her lungs were weak and sore; she had a bad cough, and no appetite. By six week's treatment the holes in the palate and nose were completely healed, the breath was sweet, there was no cough or soreness of the lungs, and she had gained 22 pounds in flesh.

Mrs. Nancy Mitchell, of Juniata, Neb., has just made the following statement:

I came to Chicago from Juniata, Adams Co., Neb. and put myself under Dr. Sykes' treatment for a Cancerous Catarrh, which had eaten a hole through the roof of my mouth as large as a 25-cent piece, and had then eaten through into my nose, and actually destroyed more than one-half of my nose, removing two large bones. It had also eaten clear to the corner of one eye, and to the ridge above my nose but left the lower end of it round. Both my nostrils were as raw as they could be; and now, after only two weeks' treatment, my recovery has been so rapid I am sure in a short time to be entirely cured.

The unusual nature of these cures would seem impossible were they not substantiated by numerous others. They are not only wonderful; they are also permanent; while the great feature of it all is that the medicine can be used at home, and is available to all.

The remedy is known "Dr. Sykes' Sure Cure for Catarrh," which, with his insufflator, all complete, is sold for the low price of $1.50 by the Doctor, at his Laboratory, 163 East Madison St., Chicago, Ill., and by all Druggists. Office consultation free. Book of full information by mail for 10c., well worth $1.

Don't suffer any longer when you can be so readily cured.

New Publications.

The Springfield Weekly Republican

A Comprehensive, Intelligent and Independent Weekly Journal of

News, Politics, Literature, General Information and Enlightenment.

[Established in 1824 by Samuel Bowles.]

The Weekly Republican is a convenient quarto sheet, with seven pages devoted to reading matter, covering a large but choice selection of the best features of The Daily and Sunday Republican, with re-written and carefully classified news summaries and considerable original matter.

Among its principal contents are:

News of the Week—A page of Editorial Note and Comment and compact review of the general news of the week.

Local Intelligence—A page summary of the news of Springfield, Western Massachusetts and all the New England states.

Regular News Letters from Washington and Boston by well-informed observers, with interesting correspondence from an accomplished journalist in New York, also from contributors in various sections of the country and in Europe.

A Weekly Review of the doings of Congress and the Massachusetts Legislature by our special reporters, with excerpts from the notable debates.

Editorials—From one to two pages of thoughtful and interesting articles on Topics of the Times by intelligent, independent and gifted writers.

Literature—A regular literary letter from a well-known Boston critic, with frequent reviews, notices and literary news from other sources.

Occasional Stories, original or selected; choice bits of Poetry; a column or more of carefully prepared Religious Intelligence; compilations of valuable information for the Farmer, Mechanic and the Housewife; entertaining Miscellany, gleaned from the richest fields, etc., etc.

Money and Business Matters and Markets; Births, Marriages and Deaths.

The Weekly Republican is thus a valuable general newspaper for the family, for the farmer and for the active business or professional man who cannot keep pace with detailed daily issues, and especially for New Englanders at home and abroad.

SUBSCRIPTION.—Four Cents a copy; 75 cents for six months; $1.50 a year; in clubs of 10 or more, $1.25 a copy, one year and a free copy to the getter up of the club. A special cash commission to be made known on application allowed to postmasters and others acting as local agents. Newsdealers supplied at $2.50 per 100 Copies.

Specimen copies sent on application,—and all subscriptions payable strictly in advance.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

PEN THOUGHTS FROM "EVERY-DAY HOUSE."

MRS. ANNIE L. JACK.

"And I know why the bird with the spring time
To the gnarled old tree comes back;
He has tried the south and the summer,
He has felt what the sweet things lack."

So wrote a dear friend of mine who is one of America's sweetest singers, and the lines haunted me, with a truth I could not deny, during my homeward journey toward this land of snow. Full and rich had been the days and weeks. No words of mine can tell in a "pen-thought" of the enjoyment I found, meeting, as I did, many of the men and women of the day, whose words of wisdom and songs of melody are known to thousands. Science, art and literature, each and all, gave me a glimpse of their treasures and spoke words of kindness and regard. Besides this, I saw the "*Rural*" and his wife and "weans," as the Scotch folk would say. I enjoyed with them, at the Rural Farm, the pleasure of a Sabbath day's rest and their large hospitality, and witnessed the entire interest and enthusiasm they evince in every department of this paper.

But New York is a noisy city to quiet country people. We stared in amazement at the elevated railway, and gazed with awe at the seeming pigmies working with nothing but wires on the East River bridge; and then came the truth of Trowbridge's lines:

"Land all houses, and roads all stones,
That deafen your ears and batter your bones"

So, after all, we turned homeward, resolved to once more seek the "simple tastes and mind content" that lie within our sphere, and to tell the result of our experience to the Rural sisters.

There is no class to whom a glimpse of the outer world is more necessary than those interested in domestic economy. We learn a great deal by comparison, and every housekeeper is on the alert when at other people's tables, to gain some new idea or plan, that will make home brighter, or add to her satisfaction therein. During the first few days after one's return is a very good time to take judgment upon your own works. Are the children where you have visited better behaved, as well or better dressed, than yours? Are the daughters more loving and dutiful, the sons more helpful? Was the table and its appointments more neatly kept, the food better cooked, than yours? All these and other questions, by way of comparison, present themselves to your mind, and are valuable, as they encourage you to better things and help to make home more attractive. The contact with the busy outer world is a good tonic to our sleepy, stagnant lives; the stirring words that fall from the lips of an orator, or the poems we may hear from one with voice too sweet for aught else of earth, may refresh and cheer us; but I think every housekeeper will agree to the feeling I have mentioned—the value of distance and return to home, in the way of *comparison*.

MAKING "HIRED HELP" RESPONSIBLE.

MARY WAGER-FISHER.

ONE of the rules at "our house" is to make the "help," both on the farm and in the house, responsible for the loss and breakage of articles confided to their care and use. The result is that the breakage of crockery is almost nothing, and other losses are in proportion. I think that "help," as a rule, like this method of management much better than the "fuss" and scolding that usually accompany breakage. They learn a double lesson in this way: to be careful, and to know the cost and value of things. Of course, the master and mistress can always make whatever allowance they think best in regard to accidents. Whenever I have occasion to introduce "new" help into my family service, I inform her at the outset, that what she breaks she will have to pay for, and the announcement is always good-naturedly received. Not long ago, I overheard a new arrival in the kitchen remark to my housekeeper: "Madame's rule is a good one about breaking dishes. I was at a place two years ago, where there was the same rule, and where I broke some dishes. But mind you, I haven't broke any since. Some girls slam the dishes around and don't care whether they break 'em or not. I guess if they had 'em to pay for they would be more careful," and I was quite of the same mind. It is sometimes well to know the opinions of hired help on household management.

DOMESTIC RECIPES.

Raisin Pie.

ONE egg; one-half cup of raisins well stewed; one cup of sweet cream; sugar to taste. Beat well together, and bake with two crusts. Currants (dried) instead of raisins are very nice.

Hasty Pudding.

Place on the stove a pan containing six teacupsful of sweet milk. Beat two eggs well, and add one teacupful of milk; six tablespoonsful of flour and a little salt; beat well together—then stir it in the milk on the stove just before, or as it begins to boil. When as thick as mush put in greased cups to mold. Made in the morning and eaten with sweetened cream for dinner, it is excellent.

Gingerbread.

One cup of sugar; one cup of sirup; one cup of sour milk; half cup of butter; one tablespoonful of ginger; one teaspoonful of soda; flour enough to make it thick but not so stiff but that it will smooth without the aid of a spoon. Bake in a small-sized dripping-pan and cut out as you want for the table.

MRS. H. C. UNDERWOOD.

Apple Jelly.

A beautiful and delicious jelly may be made of any sour red apples such as Spitzenbergs, Baldwins or Northern Spys. Wash, quarter and core without paring and cook until the whole mass has a red tinge and is soft. Pour into a colander, drain off the juice and run it through a jelly-bag. Boil again one-half hour. Measure and to every three cups of juice allow two cups of sugar and boil again fifteen minutes. If highly-flavored jelly is liked, lemon or vanilla may be added before it is turned into the cups. Most jelly recipes give an equal measure of sugar and fruit juice, but in making jelly of winter apples I have found two of sugar to three of fruit, give a good firm jelly that will cut smoothly with a knife.

Apple Sauce.

By using a little care in making fresh apple sauce, it may be a much more appetizing dish than the "mussy pop" that is often seen on our tables. If you have a variety to choose from, always take those that do not go to pieces readily when cooked. (I have found the Spitzenberg to be the best). Peel, core and cut into nice even quarters, rejecting any bruised or knotty pieces. Cook them in a porcelain kettle or any earthernware dish. I have an old-fashioned granite-ware pudding-dish that I have used for years in cooking apples. Pour *plenty* of boiling water on them and boil until you can pierce them readily with a fork, and no longer. Then turn carefully into your table-dish without breaking the pieces; sprinkle with sugar and cover until cool.

Canned Quinces.

Quinces are scarce in this section of the country this year, and therefore our supply for canning is limited. I may as well confess that *my* supply was *quite* limited; in fact, I had just two nice, fair quinces, which a kind neighbor had sent me. Yet from those two quinces I managed to fill four quart cans with most delicious sauce.

In the first place, I pared the quinces, being careful to save every particle of the skin, the cores and the seeds, which I boiled together in a little water until soft. Boiling extracts from the cores a gummy substance, which is peculiarly rich in that delicious flavor which constitutes the only value of a quince, and of which I wished to save every atom. To the water which I strained from these after boiling, I added the two quinces cut into eighths, four pounds of sugar and eight pounds of rich, sweet apples, pared and cut into nice even quarters (that were without spot or blemish), with water enough to cover them. I boiled them nearly two hours, until the apples were perfectly soft and yet held together nicely; then sealed them in quart cans. Being cooked in so much sugar, they hardly needed self-sealing cans, but the cans are so cheap now that it seems better to use them; then one need have no anxiety about fermentation. At this time of year one has cans that have been emptied of strawberries and other fruit put up early in the season. The remnant that remained after filling the cans was eaten at the tea-table, and was honored by a compliment; for paterfamilias, being ignorant of the large substitution of apples, innocently pronounced them the "best canned quinces he had ever eaten." E. S. R.

CHRISTMAS SWEETS.

Hickory-nut Macaroons.

MAKE frosting as for cake; stir in enough pounded hickory-nut meats, with mixed ground spice to taste, to make convenient to handle. Flour the hands and form the mixture into little balls. Place on buttered tins, allowing room to spread, and bake in a quick oven.

Hickory-Nut Cakes.

One cup of white sugar; one beaten egg; half a cup of sifted flour and a cup of minced nuts. Drop on buttered tins.

Ice-Cream Candy.

One and one-half pound of "A" sugar; two tablespoonsful of butter; one and a half teacupful of water; the rind of half a lemon. Boil until it will crisp when dropped into cold water, set aside and when it has cased bubbling, stir in the juice of a lemon. When cool, take out the peel and pull until white. Draw into thin sticks and cheek into three or four-inch lengths. The sirup should be stirred all the time it is boiling. MARY B.

News of the Week.

MISCELLANEOUS.

Monday, Dec., 8, 1879.

A sad spectacle was witnessed at Smithport, Pa., on the 4th inst.; it was the execution of Andrew Tracy of the same place, who, on the 18th of last September, shot and killed his sweetheart, Mary Ittley, in the street. When the drop fell the rope broke and precipitated the doomed man on the ground; a new rope had to be provided and adjusted and he was picked up and brought on the scaffold a second time, all of which painfully prolonged the scene. He was convicted of the crime and there can be no doubt of his guilt, but there is doubt as to the justness of this severe sentence. Tracy was an educated and even learned young man, but if the published peculiarities of his character and behavior are true, he could not have been in his right mind, neither at the time of the tragedy nor for years before. But he is gone and the law is satisfied.

A dispatch from Toronto, Dec. 4th, states that smuggling is carried on to an immense extent on Lake Erie at the nearest points to the American shore. The attention of the Dominion Government is being directed to the circumstance and immediate action will be taken to prevent it. The matter will also be brought to the attention of the authorities at Washington with a request for interference.

Employers are beginning to respond to the impulse of the better times. The wages were recently raised from five to ten per cent. for 600 mechanics employed in the car shops of the Delaware, Lackawanna, and Western Railroad at Scranton, Pa., without any request on their part.

The Virginia Legislature met at Richmond last Wednesday in the first biennial session, and the readjusters elected all the officers in both houses. Gov. Holliday's message is almost wholly devoted to a discussion of the public debt. He fully indorses the settlement made during the last session, known as the McCulloch bill, by which the creditors agreed to forego back interest due on their money, and states that, notwithstanding all the agitation looking to a repeal of the measure, nearly $8,500,000 of old bonds have already been exchanged for new ones. Louisiana voted last week for State officers and on the adoption of the new State constitution. The democrats have probably elected Wiltz governor by 20,000 majority. The new constitution was adopted by a large majority, while the debt ordinance was probably defeated. The democratic majority in New Orleans is about 6,000.

Chief Colorow surrendered himself to the peace commission at Los Pinos, Col., Monday, and testified that he took part in the Thornburgh fight, which he said, was caused by accident. The troops were trying to avoid the Utes by taking the trail, instead of the regular road through Milk River canon, while the Indians were trying to do the same thing. They were surprised when the command came up, and began the fight quite unexpectedly to themselves. Colorow swore positively that the Mormons had promised to assist the Indians in any war with the United States troops. The commission is now much more hopeful of accomplishing something than formerly. The surrender of 12 Indians engaged in the White River massacre will probably be demanded Saturday. Ouray will attempt to carry out the demands, and a lively Indian fight may be witnessed. The Utes attacked the herders of a herd at White River, from which the troops obtained their meat, Sunday night and drove off the whole herd.

FOREIGN.

The land agitation in Ireland is still the chief topic of interest in Great Britain. The arrested agitators have been committed for trial, but in the meanwhile all three of them have been released on bail, and with the *eclat* of their "persecution" fresh upon them, are now spreading their opinions, a trifle more guardedly, before vast audiences in different parts of the "Gem of the Sea" and the "Tight Little Island." Immense crowds in Liverpool, New Castle and London, have been sympathizing in the fiery accounts of Irish grievances eloquently expounded by Parnell, McDavitt and others; and there is even some hope that the more phlegmatic and law-abiding English tenants will share in the agitation for a modification of the present land laws. In Ireland itself the public feelings are kept at fever heat by patriotic spouters and inflammatory newspaper articles. Landlords are beginning to see that very considerable concessions are indispensable; and the public authorities must soon realize that the arrest of a few extreme mouthpieces of popular discontent is a poor expedient for removing its cause. Mr. Gladstone, now canvassing in the Liberal interest for election to Parliament in Edinburghshire against the whole power of the local chief potentate, the Duke of Buccleuch, says boldly that Ireland should have Home Rule in local matters. On Friday last Thomas Brennan, another of the most turbulent orators, was arrested in Dublin for a speech made at a huge mass meeting at Balla on the 22d ult. This has intensified the excitement.

The cold in Afghanistan is intense. The English troops are in winter-quarters. Russia and Persia are less friendly; the latter will occupy Herat. Afghanistan, along with the English in spring. Several of the newly appointed governors of Afghan provinces have been resisted; one or two of them slain and now that military movements are suspended, the whole country beyond the British lines, seems to have fallen into a state of anarchy. Yacoob Khan is on his way to India, a close prisoner, a condition in which he will probably remain for years, if not for life. Although it seems impossible now to legally convict him of having caused the massacre of the embassy, there is no more doubt but that he could have prevented it, had he not been culpably negligent. Negotiations between Germany and Austria for a commercial treaty giving free trade, have fallen through. Germany wanted too much; Austrian merchants disgusted.

John T. Delane, for nearly 40 years editor of the London Times is dead at the age of 62. Baker Pasha fixes the Turkish police force at 60,000 men. Russia seems desirous of conciliating Germany by granting long-refused commercial facilities to Teutonic traders. The German Baltic provinces of the Czar are violently agitated by a project to make the Russian language the legal language therein, and in other ways to Russianize them.

The King of Denmark has been visiting Berlin and is reported to have come to a settlement with regard to the claims of his son-in-law, the Duke of Cumberland, to the throne of Saxony. He will probably resign his claims, and in return be made Duke of Brunswick and receive back his confiscated millions. The latest cablegram, however, says that not a word was spoken about the matter.

Saturday week Alfonso, of Spain, took the Archduchess Christine of Austria as his second wife, to succeed poor dead Mercedes——bull-fights, galore and all sorts of joyous manifestations. The emancipation of Cuban slaves will probably receive some attention now that due measures have been taken to provide an heir to the Spanish throne. Meanwhile a fresh rebellious outbreak in the "Ever Faithful Island" has inflicted great damage on the sugar industry in the eastern part of the island, and threatens more.

In France the sessions of the Legislature have been removed from Versailles to Paris, where the first session has just been opened since the Communistic revolt of that city in 1871. Another batch of 80 Communists has been pardoned, but agitation still continues for a complete amnesty. The Extreme Republicans in France insist that all office-holders not actually belonging to that party, should be dismissed at once. Lately, however, this faction has received a severe check, by a very decided vote of the legislature repudiating their extreme measures. This, however, has caused a split—a number of 'em rather—in the Republican ranks, and a speedy change of the present Ministry is probable.

On Dec. 1, as the Czar was approaching Moscow on his way to St. Petersburg from the Livadia where he had been staying some weeks, an attempt was made to assassinate him. The railroad track over which his train was to pass had been undermined and a large quantity of explosive material placed there, which was to blow his brains to pieces. A change of schedule on the road, however, caused the explosion to destroy another train. It was understood that on his arrival at Moscow he intended to call a number of unofficial advisers to aid him in governing the empire as well to liberalize his government; but now it is probable repressive measures will be more rigidly enforced than ever. The weather all over Europe is very unusually severe. In the British Isles a 20 hour snow storm has covered the country many feet deep, and caused much delay in railroad travel. Germany and northern France are much in the same condition, while the more northerly countries are suffering from a winter of nearly unexampled severity so early in the season.

A Berlin dispatch of the 2d inst. says that Prince Bismarck will probably arrive there on Thursday. It seems that the negotiations between Bismarck and the Vatican have suddenly closed, as Bismarck will not agree to the restoration of the German Bishops. There seems to be every probability that the old struggles are recommencing. An appeal from Cardinal Manning for subscriptions to alleviate the distress in Ireland was read in all the Catholic churches in London on Nov. 30. It is stated that in the West of Ireland such hunger, poverty and want are now to be seen as have never been known since the great Irish famine. A general collection all through the Roman Catholic churches in Great Britain was made yesterday.

Figures Don't Lie.

SPARTA, Union Co., Oregon, May 30, 1879.
BUTTER IMPROVEMENT CO., Buffalo, N. Y.:

Sirs—The package of "Butter Maker" forwarded by you to W. W. Ross, Esq., of this place, was handed over by him to me for trial, and orders to report the results to you, as I have the management of his dairy.

I have the honor to report that one gallon of sweet cream churned at a temperature of 55 deg. and treated with the "Butter Maker" according to directions accompanying package, produced four and one-half pounds of butter of a fine golden color, and firm, waxy texture, and of delicate flavor; time occupied in churning and gathering the butter, twenty minutes.

One gallon of sweet cream, same lot, churned without the powder, produced four pounds of butter several shades lighter in color, not so firm or waxy in texture, but no perceptible difference in flavor; time occupied in churning, at same temperature as above, forty-five minutes. The fine, even grain, rich golden color, increased quantity from the same amount of cream, and the difference of time occupied in the churning and gathering the butter, are greatly in favor of using your preparation, and I have no hesitation in recommending the same to my friends and the public generally. Very respectfully, your obedient servant, G. W. EASTERBROOK.

FOR BRONCHIAL, ASTHMATIC, and Catarrhal Complaints, and Coughs and Colds, "*Brown's Bronchial Troches*" manifest remarkable curative properties. Imitations are offered for sale, many of which are injurious. The genuine "*Brown's Bronchial Troches*" are sold *only in boxes*.

IN answer to numerous inquiries, we can cheerfully say that Dr. C. R. Sykes, whose card appears in this issue, is an old resident of Chicago, a regular graduate, honest, honorable, and responsible, and as a physician takes first rank in his chosen specialty of Catarrh and its complications.—*Farmers' Review*.

Feeble Ladies, Aged Persons, Weakly Children, Persons of Sedentary Habits, all need Hop Bitters.

Lyon's Patent Heel Stiffener is the only invention that will make old boots straight as new.

The Markets.

THE GIST OF THE MARKETS.

PRICES of farm products still have, in most cases, an upward tendency at the chief collecting centers. The higher figures for grain for future delivery up to May next, show that speculators have little fear of any immediate fall in prices. Besides the loss from vermin, the risks of fire and the cost of storage, however, farmers who are holding back their crops, should not forget the considerable loss in weight of grain during storage. The amount of this has lately been determined with the greatest accuracy by officials in charge of the State Granaries of Prussia on the basis of many years' experience. The loss in wheat, rye, barley, and podware amounts to 1.3 per cent. in the first quarter of a year; 0.9 per cent. in the second three months; 0.5 in the third, and 0.3 per cent, in the fourth quarter a loss, therefore, in the first year of exactly 3 per cent. In each following year the loss is estimated at ¾ per cent. in the three months, or 1 per cent. annually. In the case of oats the loss is 1.7 per cent. in the first quarter, 0.9. per cent. in the second, 0.6. per cent. in the third, and 0.3 per cent. in the fourth, a total loss therefore during the twelve months of 3.5 per cent. In each succeeding season the loss is at the rate of 0.3 per cent, per quarter, or 1.2 per cent, in the year. These observations relate only to the high class grain stored in the Government magazines; in inferior grain the loss would be proportionately considerably higher.

All over the country as the packing season progresses, the prices of hogs are rapidly advancing until now Chicago pays higher figures for her supply than at any time within the last two years. Nearly a twelvemonth ago we predicted that the pigs-pen was likely to pay this season, and suggested that it would not be Solomon-like for farmers all to get disgusted at the low returns that then prevailed. It looks as if the top figures for hogs this winter are several steps higher than those now obtained.

By mail advices of Nov. 24 we learn that the *Echo Agricole*—the first authority on French agriculture—estimates the French consumption of wheat this cereal year at:

Bread	230,400,000 bushels.
Seed	38,400,000 "
Feed for Stock	13,720,000 "
Total	282,520,000 "

Mr. Scott, writing to the the London Times, however, puts it at 328,280,000, which seems to be a trifle too large as it would amount to eight bushels or 504 lbs. per capita, whereas 5½ bushels per head serve the usual wants of European people.

The Mark Lane Express of the 2nd inst. in reviewing the British grain trade for the previous week says, that the autumn sowing was not completed and that farmers must wait for a thaw. Farmers were pushing forward their grain to market, but so poor was it and unfit for milling, that but little of it sold except at reduced rates. Large arrivals of Russian wheat depressed the market somewhat; but holders were still firm and confident, as the Russian surplus must soon be exhausted, and the American supply cut short by the closing of the canals, while the winter consumption would increase. Indian corn was in better demand and advanced ½c. a bushel. The imports into the United Kingdom during the week ending Nov. 22, were 1,644,738 cwts. of wheat and 250,696 cwt. of flour.

Cablegrams from Liverpool, England, dated Thursday, Dec. 5, say that the grain trade during the week was extremely active, with a better consumptive demand at higher prices both for English and foreign cereals. Cargoes off coast were firmly held, while those for future arrival were in request at steady figures. Transactions that day in wheat and corn were at full rates, with an advance of 2c, in American red winter wheat. The final rates were ½c. above those for the previous Thursday. The receipts of wheat for three days were 140,000 centals, of which 88,000 were American. Wheat, No. 3 spring, steady at 10s. 4d. per 100 lbs; No. 2 spring, steady at 10s. 10d.; new western winter steady at 11s. 5d. Corn, mixed steady at 5s. 9d. per central. Cotton had declined ⅛d. early in the week, but later on prices had become firmer and closed on Thursday ⅛ cent above those of the Thursday before. American cheese on Wednesday last brought 66s. per cwt. for the best grades. From Mincing Lane (London), same date, we learn that the deficiency in the beet sugar supply of Europe is 250,000 tons, as compared with last year's yield.

SPECIALS FROM ALL CENTERS.

Until Saturday, Dec. 6.

Baltimore.—WHEAT—Southern red, $1.40@1.45 do. amber at $1.50@1.60; No. 2 Western winter red, spot, $1.50½@1.51; a rise of 4c. during the week. CORN—Southern White, 59@61c.; yellow, 60@61c.; Western mixed, spot and Dec. 63c; new, 61@61½c.—a rise of from 8@10c. per bush, in each class during the week. OATS—Southern at 47@48c.; Western white, 47@47½c.; mixed, 45@46½c.; Penn., 47@47½—a rise of about 1c. a bushel all round since last Saturday. RYE steady at 86@88c. HAY, prime to choice, Penn. and Md., $17@18 steady for the week. BUTTER, prime to choice, Western packed, 23@23c.; rolls, 22@24c. EGGS, fresh, 22c.; limed, 16@18c. COTTON—Middling, 13c.; low middling, 12½c.; good ordinary, 12½c.

Boston.—CORN—Old mixed and yellow, 63@65c.; new, 61@63c. OATS—No. 1 and extra white, 50@53c.; No. 2 white, 49@49½c.; No. 3 white and No. 2 mixed, 46@47c.—a rise in all grades of from 3@6c. since Saturday previous. RYE, 95c. Shorts, $16.50@17; fine feed, $17@17.50; middlings, $18@20. COTTON—Middling, 13½c.; low middling, 12¾c.; good ordinary, 12¾c. BRIGHTON CATTLE MARKET—Beef Cattle, ₹ 100 lbs. live weight, extra quality $5.50@5.75; first quality, $5@5.37½; second quality, $4.50@4.87½; third quality, $4.12½@4.37½; poorest grades of coarse oxen, bulls, etc., $3@4. Supply and quality better than during previous week, a falling off of fully ½c. ₹ lb. on common stock. Milch Cows, extra, $45@65; ordinary, $20@44; farrow cows, $13@26; springers, $18@25; trade improved of late; good cows sell quickly at fair figures. Sheep and lambs, 4@5c., live weight. Fat hogs, 5½@5¾c.

Chicago.—WHEAT—No. 2 red winter $1.26½@1.27; No. 2 Chicago spring, $1.25½ cash, higher for future delivery; No. 3 rejected, 96½c., a rise of from 1@4c. since Saturday. CORN 40½c. cash, a rise of 1½c. during the week. OATS, 34c. cash; higher for futures. RYE, 75c. BARLEY, 91c. TIMOTHY SEED, $2.58@2.65. FLAXSEED, $1.49@1.50. The cereals generally during the week were in good demand at higher prices than the previous week, with an upward movement at the close. HOGS—Market booming; highest prices in over two years, generally 20@30c. higher; mixed at $4.70@4.90; heavy, $4.95@5.20; light, $4 50@4.90. CATTLE—Shipping, $3.40; butchers', $2 25@3.50; feeders and stockers, $2.50@3 40; Colorados, $3.50; Texans, $2.40@2.75. SHEEP, $3.60@4.

Cincinnati.—WHEAT, $1.29@1.31. CORN, 41@43c. OATS, 35@38c., a rise of 2c. since Saturday. RYE, 86@88c. BARLEY, 90@93c. BUTTER—Choice Western Reserve, 22@23c.; prime do., 18@20c; prime to choice Central Ohio, 18@20c.—a shade lower than last week all round. HOGS—Common, $2.75@3.75; light, $4 30@4.50; packing, $4.70@4.90; butchers', $4.80@4.90—a rise of from 30@50c. since Saturday. COTTON—Middling, 12½c.; low middling, 11¾c.; good ordinary, 11¼c.

Detroit.—WHEAT—Extra white Mich., $1.33½; No. 1 white Mich., $1.33½, higher for futures; No. 1 milling, $1.29; No. 1 amber, $1.33½; No. 2 red at $1.33¾—about 3c. higher all round than last Saturday. CORN—No. 1 yellow at 49c.; high mixed at 47c.; No. 1 mixed, 45½c.; No. 2 mixed, 44c.—a couple of cents higher. OATS—Scarce; No. 1 white at 38½c.; No. 2 white at 37c; No. 1 mixed at 36½c.; No. 2 mixed at 30c.—1c. higher all round than the week before. CLOVER SEED—Prime, $5.20; choice, $5.60. DRESSED HOGS very retive, $4.90.

Indianapolis.—WHEAT, No. 2 red, $1.30@$1.32—a rise of 2c. to 3c. CORN, 33@30c. OATS, 35@37c. HOGS, $4.65@4.80—a rise of from 25 to 50c.

Louisville.—WHEAT, $1.28@1 30. CORN, white 44c.; mixed 41c. OATS, white, 38c.; mixed 37c. RYE, 83@85c.—an advance of 3c. on wheat; oats steady; rye 1½, fall as compared with prices a week ago.

Milwaukee.—WHEAT, No. 1 Milwaukee, hard, $1.25½; do. soft, $1.24½; No. 2 Milwaukee, $1.24½, spot and Dec; $1.26½ Jan.; $1.27½ Feb Prices all round about 3c. per bushel higher than last Saturday. CORN, scarce, No. 2 at 40c. OATS, No., 2, 34⅞. BARLEY, No 2 spring, 77½, a rise of 3c. during the week. RYE, No. 1 at 75c½.

New Orleans.—CORN, 54@57c. OATS, 50c. HAY prime, $22; choice, $23. SUGAR, inferior, 5½@6¾; common to good, 6@6½; fair to fully fair 6⅞@7⅜; prime to choice, 7⅛@7¼; yellow clarified, 8@8¾. RICE, Louisiana, ordinary to choice, 6¼@7¼. BRAN, 85c. COTTON, middling 12c.; low middling, 11¼; good ordinary, 11½.

Philadelphia.—Wheat, Western rejected $1.35; No. 3. red in elevator $1.43; Penn. red, on track, $1.48; Southern amber, do. $.140; No. 2 red in elevator, car lots, $1.49@1.50 higher for future delivery. Prices for lower grades a trifle off; but somewhat higher than on last Saturday for upper grades. RYE.—Penn 89c. CORN.—Old Western mixed, on track, 61; new do. sail at 58@59c. New Western mixed on track 58c. New white 57@60@62c. prices from 1c. to 3c. higher than a week ago. SEEDS,—Clover seed 7@9¼; flax seed wanted at $1.60@1.65. BUTTER.—Creamery extra 33@35c; Bradford Co. and N. Y. extra at 30@31c; Western Reserve extra 24@26c; do. good to choice 18@23c; rolls, Penn. extras 23@25c; Western Reserve 23@25c.—a fall of from 2c. to 4c. all round from last Saturday's prices. EGGS—Penn. 24@25c; Western 22@23c. CHEESE.—N. Y. factory 13½; Western, full-cream, 12½@13c. do good @12c. do. half skims 7@10c.—steady all the week. FEED—bran $16.50@$17—from $1.25 to $1.50 higher than last Saturday. COTTON.—Middling 13¾c; low middling 13c; good ordinary, 12⅜c.

St Louis.—WHEAT, No. 2. red fall, $1.32½, cash; $1.35@1.35½ for Jan.; $1.39@1.39½ Feb.; No. 3, red fall, $1.21½—from 2c. to 3½c. higher all round than last Saturday. CORN, 31½@37½ cash—steady during the week. OATS, 38½@38¾. Cash. 37½@37½; Jan.; 38¼ Feb.—from 5c. to 5½c. higher than a week ago. RYE, 79@79½—5c. higher. Barley, choice, 85c. steady. Cotton, middling, 12c.; low middling, 11¾; good ordinary, 11½. HOGS, light shipping, $4.25; heavy do., $4.50@4.75; packing, $4 45@4.75; butchers' to select at $4.80@4.95—about 60c. higher all round than last Saturday. Cattle, choice to export steers, $4.40@4.90; fair to prime, ranging from 1,000 to 1,300 lbs., $3.50@4.35; cows and heifers, $2.25@3.12½; feeders $3@3 50; grass Texans $2.25@3 25.

Toledo.—WHEAT, amber Mich. spot and Dec. $1.31½; Jan. $1.36½; No. 2. red winter $1.35½ higher for future delivery about 2½c. higher all around than on Saturday. CORN, high mixe, 42c; No. 2 spot 42½; May 48½; rejected at 42c. a rise of from 2c. to 2½c. during the week. OATS No 2, at 36½. Clover seed, prime, $5.15; No 2. $4.90 Dressed hogs $5.15.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Dec. 6.

BEANS AND PEAS.—The market is largely stocked with beans, and prices favor buyers in all grades Red beans, as well as standard whites, quoted nlf. Sales of the former are to a few Cuban shippers. Locally market produce is cheap, particularly potatoes, and when this is the case, many grades of beans weaken. Buyers seem well supplied with green peas; prices lower, @ $1.80; Southern B. E. peas dull at the late decline; $2.25 ₹ 2-bush. bag. Field peas nominal. Marrow beans, $1.50@1.75; medium, $1.40@1.65; pea, $1.70@1.95; white kidney, $1.85@2.10; red do., prime, $1.90@2; poor, $1.65@1.70; black, $1.87@1.95.

Receipts of beans for week, 27,140 bush.; exports, 1,619 pkgs.

BEESWAX.—Deliveries to this market are very small, and some little interest is shown by shippers. Sales at from 24½@25½c. for Western and Southern.

BROOM CORN.—Receipts are small and demand from manufacturers steady. Brush and short brush, choice, per lb., 7½@9c.; do., common to good, 5@7c.; hurl, good to choice, 6@7c.; do., common to fair, 5½@6c.; red and crooked, 4@5c.

BUTTER.—The volume of trade in State has not run up to a marked wholesale measure, still where steady wants of upper quality are needed there are buyers enough to give a busy aspect to dealing. Selling prices, as before, for ordinary to good table styles, are made to respond a little to the clamor for "something off," and, as before, there is no yielding in the strictly fancy fall grades. The extremes of last week are not given, but dealers have such full control of the supply that they are enabled, with the present liberal storing, to regulate their offering, and "best" often means the best that has been decided upon to show. Quite an offering of Welsh has appeared, but as it is quoted close up to half tubs it loses its special call from eastward and medium-price customers. We have seldom seen a market so generally representing owners' interest as this season's does. Even such fresh State as may straggle in while the weather permits churning for market, cannot compare favorably with city-owned reserves, and farmers will have only limited participation in the butter "boom" of '79 and '80. Western butter holds a good business locally, and exporters have reduced the stock of cheap to some extent. State pails and tubs, small dairy and fresh ends, 30c.; best lines, 28c.; good to prime, 26@27c.; fair to good, 22@24c. firkin and tub single dairies, choice, 27@28c.; do. fair to prime, 22@26c.; do., firkins, choice dairies, 26c.; do. fair to prime, 22@25c.; Welsh tubs, 22@26c.; poor State 20@22c.; creamery, finest, 35@36c.; good to prime, 33@34c.; sweet cream, 34@35c.; poor to good, 27@33c.; Western imitation cream, 23@28c.; dairy, fresh, extra, 25@26c.; poor to good, 13@23c.; factory, late made, 20@22c.; poor to good, 13@18c.; very poor Western, 10@12c.; rolls, 20@22c.

Receipts for week, 25 885 pkgs.; dos. exports, 4,500 do.

COMPARATIVE RECEIPTS AND EXPORTS.

	Receipts, pkgs	Exports, firkins.
June 1, '79 to Dec. 1, '79	931,757	216,364
" 1, '78 " " 1, '78	840,975	164,450
" 1, '77 " " 1, '77	780,775	129, 00
" 1, '76 " " 1, '76	746,150	87,8.0

CHEESE.—More has been done this week on export account, in the desire to get suitable grade for the Christmas trade abroad and shipments reach the comparatively fair amount of 39,200 boxes. Steadiness has prevailed as to prices, which show no marked change.

Quotations are for State factory: Fancy, 13c.; good to prime, at 11¾@12¼c; fair to good, at 10¾@11¾c.; half-skimmed at 3@10c.; skimmed at 6@8c. State farm dairy: Fine at 12¾@13c.; good to prime 10¾@12c.; fair to good at 9@10½c.; skimmed at 6@8c. Wis. factory: Fine at 12¾@13c.; good to prime at 11½@12¼c. Ohio factory: Cheddar, fine, at 12¼@12½c.; do., fair to good, 10@11c.; flat, fine, 12¼@13c.; flat, good to prime, 11@ 2c.; flat, fair to good, 10@11c. half-skimmed, 9@11c.; skimmed, 6@8c.

Liverpool cable quotation, 65s. Steam to Liverpool, 35@37s. 6d.

COMPARATIVE RECEIPTS AND EXPORTS.

June 1, '76, to Dec. 1, '76	1,739,808	69,223,500

COTTON.—Speculation has been unusually brisk and prices have worked upward. Latest prices are for Dec. 13.32@13.33c.; 14.42@13.50c. for Jan; 13.70@13.71c. for Feb.; 13.80@13.90c. for March; 14.05@14.06c. for April; 14.15@14.20c. for May; 14.30@14.33c. for June; 14.38@14.39c. for July, and 14.40@14.45c. for August.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

DRIED FRUITS.—Demand is very good for apples, and prices have worked up a little this week. Peaches are firm and in steady, fair demand. Small fruits are steadily held.

Apples—New North Carolina, at 7@8¼c. for fair; 9@9½c for choice; 10½11@c. for fancy sliced. Patent evaporated apples, choice, in cases, 15@16c.; do. fair to good, 13½@14½c.; N.Y. State sliced, new, 8@8½c.; quarters, choice, 8@8¼c.; new southern quarters scarce and nominal; new North Carolina peeled peaches at 16@17½c., do., Georgia, 13@16c. Peaches, Delaware evaporated, peeled at 25@28c.; do. unpeeled at 13@15c.; new halves at 8c. Blackberries at 10c. for new. Raspberries at 28@29c. Pitted cherries at 18@20c.

EGGS.—Receipts for the week, 7,150 bbls.; do. last week, 8,831 do. The demand is light, and prime fresh—the only grade sought for—about supplies it. The stale remnants of Western are large, and holders are willing to let buyers make the price, allowing loss off. State eggs now turning out well. Southern begin to arrive.

Near points fresh, doz., 26@27c.; State and Pa., 21@23c.; Canadian 18@20c; Western, prime to extra, 20@22c.; off grades, 18@19c. State limed, 17@17½c.; Canadian, 16½@17c.; Western, 16@16½c.; Southern, fresh, 21@22c.

FEED.—Sales of 40 lbs. at $18@19; 60 lbs. at $18@19 100 lbs. at $20@21, and rye feed at $17@17.50.

FRESH FRUITS.—Exports of apples for week, 19,700 bbls The offering of prime is light, as holders no longer fear heavy future supplies. Exporters continue to operate liberally, and the outlook for prices is good. The open weather is against large buying at the moment. Few Kings left. Cranberries tending higher. Lawtence and Vicar pears, $2 50@4.

Apples—Kings, State, good to prime, ₹ bbl., $3@3.50; Baldwin, $2.50@2 75; Spitz. and Spys, $2.50@3.25; Greening, $2.25@2.50; winter mixed, good to choice, 2.25@2 50; do, poor to fair, $1.50@2. Cranberries—Cape Cod, fancy, per bbl., $7.75@8; good to choice, $6.75@7 25; fair to good, $6.50@7; Eastern, large round hoop bbls., fancy, $6 75@7.25; do., fair to choice, $5.50@6.50. N. J. crates, fancy, $2; good to choice, $1.75@2. Boston box pears, per bush., $2@3; Cal. do., $3@4; do., quinces, $3@3.50. Grapes are of no particular interest. Catawba, cases, $1 75@2.50; do., loose, per lb., 3@5c.; do. Isabella, $1.25@1.50, bulk, ₹ lb., 2@3c. Nothing really prime in the line of Fla oranges has arrived: a few hf. bbl. crates have realized $3@3.50. Peanuts are in large supply with a good demand. Va. handpicked, per lb., 5@5½c.; extra prime to fancy, 4¾@4¾c; do., good to prime, 3¾@4c.; shelled, 4@4½c., Hickory, shellbark, $1@1.12. B. walnuts 40@50c. Pecans were never before in such liberal supply; 9@10c. per lb.

FLOUR.—The exports this week have reached close to 100,000 bbls, while this has taken in some full lines of city mill product for the West Indies and Provinces yet a more than usual full quantity has gone direct abroad. On shipping grades prices are very strong. Latest prices are as follows: $3.20@3.65 for inferior to fancy superfine State; $3.75@4 00 for inferior to good extra do., odd lots and lines; $4@4.25 for good to very choice do.; $4.10@4.75 for inferior to very fancy superfine Ind., Iowa, Michigan, &c.; (the latter an extreme); $5.75@6.00 for inferior to good shipping extra do., and $6@6.25 for good to fancy shipping extra do.; inferior to about choice white wheat extras, $6.00@6.85; choice to fancy do. at $6.90@8.00; red and amber winter wheat, inferior to fancy grade and family, at $6.00@7.75; round hoop Ohio, $5.85@6.25, and trade and family grands of do. at $6.25@7.75, the latter rate for very choice; St. Louis at $6@7 for inferior to very good extra; $7 00@8.00 for very good to fancy; Minnesota clear, very inferior to fancy, $6.75@7; Minnesota "straight," very inferior to fancy, at $6.20@7.00, and patent poor to very fancy at $6 75@9 00; unsound stock at from $3.85@5 75; city mill extra at $6.70@7.00 for about fair to choice for West Indies (fancy do. quoted at higher figures); do. for England, $5.75@6.15 for poor to choice; do. trade and family extras, $4.85@7.15; do. for South America, $6.75@7.25; No. 2 at $4.25@5 for very poor to fancy.

GRAIN.—For wheat, while the cable advices would seem to indicate a relatively higher market here than abroad, yet steady, full quantities find their way to the other side, and about 1,100,000 bushels have been shipped this week. The stocks here are liberal, or about 10,000,000 bushels but the closing of canal navigation will admit of their being reduced, especially as the railroads have been bringing lighter quantities.

Latest sales are or No. 1 amber at $1.51; No. 2 amber at $1.50@1.50½; ungraded amber at $1.45@1.48¾; extra white at $1.40; No. 1 white at $1.47¾@1.48¾; do. for December option, at $1.48; do. for January, at $1.52; do., February, at $1.54@1 55; ungraded white at $1.45@1.48; No. 1 red at $1.51@1.54½; No. 2 red at $1.50½@1.51; do for December option, at $1.50½@1.51; do. for January, at $1.52¾@1.54½; do., February, at $1.57@1 57½; No. 3 red at $1 41@1 42; ungraded red at $1.35@1.50; New York No. 2 spring, at $1.39 No. 2 Chicago, choice, at $1.41; No 2 Northwest at $1.39; Chicago No. 3 spring at $1.35@1.35½; ungraded spring at $1.29@132. Corn has arrived very moderately, and sold up a little; shipments for the week, 710,000 bushels. Sales of New York No. 2 at 62½@63c.; do., Dec., at 62¾@62¾c.; do., for Jan., at 62.77@62.80c.; New York steamer mixed at 61@61½c.; do., for Dec., at 59½c; do., Jan., at 60¾@60.70c.; ungraded western mixed at 60½@63¾c.; No. 3 at 60¾@60¾c. Oats have been unusually active and higher, closing with sales of New York No. 1 white at 52c.; New York No. 2 white at 50¾@51c.; New York No. 3 white at 49@49½c.; New York No. 1 at 49½@50c.; New York No. 2 at 49@50c.; do., for January, at 50c.; New York No. 3 at 48½c.; ungraded white western at 50@54c.; ungraded mixed western at 48@50½c.; white State at 50@54c.; mixed State at 51c; No. 2 Chicago at 49¾@50c. afloat.

HAY AND STRAW.—There is a good, steady demand, and with receipts moderate, prices have advanced, with shipping grade of hay selling at 60@65c., retaining qualities at 70@95c; clover at 55@60c, Straw at 90c.@$1 for long rye; 60@75c. for short rye, and 55@60c. for oat.

BUCKWHEAT Flour brings $2 30@$2.60.

HONEY—Market firm; single cases comb 1c. above annexed extremes. Single comb ₹ lb., 17@18c.; double and larger, 14@16c.; buckwheat, 12@14c.; clover extracted, 11@13c.; strained, 8@9c.

HOPS.—Emmet Wells says in his weekly circular: "The market continues dull and prices show a further decline of 2c per lb., 48c. now being the top cash price attainable for choice hops. The dullness of trade is attributed to a weakening tendency in the London market and the absence of fresh orders for export, but a more direct cause of the present stagnation is the continuance of arrivals of German hops. But little alarm was created by the receipt of the first one or two hundred bales, as a few German hops are imported to this country every year; but further importations (some brewers direct) has caused no little uneasiness on the part of holders of and speculators in the home article, who had hoped to reap a fine profit on their investments before the close of the season. We know of one hop firm who have already received over 500 bales, and who report more on the way."

Quotations are for New Yorks, new crop, choice, 41@43c; New Yorks, new crop, medium, 37@39c.; New Yorks, new crop, low to fair, 33@35c.; Eastern, new crop, 33@41c.; Wisconsin, new crop, 33@41c.; Yearlings, 7@18c. Olds, all growths, 4@11c.; Pacific coast, new, 38@43c; Pacific coast, olds (nominal), 7@12c.

There have been received this week 2,070 bales, and exported only 650 bales.

OIL-CAKE.—Western quoted at $33,50 ₹ ton.

POULTRY AND GAME.—The weather has continued bad for all fresh dressed, and, of course, stall has not improved. Canners have operated largely, induced by the unusually low figures for sound stuff. Lots that were stored on ice after the late glut do not turn out regularly good. The bulk of supply, fresh or left over, is off ring at unpaying figures.

Live poultry is low, ranging at 6@7c. fowls and chickens; 6@8c. turkeys; ducks, 35@60c. Geese, as an exception, doing well for Jewish trade, ranging $1@1.50 ₹ pair.

We quote dressed turkeys, Jersey, good to prime, 8@10c. State, Northern Ohio and Penn., prime, 6@8c.; other Western, prime, 6@7c.; fair to good, 4@6c. Fowls, Phila., dry-picked 8@11c.; Jersey good to prime, 7@9c.; State, do., 6@7c, Western, do., 4@6c.; poor, 3@4c. Ducks, Phila., dry-picked, 10@12c; Jersey, 8@10c.; State, 7@9c.; Western, 7@8c. Geese, Phila., dry-picked, 9@10c.; N. J., 6@8c.; State, 4½@6c.; Western, 3@6c.; squabs, white, ₹ doz., $2@2.25; do., dark, $1@1.25.

The demand is special, and for fine birds only. The weather does not permit lots at all off or soft to be utilized. Venison dealers request that affidavits proving when State deer were killed to be sent with invoices. This is to avoid trouble with the game law.

Canvas-backs, Havre de Grace, $2 50; W. & Norf., $2@2 25; red-heads, Western, 50@70c.; do., Norf., 40@50c.; Mallards, W. & Norf., 50@60c.; common and Teal, 20@40c. Quail, trapped, ₹ doz., $2; Partridges, State, prime, ₹ pair, 75@8 c.; Western, 60@70c.; soft and drawn, 40@50c.; Grouse, prime, $1@1.25. Tame pigeons shot, ₹ doz., $1@1.25; Rabbits, ₹ pair, 30@35c.; Hares, 35@40c.; Mink, venison, short saddles, ₹ lb., 12@14c.; State and Western, short saddles, 10@12c.; whole deer, 6@9c

PROVISIONS—Have been very active and advancing, largely due to speculative demands, which have come chiefly from a Wall street combination. Towards the close prices have receded a little. Mess pork quoted at $12.30@12.60 for old for December and January; $13.75@14 10 for new do. Bacon at 7¾c for long clear and 7¾c for short clear. Lard—Western steam at $8.07½@8.15 for spot lots; $8 10 for old for December; $8.12½ for new for January, and $8 25 for new for February. Steamline at 8@8½c. for Western. Tallow at 6¾@7c. for prime. Beef hams at $15.50@15 75. Beef at $10.50@11 for plain mess; $11@12 for extra mess.

SEED.—Flaxseed has a light sale, quoted at $1,75@2. Timothy is steadily held at $2.70@2,75. Clover in demand at 8¾@9¾c. for Western and some extra choice at 9¾c.

TOBACCO.—Export trade is very moderate, and home demand fair. Prices are unchonged.

VEGETABLES.—There have been larger exports of potatoes this week, but the stock has received additions of Nova Scotia, and prices were no better. In fact, with the large offering some grades are in buyers' favor; besides, there is no promise of an extended trade for shipment. Other items show little variation in prices. Trade fair. Potatoes, Peachblows, d.-h., 1.75@$2; Snowflake, d.-h. $1.37@$1.50; Early Rose, Maine, d.-h, $1.62@1.75; State, $1 50@1.62; do. in bulk, 1.37@1.62; do. Peerless, $1.25@1.40; N. J. do., $1; Nova Scotia, $1.50@1.75; Sweet potatoes, 2@3; squash, marrow, ₹ bbl., $1; do., Hubbard, $1.25@1.50; cabbage, per 100, $4@5.00, red do., cabbage, $3@4; onions, white, per bbl., $3 00@4 00; do. yellow, $2.50@2.75; do., red, $2.25@2.50; do., Chester, $1.75@2.25; beets, N. J., 75c.@$1; Russia turnips, 75c.@$1; carrots, 75c.@$1; pumpkins, per 100, $5@8; celery, per doz., 75c @$1.

Exports potatoes for week, 16,831 bbls.; of onions, 118 do.

WOOL.—Prices have not further advanced, but they are very strong. Manufacturers are eager buyers, but there is less of a speculative feeling, and, in consequence, fewer lots changing hands among dealers. The supplies in the country are brought down to so moderate amounts that there is no fear of an inability to sustain prices, and as the foreign markets are relatively higher than this, the only important issues are on account of manufacturers direct, who must have special assortments.

Ohio, Pennsylvania and West Virginia—XXX, 52@53c.; XX, 50@52c.; X, 50@53c.; No. 1, 53@57c.; No. 2, 47@50c.; coarse, 40@43c.; combing, 45@55c.

New York, Michigan and Wisconsin—XX, 46@50c.; X, 46@50c.; No. 1, 50@52c.; No. 2, 46@50c.; coarse, 38@40c.; combing, 45@53c.

Indiana, Kentucky and Tennessee—XX and X, 46@50c.; No. 1, 50@53c.; No. 2, 46@50c.; coarse, 38@40c.; combing, 45@53c.; do. unwashed, 35@40c.

Illinois, Iowa and Minnesota—X and XX, 43@47c.; No. 1, 48@52c.; No. 2, 43@45c.; coarse, 37@40c.

Georgia, Alabama, Mississippi and Louisiana—Fine unwashed, 43@45c; medium unwashed, 40@43c.; coarse unwashed, 34@38c.; burry 18@24c.

LIVE STOCK MARKETS

NEW YORK, Saturday, Dec. 6.

BEEVES.—Receipts for the week, 9,543 head, do. last week, 11 341 do. Moderate supplies have taken the depressed tone from the market that has prevailed for a week or so. Closing quotations show a small but positive advance over Wednesday's market, with the yards at Jersey City and 60th street cleared early in the day. Fancy stock for Christmas showing is already on the way. Sixty head of elegant Durhams, fed by J. R. Gillett, will be exhibited by their purchasers, W. Ottman & Co., at Madison Square Garden. Poor to fair native steers quoted 7¾@8¾c., to dress 55@56 lbs.; good to extra, 9@10¼c., to dress 56@57 lbs.; prime exporting goods sold at 9¾@10c.

VEAL CALVES.—Live calves not plenty, and a special call pays high prices Extra fed N. J. and Bucks Co. and choice Mount Hollys, 7¾@7¾c.; State, fair to best, 6@7c.; buttermilks, 4@5c.; grassers, 2@2¾c.; fresh hog dressed, 9@10c; fair to good, 7½@9c. Market quiet, owing to abundant cheap poultry.

SHEEP AND LAMBS.—Receipts for the week, 27,309 head; do. last week, 36,439 do. The market has been heavily supplied, and an increased demand has not kept down the offering to a price-improving limit. Sheep quoted 3¾@5¾c. for poor culls to choice wethers. Fancy Ohio export sheep brought 4¾c. Lambs, 5@6c., common to extra.

MILCH COWS.—Sales are moderate but prices hold up to $40@60 for good to prime milkers. Holders of choice animals are in no hurry to sell, as receipts will be apt to turn in their favor.

HOGS.—Receipts for the week, 40,704 head; do. last week, 42,364 head. Market firm and ¼c. higher. Sales of prime Western pork at $4.62½@4.75; N. J. pigs, 6¼c.; light pork, 6@6¼c.; other weights, 5¾@5¾c.; city dressed, 5½@6c. Tenderloins, 7incases, 7c,

Reading for the Young.

FLORICULTURE FOR YOUNG PEOPLE.

JOHN N. DICKIE.

Now, boy and girl readers of the RURAL, I design in this and succeeding articles to give you an insight into the culture of flowers. I shall endeavor to talk plain, and expect you in turn to reward my efforts by making a trial of your strength next spring, a solid phalanx of lads and lasses deep in the mysteries of practical horticulture. We will assist one another, and square accounts when the flowers go to seed.

I am going to talk to you mostly of annuals, those plants which grow from seed, blossom, perfect their seeds and die the same season. Having cultivated nearly every annual offered by our seedsmen, I have selected a number which I think are particularly worthy of cultivation, and which I always give a prominent place in my garden; and of these I shall make special mention. Now, right in the start, let me entreat you never to beg flower seeds. Don't expect to procure pleasure with a "thank you." Buy seeds of a reliable seedsman. Don't have anything to do with those kept on sale in the stores. If you do, expect poor flowers.

Never sow flower seed in the open ground unless of sorts difficult to transplant, such as poppies, larkspur, &c. A hot bed is a useful thing, but that you are not expected to have. A cold-frame is good—a box set on a bed of light, mellow soil, with a sash on top; but, for young folks, let me describe what I term a "battery bed," which for raising a small number of plants is unequaled.

Procure some flower pots, and fill with soil scraped off of sod dug out of some fence corner I said "fill" the pots. That is correct, as far as it goes, but you might go too far. Fill to within one inch and a half of the top. Sow the seed carefully, and sprinkle with sifted soil pressing it down firmly. Your pots are now ready to form the "battery." Say you have nine pots. Choose a warm, sunny location, and excavate a place sufficient to admit the pots three in a row. When in position, pack around with earth, taking care that the rims of your pots are just level with the surface of the ground. Now water, and place over the pots panes of glass, and you have a propagating bed as good as the best. When the seeds germinate, raise the glass on hot days, closing down at night. Thus at a slight expense you have a battery that will electrify the whole neighborhood when they come to see the fine flowers in your garden. It grieves me to say it, but I am compelled to stop right here. It is one of the most perfect stopping places I ever expect to find. So you will please reflect on what I have told you, and wait until we meet again.

Morrow Co., O.

THE GOOD DOG JACK.

ONE warm spring morning we heard a great shout, and on going to the door to see what it all meant, we saw a large, dark object just sweeping out of the river into the lake, and realized, before any one could tell us, that the ice had carried away our bridge, and that all communication between us and the town was, for the present, cut off. How now were we to get our mail, fresh meat, and dozens of other things which we were dependent upon the village for. We bewailed our isolated condition for a day or two, when a ferry was established, which was hauled from one side to another by ropes. This was very tedious for foot passengers, and as the ferry was large and clumsy, the man that tended it found it very hard to pull across and back for only one person. So some large planks were fastened together, forming a float, that reached clear across, and although it was very narrow walking and the river very deep at this point, we soon grew accustomed to it, and ran backward and forward without fear.

One day I went to town on an errand, and meeting some young cousins, they proposed buying a couple of gallons of molasses and having some candy and stacked corn. So we got a large jug and had it filled at the store, but on returning home they found their mother anything but pleased with the idea.

"I can't have the kitchen all in a muss with molasses candy," she protested; "you will get it all over everything, daub up every pan I've got, and leave it all for the girl to clean up; she's busy enough now, and I won't have it." In vain we promised all sorts of good behavior, Aunt L. was cross and obstinate.

"Never mind; don't let us be cheated out of a good time this way. Come over to my house and we will pop corn and boil candy as long as we feel inclined to," I urged. So we all started, four of us, with little Schuyler, a lad eight years old, carrying the jug of molasses. He ran ahead of us and commenced to cross the river on the float. Suddenly there was a scream, a loud splash, and there was Schuyler in the water, and even as we looked he sank out of sight. No man was in sight, not even the ferryman, and we all ran toward the spot, screaming and wringing our hands; but some one else was along that was not counted when I said there were four of us. That fifth one dashed like lightning past us, reached the spot before we could, and, springing into the water, caught Schuyler with his teeth as the child came up, and held his head out of water.

It was dear old Jack, who had taken in the situation as quickly as ourselves, and rushed to the rescue. Our agonized screams attracted attention, and soon half a dozen pair of arms belonging to some fishermen had relieved Jack of his burden and placed Schuyler, all dripping and terribly frightened, on the plank-float again. As soon as his chattering teeth would let him, he wailed out, "Oh, the jug! I had to let go of it, and it has gone to the bottom." Dear little cousin, we were only too rejoiced that it was the jug, and not he, that had "gone to the bottom," which he certainly would have done had it not been for Jack. In falling in he had pitched forward, and was so far from the float that we could not reach him when he came up the first time, and as it was several minutes before help came, he would certainly have been drowned but for the dog.

"How came he to fall in?" Well, he was running along, faster than he should go in such a dangerous place, and stubbed his toe. Somehow we had lost all desire that day for molasses candy, and we returned to aunt's a very sober and crestfallen party. When Jack had shaken himself dry, we hugged him and praised him all the evening.

While the ferry was still in use, and before the new bridge was finished, I concluded one day to take the next early morning train for Cleveland. One of these same cousins was with me the evening before, and as I had to get up before daylight to catch the train she proposed that I get ready and go home with her that night, as her house was much nearer the depot, and she feared the ferryman would not be on hand early enough in the morning to take me across the river. I fell in with her plan, and after packing a hand bag, gathering a big bouquet to take to friends in Cleveland, we locked up the house and started for my aunt's. When we reached the ferry no one was there to haul us over. We waited a long time; it was growing quite dark, still the ferryman did not make his appearance. "Let us go around by the railroad bridge," I suggested. "I am afraid to," answered my cousin. "It is so lonely there, so far from any house, and there are such dreadful stories now-a-days about tramps." "We have got Jack with us," I urged, "and he is ample protection. It is growing later all the time, and we will have to go at last, I fear, no matter how long we wait." So we started, and soon reached the bridge, which was a swinging one, one half open and the other half covered close by sides and top. When we had crossed the open space, and were about to enter the covered part, which was so dark we could only feel our way along the planks that were laid for foot passengers, we heard footsteps approaching and Jack, who was ahead, commenced to growl ominously. "Get out, you brute," we heard a man say, but Jack kept on, and cursing and swearing fearfully the man retraced his steps. When we got through the bridge, with our hearts beating fearfully and clinging to one another in fright, there, on an elevation, where Jack had driven him, was one of the worst specles of tramp we had ever seen. A brawny dirty, desperate looking fellow, who looked as if ready to do any wicked deed. Jack kept between us and the man until we had passed, then fell in our path, following *after*, not dashing ahead as before. Oh, how relieved we were when we neared the first house on the road, and how thankful to reach home, and how often we were called to relate our adventure, and every time we told it Jack sat up slowly wagging his tail as if he understood that he was the hero of the hour.—*Cleveland Herald.*

LETTERS FROM THE COUSINS.

UNCLE MARK:—I am perhaps writing too soon, if so, lay my letter aside until the proper time to print it. I should not so soon have taken advantage of Uncle Mark's humorous welcome, if I had not wished to acknowledge the receipt of the Cuthbert Raspberries. I am greatly obliged to the sender. I was very much pleased with the compact manner in which they were prepared for mailing. They are nicely set out. It will not be the fault of the plants if they do not live for they had the best of roots. My house plants are not looking as nice now as they will a little later. I have a Calla in bloom The warm weather of a few days past, has caused me to miss the flowers more than I have before since they were cut off. The beautiful summer days would be far from perfect if they did not bring with them their floral offerings. I sought the other day for some of my pets that had braved the stinging breath of the previous days. I was rewarded by the sight of half a dozen saucy faces nodding at me from my Pansy bed. One, I think the most beautiful Pansy I ever saw, was a deep rich blue merging at the center almost into black. Beside the plants which I intend shall form a part of my enjoyment for the winter months, I have my canary. While I think of it I must tell of the wild birds that we have around us in summer. My mother and I have been in the habit of feeding them until they have come to consider their bread and cracker a right, and if it is not forthcoming they remind us of their presence by flying before the window. I must close now, hoping my letter is not too long.

New Bedford, Mass. CARNATION.

DEAR UNCLE MARK:—I have long wanted to join your Horticultural Club, before I knew you would take those beyond their teens, and I have only waited for a chance to write for the last three months. Will you accept me? I have five windows full of plants—most of them rare. The plants never did better than the past summer—nearly all were put out in the ground toward the last of May. Some of my Geraniums bloomed profusely; one, not over eight months old, of the La Neige variety, had from 17 to 20 trusses of flowers at a time. I cut back some of the older stocks of Geraniums, when I bring them in the house, and some sorts are still blooming very finely. I am acquainted with one of your members, little Frank Thatcher, who has a garden and home in Meeker Co. I visited him some months since, and was astonished to see that he had every weed pulled out of his garden, and took especial pride in keeping it clean, although he is but six years old. Please, can we ask Uncle Mark about our flowers and plants—especially their hardiness? If so, will he tell me if this Myrtle and Thyme, a sprig of which I enclose, are hardy enough for our Minnesota winters, with a little protection, out-of-doors? S. A. M.

Howard Lake, Minn.

You are welcome to join, but I cannot register your name till I get something more of it than the initials. The Thyme is hardy; the "Myrtle" I have some doubt about.—UNCLE MARK].

DEAR UNCLE MARK:—The prize book you so kindly offered came about two weeks ago. When I opened the package I was agreeably disappointed to find such an entertaining book. Please accept my warmest thanks. My father says he thinks Uncle Mark is a "brick," and if you should ever come to California we would be very glad to see you at our house. Southern California is so different from the East that we could show you a good many new and interesting sights. We live about a mile from a Spanish Mission over a hundred years old. There are Orange and Lemon groves, and very large vineyards reaching almost as far as one can see, and lovely canyons in the mountains where we have our picnics. We have beautiful flowers here all the year round. Thanking you once more, I am

Your sincere niece,

Los Angeles Co., Cal. GERTRUDE B. ADAMS.

[Thanks for your invitation, Gertrude, if I ever find myself in your neighborhood I shall be pleased to call.—U. M.]

DEAR UNCLE MARK:—We are but recent subscribers to the RURAL, but we like it ever so much. I should like to join the Horticultural Club if you will place my name upon the list. I have had a beautiful flower garden this summer, and we have a good many house plants. We have several fig trees. I have put one in the cellar, but have left the rest in the garden, do you think they will live through the winter? (No.) Yours truly

Jones Co., Iowa. EMMA. L. TUCKER.

Various.

BRIEFLETS.

ONE of our friends writes us that he fears the much-advertised, much-talked of English Magnum Bonum potato is more magnum than bonum. . . A distinguished lady writer of England thinks the very best food for young turkeys is *custard*. She makes it by beating up an egg in a cup of milk and baking it. . . All fruits—the most tender—must never stir in their boxes or barrels until removed from them. . . The best material for general packing is dry, soft moss. This is especially true for grapes. The steady pressure of the lid upon the elastic moss keeps every berry in place. . . Col. Curtis, in the N. Y. Tribune, says that old farmers have reason to smile at the vaunted discovery which a noted seedsman has recently made, that perfect success in growing seeds and plants lies in "firming" the soil.—This is rather disrespectful, Colonel. You are not old enough yourself to talk in that way. . . Montana is now the best place for old maids, cooks, and house-servants generally. . . The International Dairy Fair's $10,000 worth of premiums ought, of itself, to excite a deal of interest. T. M. Seaver, of 309 Greenwich Street, is the Superintendent, and of him all particulars can be gleaned. . . Keep the temperature of the root or fruit cellar just above freezing. . . Compost the muck with lime. . . Read, think and plan for another year. . . Put on a bright face, and make your family happy for the holidays. . . It is impossible for house-plants to do well, if the earth about them remains wet for any considerable length of time—say two days. Plants need *fresh* water the same as individuals. Let the earth be so porous and the drainage so complete that the plants will *need* watering daily. . . Readers are respectfully reminded that the RURAL NEW-YORKER is *invariably discontinued* at the end of the subscription term. . . We read in not less than twenty-five journals that their Premium Lists offer "the most valuable collection of articles ever before offered by any other journal in the world." . . We cannot say so much for ours. BUT, in so far as we can judge from what we have *seen*, it is as valuable as *any* of them. Send for it and judge for yourself. . . The one thing essential to the success of the proposed "National Agricultural Society," is to make it appear that Agriculture is the thing to be benefited. The trouble is to select officers that care more for agriculture than for the hobbies so many love to ride. So soon as it appears that anybody is grinding his own axe, both axe and individual should be cast out. . . The use for which the blank form upon our last page may be put, will readily suggest itself to all intelligent readers. . . The RURAL NEW-YORKER will prove, we are confident, a useful present to any friend, and it will be adequately prized at the end of the year, if not at the beginning. This will entitle the recipient to a share in all of our plant and seed distributions, and the giver to our best thanks. The paper will be sent from now until 1881 for $2.00. . . The Dutchess Farmer says:—"If farmers would plan recreation for their wives and families, they would remove one cause of gloom and sickness from their houses." . . In those parts of the country where the ground is still very dry, it would be well to mulch evergreens. The season of 1873-'4 will be remembered as peculiarly destructive to them, and the ground was then, as now—dry. . . Dr. Hoskins would like to see farmers' sons taught the principles of finance, as a protection against usurers and speculators, and of political economy, as a shield against the treachery of representatives and schemes of monopolizers. . . Mr. Wood, of Wisconsin, says that if a man wants a farm, he had better go right into the midst of a prairie country where there is not a tree; better go and take his farm there and plant trees, rather than go into a heavy timber country and hew out his farm. . . Mr. Welsher says that there is not a spring bursting from one of our thousands of hill-sides, which is not capable of supporting hundreds of speckled trout, with a small outlay in the construction of ponds. . . What constitutes "a disgrace to journalism" is a question before the London courts. It would be a hard question to settle in this country. . . The Cincinnati Enquirer, speaking of killing a hog, says: "Reader, for a moment put yourself in his place." . . The Boston Journal says that nowadays farmers may raise high-grade colts with profit, because there is a demand for them *while they are very young*. . . Frosted bits pain and injure horses' mouths on wintry mornings. Warm the bits, therefore, before using them. Rubber instead of iron bits are coming into use in cold weather. . . You can now commence to prune fruit trees and grape-vines whenever the weather is pleasant. . . How cheerful a few fragrant Pinks, Violets and Monthly Roses now are! . . Electricity was used to transport motion for one and a half mile in France. The motive power was strong enough to run a thrashing machine. . . Large quantities of California grapes have been sold in Eastern cities for twenty to twenty-five cents per pound. . . . The wood of the so-much-hated Ailantus is strong, durable and susceptible of a fine polish.

There's trouble among the millers and dwellers at Maxwell City and along the James River, Dakota. The people of the James River Valley built dams and mills for grinding their wheat; but lately a party of speculators, higher up the river, have shut off the water, and the mills stand idle without motive power, while the neighboring people have to go to Yankton, sometimes from a distance of 75 miles, to get their flour for family use. There's rough talk out there of destroying the Lake dam, which holds the needed water above. Surely there should be some legal remedy for such selfish injustice as those speculators have been guilty of. . . . The Millers' International Exposition will open a fine show at the Industrial Exposition Building, Cincinnati, Ohio, on June 1st, 1880, lasting two weeks. . . . The cotton mills of Augusta, Ga., pay a dividend of 28 per cent. on a capital of $900,000. . . . The Penn. R. R Co. are about to erect a mammoth grain elevator in Jersey City, at a cost of half a million dollars. It will be capable of cleaning 6,000 bushels per hour, and will be ready for use by next August. . . . The Canadian railroad lines from Detroit to Suspension Bridge have felt severely the stoppage of American cattle transportation through the Dominion, and now ask permission to carry cattle between the two points in sealed cars, no animal to be landed in Canada, and the cars to be used exclusively for that purpose. . . . Bad crops in some parts of Germany have already produced a famine in Upper Silesia where in many of the villages one-third of the people are reported to be starving. Among the peasants and weavers in Saxony famine has also made its ghastly appearance. . . . Out of the 30 costly grist mills of which Rochester N. Y. once boasted, 13 only are now running, 15 of them being now used as manufactories of machinery, while two have been burnt. . . . A perfect fruit famine prevails in the Grecian Archipelago. Rhodes which used to export 100 ship-loads of fruit, now imports lemons from Candia, while oranges have been annually diminishing with the rainfall. . . . The Short-horn breeders of Ky., at a meeting in Lexington, Nov. 25, resolved to purchase the copyright of the Short-horn Record from the estate of the late Major Evans. Subscriptions to the necessary amount—$5,000—have been collected. . . . An outbreak of pleuro-pneumonia has just occured in Monmouthshire, England. . . . The rinderpest in Russian Poland continues to extend and the establishment of a military cordon on the frontier by the Russian authorities may be shortly expected. . . . The vineyards of Malaga, Spain covering an area of 20,660 hectares (about 74,000 acres) have been attacked by the phylloxera. The pest is increasing in Gerona and Calalonia. . . . The N. Y. State Dairymen's Association will hold its annual convention at Onconta on Dec. 16, 17, 18. Papers will be read from Prof. L. B. Arnold, Rochester; John S. Shattuck, Norwich; F. R. Gilbert, Stamford; Fred. I. Evans, of this city; M. S. Wilcox, Jefferson; S. Hoxie, Whitestown; and others. Those attending the meeting can obtain reduced rates of fare from the following railroads: return for one cent a mile on the Delaware and Hudson River Canal Co., and return free on the Delaware, Lackawana and Western R. R., Utica and Chenango, and Rome, and Clinton Divisions. . . . The Dairy Exhibition in this city opens to-day, (Dec. 8th,) at the American Institute Building, 3rd Avenue and 63rd Street and will continue open two weeks.

PERSONAL ITEMS.

Mark Twain is 44.

Bancroft says he keeps in good health by being busy.

San Francisco has fined Kearney for carrying concealed weapons.

In Brazil photographs of Charles Francis Adams are used for making artificial ice.

San Francisco Kearney is said to have become a bloated, "leacherous" capitalist by stock speculations.

Abraham Lincoln's mother, Nancy, died in her husband's cabin in Carter township, Indiana, last October.

Mrs. Gladstone, the ex-Premier's wife, is one of the most charitable women in Europe, and is personally known to nearly all the poor in London.

New babies have conferred the honor of grandfatherhood this fall upon Longfellow, Tennyson and Bismarck, and a host of other old fellows.

Kossuth is no longer a Hungarian citizen. The Chamber of Deputies have adopted a bill declaring that any native who lives out of the country for ten years shall lose his civil status.

Mrs. Parnell, mother of the Irish agitator, is generally regarded as the leading lady operator in Wall Street. Parnell has "sisters, cousins and aunts" and a brother or so in this country also.

W. H. Vanderbilt is now the largest single holder of United States bonds in the world, having just registered $5,000,000 worth, purchased by the proceeds of his late sale of New York Central Railroad stock.

On being complimented, the other day, on the receipt of some handsome bouquets placed on his desk in the Senate, Thurman smilingly remarked, "Oh, yes; some kind friends have sent these to decorate my official coffin."

Five of New York's millionaires, estimated to have been worth three hundred and eight million dollars, dropped off close together. John Jacob Astor went first, and then in quick succession Commodore Vanderbilt, A. T. Stewart and William C. Rhinelander, and now the money worshipper, Goelet. Astor's wealth was estimated at $50,000,000, Vanderbilt's at $100,000,000 and Stewart's about the same. Rhinelander's property represented, it is supposed, $10,000,000 and Goelet's at $20,000,000.

Far, far better for you than Beer, Ale or Porter, and free from the intoxicating effects, are Hop Bitters.

Implements and Machinery.

PRONOUNCED
the
BEST PLOW MADE
by the
Northern Ohio Fair of 1879,
State Fair of New York of 1879,
State Fair of Michigan of 1879,
and by the
Paris Exposition of 1878
when it competed with 187 other PLOWS, and received the GRAND GOLD MEDAL for being the BEST general purpose Plow in the world—an honor never before conferred upon a Hand Plow.)

Is the MOST EASILY ADJUSTED and MOST PERFECT SCOURING PLOW ever invented, and the thousands that are in satisfactory use all over the land demonstrate the fact that no other CHILLED PLOW manufactured is equal in EVERY RESPECT to the "GALE."

THE MACKINNON PEN.
An Entirely New Writing Instrument for Desk or Pocket.

Writes seventy-five pages of foolscap with one filling, on any paper, with any clean writing or copying ink.
THE POINT is as smooth as diamond can be polished, is conical in shape, and glides over the paper as easily as a soft lead pencil.

CLEANLINESS.
It **cannot blot** or soil the hands, because ink cannot escape, except in the act of writing, and when not in use the pen is HERMETICALLY SEALED.

DURABILITY, CHEAPNESS.
Report No. 1135 of the Franklin Institute of Philadelphia reads: "The point of the Pen is ACTUALLY A RING OF IRIDIUM (diamond). . . . . It is at once tasteful and useful, and for the service rendered is NOT COSTLY. We cordially appprove of the instrument." The *Scientific American* says: "Our daily use of it demonstrates to us that whoever supplies himself with a MacKinnon Pen possesses a good thing."

NOTHING MORE APPROPRIATE AS A
HOLIDAY GIFT
TO A LADY OR GENTLEMAN

☞ Be careful our Name is stamped on every Pen, as there is a Cheap Imitation in the Market.

All who wish to avoid the annoyances of the common writing materials should examine the "MACKINNON PEN" at their stationers, or address the manufacturers,

D. MACKINNON & CO.,
200 Broadway, N. Y.

☞ All persons owning one of our Pens of the first manufacture should send it to us by registered mail, to be made over with all the late improvements, which will be done at manufacturers' price, and warranted for three years.

EPISODE IN CENTRAL PARK.

WHEN eggs are scarce, it is simply aggravating to see so many hens standing around doing nothing

AN idiot who lives near Lowville, and who signs himself "Nature's Poet," sends us three foolscap pages of jingle, beginning "The forests are fretted with golden fire." All right let 'em fret.

LITTLE BILLY has been taken to see his old uncle, who is so deaf that he cannot hear a word without recourse to his ear-trumpet. Billy watches the movements of this instrument for some time with great interest, and then exclaims: "Mamma, what does uncle try all the time to play the horn with his ear for, when he can't make it go?"

Rouse Up

The liver if it is dormant, and avoid a train of evils which must otherwise ensue. Among anti-bilious medicines none rank so high as Hostetter's Stomach Bitters. It speedily banishes those pains in the region of the affected organ, the yellowness of the skin, nausea, vertigo and sick headache, which attend a bilious attack. A bilious subject, after a brief course of this capital liver stimulant and invigorant, finds that his tongue is no longer furred in the morning, his breath is grown sweeter, a hundred inexplicable sensations no longer make his life miserable, his bowels have acquired the steadiness of a well regulated piece of mechanism, and he can eat with a hearty appetite and good digestion. It is because the bitters assist nature in her efforts to bring back the disordered liver and bowels to their normal condition, that it accomplishes such remarkable cures.

ESTABLISHED 1864. C. GILBERT'S STARCHES ARE ABSOLUTELY PURE.

The only Mill that will grind Corn with Shuck on without extra expense. The only Mill grinding Corn and Cob successfully that will grind Shelled Corn fine enough for family use.
Grinds twice as fast as any other Mill of same size and price. Manufactured by
J. A. FIELD, SON & CO.
922 N. 2d St., St. Louis

Monarch Corn and Cob Mill.
WARRANTED
Superior to any in use for all purposes. Will grind faster, run lighter and wear longer than any other.
CORN SHELLERS and FEED CUTTERS all sizes.
Send for Circulars
WHITMAN AG'L CO.,
MANUFACTURERS,
St. Louis, Mo.

A GOOD SAW MILL
For $200.
Our No. 1 Plantation Saw Mill is designed to be run by 8, 10 or 12 horse-power Agricultural Engines. With this power from
1,500 to 4,000 Feet
of lumber can be cut in a day. A product 25 to 50 per cent greater than can be cut with any reciprocating saw mill. The mills are complete except saw, and will be put on the cars in Cincinnati for the low price of $200, and warranted in every particular. Saw Mills of all sizes, Engines and Boilers, Shafting, Gearing, etc.
Illustrated circulars sent free.

ANNOUNCEMENT OF THE
YOUTH'S COMPANION
1880
INCREASED IN SIZE

ILLUSTRATED BY THE BEST ARTISTS

COMES EVERY WEEK

$1.75 A YEAR.

IN ENTERING upon its Fifty-third Year, the YOUTH'S COMPANION fully recognizes the fact that the times demand the highest standard of popular literature. The following Announcements indicate that the Volume for 1880 cannot fail to reach this standard.

The variety and worth of its contents will make it a repository of the choicest literature; a library of tales, travels, adventure, history and biography; a "Companion" for the study and the fireside, for the older as well as the younger members of the family.

Special Stories.

A Serial Story, by - - - Harriet Beecher Stowe.
"His Little Mother," a Serial, by - Dinah Mulock Craik.
A Serial Story for Boys, by - - - J. T. Trowbridge.
A Story of Southern Life, by - - Marie B. Williams.
A Tale of Cumberland Mountains, by - Charles Craddock.

Stories of Adventure, by

Capt. E. Frechette, Fred. A. Ober,
Charles Craddock, Mrs. H. B. King,
C. A. Stephens, Charles H. Eden.

Stories for Girls, by

Louise Chandler Moulton, Julia Eastman,
Mary A. Denison, Sarah Winter Kellogg,
Harriet Prescott Spofford, "Marion Harland."

More than Two Hundred Short Stories.

Harriet Beecher Stowe, Charlotte Mary Yonge, J. T. Trowbridge,
Rose Terry Cooke, Charles Craddock, "Marion Harland,"
A. H. Leonowens, Georgiana M. Craik, "C. M. Cornwall,"
Louisa M. Alcott, J. D. Chaplin, Frances M. Peard,
Rebecca Harding Davis, Sarah O. Jewett, Ruth Chesterfield.

Valuable Papers, by

Dr. Henry I. Bowditch, - On Prevention of Consumption.
Dr. H. W. Williams, - - - On Near-Sightedness.
Dr. D. F. Lincoln, - - - On Hygiene for Scholars.
George E. Waring, Jr., - - - - On Ventilation.

Foreign Letters, by

Edward M. King, Charles Barnard,
Louise Chandler Moulton, Mrs. John Lillie.

Brilliant Sketches, on

Eminent Orators, by - - - - James T. Fields.
The Home Life of Statesmen, by - - James Parton.
Recollections of Eminent Men, by - Ray Palmer, D. D.
College Days of T. B. Macaulay, Daniel Webster, Charles Sumner, Nathaniel Hawthorne, Edward Everett, by Edwin P. Whipple. George P. Lathrop. Wm. Everett, LL. D.

Short Religious Articles, by

Rev. Ray Palmer, D. D.,
Rev. Theodore L. Cuyler, D. D.,
Rev. A. C. Thompson, D. D.,
Rev. Theron Brown.

Practical Articles.

Out-of-Door Work for Girls, Miss A. B. Harris.
Advice upon Courses of Reading, Rev. Edward E. Hale.
How to Make Cheap Tours to Europe, - Edward M. King.
History of Great Enterprises, - - James Parton.
Home-reading in the West, - Ex-Gov. Elder, of Kansas.
Stock-Raising in the West, - - - Frank Wilkeson.
Mechanics for Boys, - - - Charles Barnard.

Every-Day Facts in Common Law, by

Hon. Charles Theodore Russell.—Showing how to Convey Land—Serve a Writ—Make a Will—About the Prosecution of Crimes—etc.

Poems.

Henry W. Longfellow, Edgar Fawcett, John G. Whittier,
Edna Dean Proctor, Lucy Larcom, Mr. and Mrs. Piatt,
James T. Fields, J. T. Trowbridge, Paul H. Hayne.
Sidney Lanier. Nora Perry, Julia C. R. Dorr.

Editorial Department.

The articles on the Editorial Pages will be prepared by the most qualified pens. They will present, in a clear, succinct way, explanations of the meaning, and views of the progress, of most of the prominent topics and events of the year,—moral, political, literary and scientific.

SPECIAL OFFER.

To any one who subscribes now, and sends us $1.75 we will send the Companion free to January 1st., and a full year's subscription from that date.

Subscription Price, $1 75. Specimen copies sent free.
Please mention in what paper you read this advertisement. Address

Publishers Youth's Companion,
41 Temple Place, Boston, Mass.

THE RURAL NEW-YORKER

A JOURNAL FOR THE SUBURBAN AND COUNTRY HOME

VOL. XXXVIII. No. 51.
WHOLE No. 1560.

NEW YORK, DEC. 20, 1879.

PRICE FIVE CENTS.
$2.00 PER YEAR.

THE SOUTHERN COW "PEA."—DOLICHOS SINENSIS (?)

Field Crops.

THE SOUTHERN COW PEA.

DOCTOR A. R. LEDOUX, DIRECTOR OF NORTH CAROLINA AGRICULTURAL EXPERIMENT STATION.

THE history of the Southern Cow Pea is involved in obscurity, and the oldest and best of our farmers are divided in their opinions as to its origin. Some claim that it is indigenous to the soil, having been found growing in luxuriance over our savannahs and upland meadows when first the white man traversed the fertile plains of North Carolina. Others hold that it was introduced by the incoming colonists; while still a third party have suggested that the seed was brought from Africa with the slaves as a cheap and nourishing food on the voyage. I am at present endeavoring to trace the "Pea" to its source. So far, I am led to believe that it was introduced by the French or Spanish, and that its culture has gradually extended northward from Florida or Louisiana.

The name "Cow Pea" is calculated to deceive. It is not a pea, and has no relation to the English or garden pea—Pisum. Its botanical status, strange to say, has never been fully established. Its merits have been unwritten, except in local newspapers, or but casually mentioned in agricultural works. It has held its name, and extended its area of cultivation, solely by its intrinsic worth. The Southern farmer has found in it a nourishing food for his family, the best food for his stock, an easily cultivated renovator of his worn-out soils, and a sure weed-destroyer. The large number of varieties unquestionably belong to the genus Dolichos or to "Vigna," as our modern botanists prefer to class it, of which over 60 species are described in Don's "General History of Dichlamydeous Plants." It is an annual, the seed ripening from July to September, according to location and species. The number of varieties is legion, since all the species hybridize with the utmost ease, and the new varieties resulting from the cross, will perpetuate themselves with constant characteristics obtained from each of the original species. No less than 20 varieties are distinctly recognized, and have obtained popular names derived from association, color, or some other individual characteristic. That they can all be referred to the Dolichos Sinensis of Linnæus or the modern Vigna Sinensis, is a very doubtful assertion.

The following are among the common names existing in various localities: "Yellow Pea," "Black Pea," "Black Eye," "Crowder," "Sugar Crowder," "Clay-bank," "Clay," "Red Cow," "Ripper," "Brown Eye," "Field," "Long-pod," "Yard," "Java," "Speckled," "Whip-poor-will," "Shiuy," etc., etc. The varieties best known are the followiug:

(1). "Whip-poor-will" or "Speckled;" small, speckled (like the bird); makes little vine.

(2). "Clay" or "Crowder"—clay-color, largest of all, not prolific and hard to raise. Named from color and from the crowded position of the seeds in the pod.

(3). "Black Pea," chiefly used for green manuring and hay. Has enormous vines. The seed is not esteemed as food.

(4). The "Lady Pea," small, variegated, the most esteemed for table use.

(5). "Black-eyed Pea," grown for food; makes good hay also. These are the principal varieties grown in North Carolina, but they so run into and cross with each other, that new varieties constantly come forward with special claims.

They have no tendrils like the pea proper, but twine like beans, running on their own foliage.

The cultivation of the Cow Pea varies according to the purpose for which it is grown—whether for food for man, beast or hungry soil—from no cultivation at all to the use of the drill and cultivator. When planted to renovate worn-out land, they are usually harrowed into well-broken ground and left to themselves. The Black and Speckled peas are preferred for this purpose. Some, more painstaking, drill them in rows, two feet apart, and plow once, when a few inches high. Then, left to themselves, they will soon destroy even the most hardy weeds, such as the thistle, ragweed, etc., and, in three months' time, an astonishing mass of vegetable matter, rich in plant-food, will be ready to be turned under. This is usually done, when the pods begin to ripen, with a large two-horse plow with sharp rolling coulter, preceded by a roller, or heavy chain attached to the doubletree to hold the vines down. The crops grown upon the poor, sandy lands of the tide-water belt of the South, after one turning under of a growth of "pea vines," are the astonishment of Northern farmers. Some planters apply lime to the soil before plowing under the vines, especially upon land inclining to acidity. When planted for food, they are simply dropped among the corn in hills about five feet apart. For feeding cattle, sheep or hogs, they are usually sown in rows with the corn, allowing the former to get a start before sowing the latter. After the fodder is "pulled," and the corn secured, the stock are turned in and fatten upon the vines, of which they are very fond. To preserve the vines for winter hay, some experience is necessary. If dried too much or too rapidly, the leaves fall off and are lost. If put up too green, they heat, ferment, and are ruined. Properly cured, they are a very valuable addition to our winter hays.

As most RURAL readers have, doubtless, never seen the analyses of the "Cow-Pea," I will append them, trusting that some Northern farmer may be induced to make a trial of the crop, and prove to be true, what *I firmly believe*, that *some varieties* of this valuable plant will thrive and ripen seeds in the Middle States. If so, then will the agriculture of sandy Long Island, of Connecticut, Central New York and New Jersey, receive an impetus that will be surprising. The outlay for commercial manures will be materially lessened, and, *once understood*, the "Cow-Pea" will maintain a hold on the intelligent Northern farmer, second only (if at all) to clover.

SAMPLES OF BLACK COW PEA.
Analysis—Fresh Seeds.

	PER CT.	
Moisture	20.85	
Ash	2.94	PER CT.
Albuminoids	20.08	Containing Ammonia, 3.89
Cellulose	4.34	
Fat	1.28	
Carbohydrates	50.51	
	100.00	

SAMPLE OF YELLOW COW PEA.
Analysis—Fresh Seeds.

	PER CT.	
Water	19.20	
Ash	3.31	PER CT.
Albuminoids	23.02	Containing Ammonia, 4.46
Cellulose	5.03	
Fat	1.37	
Carbohydrates	48.07	
	100.00	

Analysis—Water-free Seeds.

	PER CT.	
Ash	4.10	PER CT.
Albuminoids	28.50	Containing Ammonia, 5.52
Cellulose	6.23	
Fat	1.68	
Carbohydrates	59.49	
	100.00	

ANALYSIS OF THE ASH OF YELLOW SEEDS.

Ash	3.31 per cent.
Potash	30.16 "
Soda	11.71 "
Magnesia	6.16 "
Lime	4.84 "
Phosphoric Acid	30.06 "
Sulphuric Acid	3.13 "
Silica	1.65 "
Chlorine	0.35 "
Oxide of Iron	0.39 "
Carbonic Acid	8.10 "

COMPOSITION OF ASH.
With Silica and Carbonic Acid, Deducted.

Potash	33.42 per cent.
Soda	12.99 "
Magnesia	6.83 "
Lime	5.36 "
Phosphoric Acid	33.30 "
Sulphuric Acid	3.69 "
Chlorine	0.39 "
Oxide Iron	0.43 "

From these analyses we can see that the composition of the fresh seeds of the yellow variety is as follows, in 1,000 parts:

	PARTS.	
Water	192.00	
Potash	10.08	
Soda	3.98	
Magnesia	2.14	
Lime	1.78	
Phosphoric Acid	10.05	
Sulphuric Acid	1.09	
Silica	0.65	
Oxide of Iron	0.23	
Chlorine	0.22	
Carbonic Acid	2.88	
Albuminoids	230.20	Containing Ammonia, 44.61
Cellulose	50.30	
Fat	13.70	
Carbohydrates	490.70	
	1,000.00	

ANALYSIS OF ASH.
With Silica and Carbonic Acid Deducted.

Potash	18.68 per cent.
Soda	29.40 "
Magnesia	8.51 "
Lime	28.49 "
Phosphoric Acid	11.71 "
Sulphuric Acid	2.97 "
Chlorine	0.24 "
	100.00

1,000 pounds of the fresh vines will contain as follows:

	LBS.	
Water	728.10	
Potash	2.96	
Soda	4.66	
Magnesia	1.35	
Lime	4.51	
Phosphoric Acid	1.86	
Sulphuric Acid	0.47	
Silica	0.21	
Oxide of Iron	....	
Chlorine	0.04	
Carbonic Acid	3.94	
Albuminoids	18.50	Containing Ammonia, 3.56
Cellulose	152.70	
Fat	2.10	
Carbohydrates	78.60	
	1,000.00	

The value of the Cow Pea as an article of food, and of the vines for feeding and fertilizing purposes, will best be shown by a comparison with seeds and grains of well-known, standard qualities.

TABLE I,

Showing comparative composition of certain grains and seeds, calculated to *water-free substances* for uniformity:

	Ash.	Albuminoids.	Crude fiber.	Carbohydrates.	Fat.
Cow Pea, Black	3.72	25.37	5.48	63.81	1.62
Cow Pea, Yellow	4.10	28.50	6.23	59.49	1.68
Maize (Corn) Kernel	1.66	12.76	2.53	77.37	5.68
Field Beans	4.00	29.94	13.45	53.21	2.33
Garden Peas	2.91	26.13	10.73	61.02	2.91
Wheat	2.53	15.18	3.50	78.97	0.58
Acorns	2.21	4.54	10.20	82.95	5.22

From this comparison we can readily locate the Cow Pea in its proper place as a feeding stuff. Taking the nutritive ratio of the bean as the unit, the other substances will come in the following order: 1, Field Bean; 2, Yellow Cow Pea; 3, Black Cow Pea; 4, Garden (English) Pea; 5, Wheat; 6, Maize; 7, Acorn. The garden pea and the bean being the most nutritious vegetables, weight for weight, we see how near the Cow Pea approaches to these as a food for man or beast, and how high it stands in the scale of value.

Last spring our friend, Mr. M. B. Prince, of North Carolina, was kind enough to send us a small box of the Southern Cow Peas In it were many different varieties from the size of small peas to that of bush beans. In color they were white, cream, brown, red, purple, mottled, &c., with variously colored eyes. Of the entire collection, we planted six kinds described by Mr. Prince as Clay-Colored, Black-eyed, Black, Crowder, Lady Finger and Red. As these plants cross very readily and different varieties result every season, such names can be of little value. They were planted in a row 50 feet in length about the middle of May. They germinated freely and grew rapidly. About the 1st of June a frost occurred which injured bush beans growing near. Corn was also injured—but the Cow Peas were not. Our engraving is that of the variety sent as "Crowder." The size, form and color of the leaves and fruits of the several varieties differ, but all made an immense growth of vines which after attaining a hight of nearly two feet spread out on either side, covering the ground five feet in width. This we are aware is not in accordance with Prof. Ledoux's statement that some varieties make "little vine." That most of the above varieties will "thrive and ripen seeds in the Middle States" there can no longer be any doubt.

COW PEAS IN TEXAS.

G. MARTI.

THE common name of Cow Peas is given in general to a large genus of plants, the Dolichos, which are closely related to our common garden beans. There are a good many species, varieties and sub-varieties of this vegetable, differing widely in the style and hight of growth, form of pods and the color of flowers and beans. They are extensively cultivated for home consumption in warm climates, as Algiers, Egypt, Spain, the southern part of France and, to some extent, in our Southern States. Several efforts to introduce them in the Northern parts of France and Germany resulted in failure; the climate was found to be too cold and the summers too short for them to ripen their pods. The Cow Pea is a tender vegetable and warmth is one of its chief requirements in order to make a robust growth.

It is very productive, especially the dwarf and half-climbing or trailing kinds. The coarser red and seeded sorts cooked, make a substantial feed for hogs. It is said that fed to cows in the same manner, it increases the flow of milk greatly, though it impairs the quality of the butter. The pods may be used as snaps in their tender state, and, though of a rather peculiar and strong taste, they are a welcome dish at a time when the scarcity of other green vegetables is keenly felt on the Southern farmer's table. Exclusively for this last purpose, the Long-podded yard bean (Dolichos sesquipedalis) is planted, as it is too scant in seeds and the few there are, are too meager and inferior to make it a good and prolific sheller. For a shell-pea for human food, the Black-eyed Ladies' or Bird's-foot Pea, (D. unquiculatus) is considered the best among the cow pea family, and it is the only one that is brought to market and sold there on vegetable-stands either shelled or in pods in a half-ripe state. It is very prolific: the pods are well filled, the beans plump, of a whitish color with a black eye. They make an excellent dish.

All kinds of stock devour the luxuriant herbage of the different sorts of Cow Peas greedily, though, in this case, the same precautions have to be observed as in feeding young clover. Dried, the vines make a good hay of great substance. The Cow Pea is highly recommended for plowing under in a green state, in order to supply vegetable mold to old and worn-out fields. The climbing kinds sown broadcast and left trailing on the ground, will form such an entangled mass of foliage as to smother out some of the most obnoxious and tenacious weeds, and leave the ground in a moldy, fine condition for after-tillage. Not very long ago a market gardener in this vicinity, who has the misfortune to have his field infested with Coco or Nut-grass—from one corner to the other, triumphantly assured me that, at last, he had found the true means of getting rid of this pernicious pest by simply choking it out with Cow Peas. This assertion however,—knowing a little of the tenacity of life of this hydra, the Nut grass, I take with many grains of salt until more fully convinced by his success.

The way in which cow peas are usually planted here is in the corn-fields as an after-catch. They are planted in rows after the second plowing. The dry corn-stalks, by the time the peas have grown up, serve them as supports or stakes. Broadcast, they are sown rather late in the spring and harrowed in. The harvest in this way, is often reported as from 20 to 40 bushels per acre. Though, preferring a sand loam, they are not particular as to the quality of the ground, so that it be not too wet. Last season a neighbor of mine raised a fine patch of Cow Peas with an abundance of well filled pods, in a field of a very heavy, tenacious and waxy clay soil. On the whole, the Cow Pea is cultivated far less than it deserves to be, in a climate fit for its growth. Perhaps not the least cause of its not being cultivated more extensively lies in the fact that the bean weevil infests it badly, especially the dark-seeded varieties. Not seldom does one put up his bag of apparently sound seed peas, to find them, at planting time, converted into a mass of dust and skins.

COW PEAS IN NORTH CAROLINA.

As one of the more important and special productions of the South, the Cow Pea receives less attention than it deserves. Though grown to a considerable extent in this State, it is usually compelled to take its chances as a catch crop among corn or as a fallow crop after wheat or oats, yet with a cleanly cultivated soil to start on, it never fails to pay the full principal with large interest on the investment. As a green crop for plowing under, it is considered fully equal to clover. Some accounts are current of land sown with wheat for several consecutive years, each successive yield being better than any previous one, no manure being used, except a crop of Cow Peas, sown immediately after the removal of the wheat, and plowed under in time for the next crop of wheat, Drilled in June and properly cultivated, they will be well matured by the first of October, and afford a fine start for the fattening hogs or cattle intended for beef. Giving them the range of the field saves all expense of harvesting, and but very little will be wasted. Mown when the seed is just forming, the vines make most excellent hay.

Dr. Ledoux in his analyses, ranks cow pea vines more nutritious than corn fodder, though inferior to timothy or clover, and the ripe Cow Peas he places second as compared to beans, garden peas, wheat, maize and acorns, beans holding the first position. I suppose the first analysis, that of the vines, to have been made before any seeds were formed or at least when free from all pods, from which we must see that fodder made from cow pea vines, when the peas are well formed, though not dry, must be much more valuable. M. B. P.

Warren Co., N. C.

COW PEAS AS A FODDER CROP.

HENRY STEWART.

FOR the Southern States nothing need be said in regard to the value of the Cow Pea. It is there so well known and so widely grown that its value is as well established as that of clover in the Northern States. But in the Middle and Northern States the Cow Pea is almost unknown. A few farmers only, ever on the alert to learn some new thing, have heard of the Cow Pea and have tried it. Fodder crops here are our most valuable ones, and the eagerness with which every newly introduced plant is welcomed and tried, from Prickley Comfrey upwards and downwards—if there is a downward from that atrocious humbug—is a proof that a greater variety of green or dried fodder is desired. Cow Peas, I feel confident, will become largely grown in the North, as soon as their value has been discovered. By the kindness of Prof. Blount, who sent me the seed, I was able to test a bushel the past season. The seed was sown in drills, 18 inches apart, in the same manner as our ordinary peas. This was a mistake, and 27 inches apart would have been better, as the vines will run and mat together closely at the latter distance. The soil was a very light sandy loam, had been in turnips the year before, and in rye cut green for fodder the present season. Last year 600 pounds of Mapes's complete manure had been used for the turnips and the present year no fertilizer was used. The peas were sown June 2d, and the dry warm weather of that month and the next seemed, to suit them well. The late season helped them to make a good growth, and in September early I commenced cutting them. There were no blossoms and the vines were thick, so that it was necessary to cut or "pull" them with a scythe as common peas are gathered into bunches. The cows eat them greedily and the milk came up at once, and kept up, from 75 to 83 lbs. at a milking to 92 to 98 pounds. This being more milk than I needed, the daily ration of meal was reduced one quart per cow, and the milk fell back then very little. The increase in the milk may have been due to the large quantity of peas consumed, as 14 cows (4 dry ones included) eat up

the whole acre in one week, besides a feed of green corn at noon. With better soil the yield might have been much heavier, but it amounted to at least as much as a fair crop of fodder corn. As to its nutritive qualities, the fact mentioned is satisfactory to me in a practical manner. For those who love figures I can give them the following analyses which show what Cow Peas ought to do in comparison with clover and fodder corn, our most common green fodder crops. The analysis of the Cow Peas is taken from the Agricultural Report, 1874, and that of fodder corn from the report of work done at the Connecticut Experiment Station by Prof. Atwater in 1878.

Composition of	Fresh.				Dry.			
	Water.	Organic Matter.	Ash.	Albuminoids.	Carbohydrates.	Cellulose.	Ash.	Fat.
Cow Peas	86.8	11.9	1.2	14.6	38.0	36.5	8.6	2.1
Red Clover	83.0	15.5	1.5	18.6	43.5	25.5	8.4	3.9
Fodder Corn	84.3	14.6	1.1	10.3	51.4	30.1	6.9	1.01

As might be expected from its leguminous character, the Cow Pea is richer in albuminoids than corn fodder; in practical use I think the peas considerably more valuable than green corn. Besides, the above analysis of Cow Peas was made when the plant had not blossomed and was immature; if it can be brought by forcing cultivation into a more mature condition, it might more nearly approach in value to red clover. It is a plant worth testing either for green fodder or for hay. It is one of a class of which we cannot have too many, and which will come in a succession after rye and that may be removed from the ground in time to plow and sow rye again; that is, when the rye is used for green fodder. In soiling it will come in at a most convenient season, when cows are getting tired of green corn.

Bergen Co., N. J.

EARLY AMBER CANE.

In a late RURAL under the heading of "What Others Say," I noticed a quotation from the Elmira "Husbandman," in which C. J. Reynolds is given a vast amount of credit and the Elmira Farmers' Club likewise for experiments conducted by others with Minnesota Early Amber cane. It may not be amiss to say that Mr. Reynolds was the first to introduce the subject of cane raising in this locality to the Corning Farmers' Club of which I have the honor to be secretary; but that the experiments were conducted under his *personal supervision* or that any especial pecuniary assistance was rendered by him in the enterprise I deny. Mr. Reynolds was merely the secretary of a stock company formed here for the purpose of testing this new industry, and was expected to report to us, so that we were surprised to find his first report coming indirectly through the RURAL.

For the benefit of RURAL readers I may say that, considering our limited advantages for testing it, Early Amber cane can be grown with profit by farmers as high as the 44th parallel for home consumption at least. Below I give a series of experiments with this variety of Sorghum, as reported at our Club meeting, Oct. 25th. The reader can readily see the possible results to be obtained, were a more practical effort made to obtain a larger growth. The first was that of Mr. Henry D. Smith. He says:

"My ground planted with cane measured 35 rods. I obtained 38 gallons of sirup at a density of 35°. The crop was in a measure injured by drought. It was certainly no more than three-fourths of a crop. The soil was gravelly and dry. In a moister season the result would have been decidedly better."

Geo. P. Nixon said: "My seed was planted May 27th, two and one half by three feet—one-eighth of an acre in all. I considered it only fair corn land. It was seriously affected by the drougth, of course: for corn near it on the same quality of soil was an inferior crop. The young cane grew slowly and would at first have discouraged the most sanguine cane grower, but when once started, the rapidity of its growth was astonishing. By actual measurement it made five inches in 24 hours. From the one-eighth of an acre I obtained 40 gallons of fine sirup, but it would probably be 30 gallons if reduced to the proper density for sugar—14 pounds to the gallon."

S. G. Hay reported: "I had only 20 rods of ground planted to cane. It was seriously injured both by drougth and wire-worms. It was not more than three-fourths of a crop, yet I extracted 13 gallons of fine sirup."

R. L. Potter: "My experience with cane was on green, damp bottom land, It received but little care and came up badly making a poor stand. I planted 60 rods, or three-eighths of an acre, and extracted 70 gallons of very thick sirup, most of it at a density of 40°."

S. H. Reed: "I only planted a piece 28 by 40 feet. The soil was very poor. No horse was used to cultivate it, and it was only hoed twice. The drought affected it badly, and although there were no missing hills, many of them were very small. It was not suckered, as it always should be, and gave an average of three stalks to the hill. I obtained six gallons of very thick sirup."

M. W. Robbins: "I planted one-eighth of an acre, three feet apart each way, making 600 hills. I used sod ground on a steep side-hill. Much of it failed to germinate. The average was about three stalks to the hill. Corn by the side of it on the same quality of soil was a scant half-crop. I received 21½ gallons of first-rate sirup."

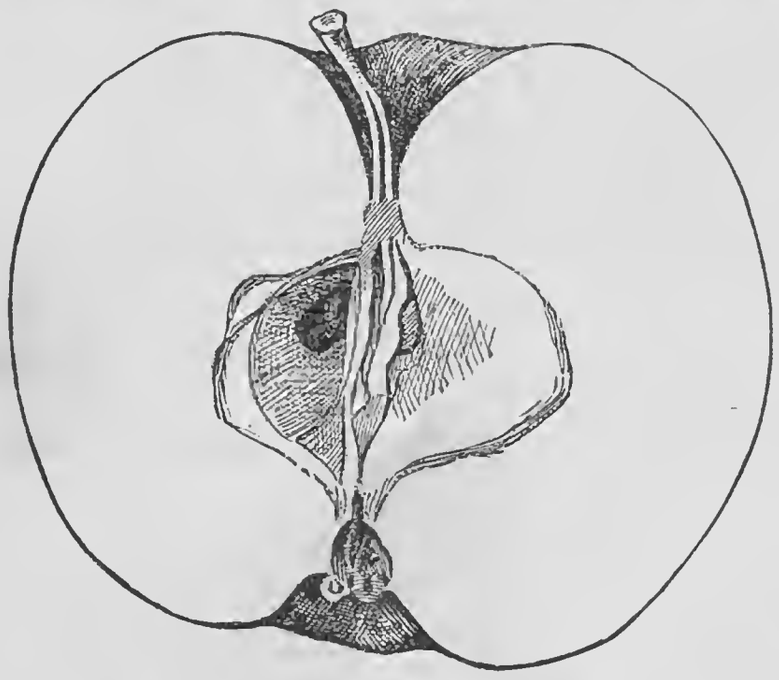
By the above—the real experiments of practical farmers—we see that the culture of Early Amber cane can be made profitable at least. Among these six men 170 gallons are the smallest rate of yield per acre. Estimating this at 25 cents per gallon, we have the sum of $42.50 from the product of an acre, and the past has been a most unfavorable season for conducting the experiment. From the first of July we have had scarcely any rain and what little fell was in small showers that did but little good to growing crops. A poor corn season is a poor cane season, and corn with us is a most inferior crop. Whether this product could be grown profitably for market remains to be learnt; but that farmers can grow their own sirup and sugar is a fact. Cane sirup forms sugar readily, not however without the aid of chemicals. The preparation manufactured by Dr. Stewart answers all the requirements of a crystalizing agent, and by its use sugar can readily be obtained.

In the culture of cane of this variety, no more care is required than for corn. It starts slowly at first, but grows rapidly. After the first hoeing, care should be taken to pack the earth down firmly about the seed, for without this precaution, much will fail to germinate. The suckers should be removed, for unripe cane is injurious to the sirup, and the suckers, of course, are not matured. A crusher suitable for the use of a neighborhood can be procured for $60 and the evaporating pans will not cost more than $10.

HECTOR BERTRAM.

A POTATO EXPERIENCE.

WHEN the Alpha potato was first introduced to the public, the writer, who had, a year or two before, had it from the originator, was



SECTION OF WEALTHY APPLE.—FROM LIFE.

offered so liberal a price for his stock of seed that he parted with all but half a peck of small, ill-shaped tubers. These he planted in his garden, and when he dug the crop he realized, as he never had done before, the truth of the saying, "Like produces like." The lesson was heeded, and only a dozen or so of the smoothest of these potatoes were preserved for seed. And now it has taken him four years of successive selections to bring back his stock of Alpha (the best of all early garden potatoes) to its original regularity of form and full size. I commend this experience of mine to those cultivators who believe that small potatoes are as good as any for seed. Though this may seem to be true in a single experiment, a continuance in planting small, imperfect seed will surely result in that "running out" of which we hear so much. I believe that potatoes will never "run out" where care is taken in the selection of seed and in the cultivation of the crop. The old Mercer, Chenango, Neshannock, or Philadelphia potato (I have known it under all these names), though little seen in market, is still grown by one farmer of my acquaintance in as great perfection as I knew it to possess forty years ago, when it was as standard a variety as the Early Rose now is.

T. H. HOSKINS, M. D.

Pomological.

THE WEALTHY APPLE.

"THE Wealthy Apple, as I have seen it for several years," Mr. Charles Downing writes us, "is a very promising variety for the amateur and for family use. It is over medium in size, very beautiful in appearance; flesh white, very tender, juicy, with a refreshing vinous flavor, and of excellent quality. This Apple originated with Peter M. Gideon, of Excelsior, Minnesota, who says the tree is very hardy, of vigorous growth, an early and abundant bearer."

Mr. Gideon tells the RURAL "The seed from which I grew the Wealthy, I procured from Albert Emerson, Bangor, Maine, some 16 years ago. It came labeled as Cherry Crab seed, and I think it was true to name, as shown by later acquaintance with the variety, and the fruit of seedlings raised therefrom. Though none of these were so large as the Wealthy, yet many were of fair size and of excellent quality. The original tree now stands where the seed was planted. It fruited seven years from seed, and is a profuse yearly bearer, various trees having to be propped up for three and four years in succession. Wood rather dark; a pretty strong grower, forming a handsome rather round-headed tree, as hardy, I believe, as any of the little Crabs, and it takes readily and smoothly on them as if on its own stock, and roots as readily from a layer as does a Currant.

WEALTHY APPLE.—FROM LIFE.

The first crop of fruit was shown at the State fair nine years ago, and at the same time a seedling Crab of my own growing. The one was pronounced by the judges to be the best apple on exhibition, and the other to be the best crab; but some of those running the fast-horse business had apples and crabs on exhibition, and to secure the prizes ruled mine out as seedlings, and divided the premiums among themselves. Perhaps it served me right, as the reward of keeping bad company—a sin not repeated since and certain not to be in future. Though I have raised many fine varieties of later origin, that I take pride and pleasure in exhibiting, yet no award could tempt me to put them on exhibition at a horse-racing carnival, to do homage to the most alluring evil that curses the agricultural fairs of the country."—[Good! EDS.]

The Vineyard.

THE LADY GRAPE.

MR. J. T. LOVETT, in remarking upon the Duchess Grape in the RURAL NEW-YORKER of Dec. 6, incidentally speaks of the Lady grape, and very properly alludes to the fact that it is "a poor keeper." I believe this is true of all the Concord class of grapes; but there is another peculiarity of the Lady grape, which to some extent neutralizes, or compensates for, its want of long-keeping. Although it will not keep very long in good condition after being gathered, it will hang upon the vine, even after being fully ripe, for many weeks without falling from the cluster, without decay, and without loss of flavor or quality. Ripening in August, before any other good grape, its principal value will be for early and near-by market and for home use. Its thin skin and delicate character will render it, like the Concord, unsuited to distant shipment, except with very careful handling. But I have several times covered the grapes with a net to protect them from birds, and had them remain upon the vines in good condition until we had severe frosts in October.

Another apparent fault of the Lady vine I am confident will be more than compensated for by time and patience, those who have had but two or three years' experience regard it as a weak or slow grower. This is, I believe, usually true with young plants; but the Lady vine makes, from the first, very large and abundant roots, in proportion to the top, apparently laying a solid foundation for future vigor and usefulness; and although it makes rather a small growth for the first two or three years, it has been, with me, steadily progressive—never going back, but increasing in vigor each succeeding year. The fruit also as regularly increases in size of the clusters, as well as in productiveness; and the growth of all my older vines has been, the past season, all I could ask or wish, and fully equal to Concords in their best estate. I am confident, from its hardy and healthy character, and from its gradual and constant improvement, it will be one of the most permanent and long-lived vines in cultivation.

By contrast, I have found, after many years of experience, that some vines, which make an immediate and very rapid growth at first, after a few years begin to decline, and, instead of progressing, gradually become weaker and eventually become unfruitful, and finally die outright. This has been the case with several of the "Hybrid" varieties.

Delaware Co., O. G. W. CAMPBELL.

Horticultural.

OUR RASPBERRY PATCH.

IT covers about thirty square rods of ground. From it we used all we could in our family during the season, then sold surplus berries to the amount of $50, the prices averaging 10 cents per quart. They were carried 10 miles to market on a spring wagon without injury, and were pronounced just splendid by our customers. Those who buy them one year are sure to want more the next. There is real satisfaction in selling something that everybody wants.

With us, the Philadelphia ranks among raspberries where the Wilson does among strawberries. It is the berry for the people, being hardy, a good bearer—bearing a full crop every year—and the fruit is a good berry; we know of no better. This year the fruit commenced ripening about the time the Black Caps were going, giving us fresh fruit every day for about four weeks.

We plant in rows about eight feet apart, and from three to four feet in the row, so that the cultivator and plow can be run one way. We make the land rich and give good cultivation early in the season. We do our pruning in the spring, cleaning out all dead and weak canes, leaving from four to six canes to a hill, cutting those back about one-third. Really, our hills mostly run together after the second year, making a continuous row one way.

We prefer to do our pruning in the spring for the reason that our bushes then stand the winter better, and we have a better chance to select the best canes. In making new planta-

tions, we have lately adopted the plan of using suckers of the present year's growth, setting them in May or June, using two or three strong plants for a hill. If carefully set, they will make a fine growth, and be ready for bearing the next season. J. R.

AN IDEA.

I DO not know that it is new, but think it good—the plan of setting apple trees among Raspberries or other small-fruit bushes, the bushes serving as a protection for the trees against the summer's sun and heat, and also against the winter's cold and wind. I find that the trees, as they grow larger, are no disadvantage to the bushes. I know that those trees set among my Raspberry bushes look healthier, are more thrifty and have made a better growth than those set at the same time and receiving the same care and cultivation in the open ground. I set a row of trees in about every fourth row of Raspberries, they being about eight feet apart. Then, as the bushes grow and fill up the rows, they serve to still further protect the trees from the plow and whiffletrees. Those who have had young trees "barked" by a careless plowman, will appreciate this point. The bushes should not be allowed to crowd the trees while young; as they grow older they will look out for themselves. JOHN RUSTICUS.

Outagamie Co., Wis.

Farm Topics.

NOTES FROM THE RURAL FARM.

Corn Fertilization.

MANY will say, when we publish our premium reports, that the test of a fortieth of an acre of Blount's corn is not a fair test; that it is easy to give high cultivation to so small a plot, and that competitors have manured and cultivated, in the expectation of gaining one or more of the prizes, far beyond what it would pay them to do were they working for a profitable crop only. This would be true of most competitions of the kind—but it is not altogether true of Blount's corn, or, indeed, of any corn. Most of our readers probably know that often—if not in a majority of cases—the silk of an ear does not receive the pollen from the tassel of its own stalk. Probably in a majority of cases the pollen and silk of a given stalk are not ripe at the same time. We remember last summer to have shaken a cloud of pollen from the tassels of stalks before the silk had appeared outside of the husk. We also tried the experiment of planting 150 kernels of sweet corn ("Washington Market") in a single row, 10 inches apart. Many of the ears were imperfectly "filled out," some of them had not filled at all. In this experiment it is evident that unless the silk (pistils) were pollenated by the tassels (stamens) on the same stalk, the silk was dependent upon some of the other plants for pollen—a very uncertain dependence, too, if the wind chanced to blow briskly away from, instead of with, the row during the maturity of the pollen. The advantages, therefore, derived from the high cultivation of small plots of corn are offset in some measure by (first) the fact that the male and female organs are not ripe simultaneously, and that, therefore, (second) the smaller the area under corn, the more pollen there is scattered ineffectually by the wind. This dichogamous character (*i. e.*, the two kinds of reproductive organs maturing at different times) of some varieties of corn is that which causes them to intercross to a far greater extent than they would otherwise. A hundred different varieties of corn might be planted in the same field, without the slightest danger of mixing, if their respective reproductive organs performed their functions at different periods. Our readers will remember that last spring we planted, in one end of our five-acre corn-field, about 60 different kinds, at least 15 of which were distinctly marked, as, for example, white and yellow Flint, white Dent, red, variegated, etc., etc. All of these sorts were selected from those sent to us by subscribers as having produced large yields, and they were generally splendid specimens. During growth previous to caring out, all who saw the field predicted that that part of it upon which the mixed lot was planted would yield much heavier than the rest—and so it would have done, had it filled out as well. But it yielded an immense quantity of imperfect ears and nubbins, and the yield was considerably less. But, to return to fertilization. On some kinds, as, for instance, the variegated or Calico, the ears were filled out perfectly, and there was no evidence of any crossing having taken place at all. All were striped, as in the parent seed. Occasionally among the other kinds mongrel kernels appeared, but there was no such a grand mixture as we were led to suppose there would be from the number of dissimilar kinds planted. The "Calico" was among the first to ripen—possibly the first. If so, there was no chance for crossing. But we cannot account for the ears being so well filled out, except on the supposition that the male and female organs matured at the same time, and that there was little wind at the time of their maturity. The white Dent sorts were mixed very little, but the ears were very imperfect—sometimes there were less than half the usual number of rows, the other side of the cob being bare or having only a straggling kernel or part of a row. Now, so far as we have observed, the male and female organs in white Dent sorts do not mature simultaneously; for which reason, as the plants were scattered here and there, poorly-filled ears were to have been looked for. It was the same with the Flint varieties. It may or may not be worthy of remark that though not a kernel of *black* corn was planted, nor was there an ear of black corn harvested, a great many *black* kernels were found among the Dent sorts.

MAKING SUGAR FROM SORGHUM.

SEVERAL of our friends, particularly in the West, who during the past season have been experimenting in making sugar from Sorghum, have met with considerable difficulty especially in clarifying the sirup before it goes into the pans, and in producing granulation. Among the most successful and extensive manufacturers of sorghum sugar in the country, are A. J. Russell, Vice-President of the Northern Cane Growers' Association and general manager of the Amber sugar refineries, at Crystal Lake, Ill., and Mr. C. W. Schwarz, of Edwardsville, Ill., who has on several occasions given our readers the results of his experience in this connection. Both of these have kindly furnished us with their views on this subject, and although it is too late to profit this season by the information, yet the very difficulties or failures some have experienced in their attempts at sugar-making will tend to impress the lessons here given more deeply on their minds for use next season.

Mr. Russell says: "Our experience in making a little over two car-loads of beautiful sugar this year has taught us that the industry can be profitably carried on in no other way than by having proper machinery to clarify, evaporate and finish the sirup at the lowest possible temperature, thereby making a beautiful light-colored sugar and sirup free from sorghum flavor. Sometimes the juice requires special treatment, information on which can be given only on knowing the nature of the soil on which the cane was raised. There is no special preparation that will cause granulation; that can only be brought about by the proper manipulation of the juice with machinery adapted to the purpose and operated by those who thoroughly understand the business, or who are working under instruction from some one who has had practical experience and who has succeeded in making this sort of sugar.

The mechanical appliances now in general use make too much caramel and glucose instead of sugar, to make a financial success in making merchantable sugar that will be fit to compete in our large trade centers with the best product from sugar-cane. We have demonstrated, however, that this can be done by the intelligent use of proper machinery. But we would have added another failure to the long list of former ones to produce sugar from sorghum in paying quantities, had we not discarded old-fogy notions and appliances, and taken a new departure in this promising industry."

Mr. Schwarz says that he has found the following method of making sugar from Early Amber cane, most successful in his practice:—

"Work up ripe cane fresh from the field; heat the juice to about 180 deg. Fahr., and neutralize with milk of lime mixed with about a pound and a half of sulphate of baryta to 100 gallons of juice, so as to change blue litmus to purple. Bring the juice to the boiling point and let it settle. Draw off the clear juice and add to it about five pints of alumena jelly (made by dissolving porous alum and sal-soda separately in water and pouring together, making a jelly compound); then boil on evaporator to 220 Fahr., and finish in a separate pan to about 234 deg. Juice thus manipulated, has granulated solid by the time it has cooled down to 90 deg.

This process looks simple, but there are some difficulties in it:—first, the sulphate of baryta is patented under the Clough Process, and its use restricted; second, it is almost impossible for a beginner to judge the right quantity of lime for a good defecation, as by an over-dose the sediment becomes very bulky and restless in the tank, tempting the operator to use still more, which would darken the juice. Dioxide of sulphur has been recommended as an antidote against an over-dose of lime, but the difficulty of getting this of standard strength in market this season, has caused many failures. I have, in my later experiments, been able to reduce the quantity of lime over one-half, discarding the litmus test as unreliable; for the very bulky sediment is not all impurities, but a great waste of sugar. It is now too late in the season to make sugar but these difficulties will all be overcome by next season.

The following method works the best for late cane in making sirup:—To 100 gallons cold juice add 1½ pint of lime with or without baryta, and run it into the settling tank immediately; vary the quantity of lime according to results. As for a granulating compound, there is no such thing; if the sugar is not in the cane, none can be got out. Such is the case with cane long exposed to the weather. Light sirup made early in the season can be made into sugar any time, if the conditions are complied with in the first boiling.

I am still very busy with late cane. Farmers are yet hauling from all directions: but I hope to get through before Christmas. The Honduras cane I spoke of in my last, has been made up and made the largest yield of any. I made it into sirup only, which is very fine and shows a tendency to granulate, but its lateness of ripening makes it risky to plant it extensively.

Farm Economy.

THE IMPROVED HOME-MADE SMOKE-HOUSE.

LAST season I presented to the notice of the RURAL readers a sketch and description of a home-made smoke-house, using an underground furnace and a barrel. It was very extensively copied and used with good results. Our own worked first-rate, but the trench needs digging over every season, and this year I have made a more permanent arrangement above ground; and as it is so simple and cheap, I send a description of this one, for the benefit of those who have not something more pretentious.

Having several stones and mortar left over from some building done this fall, we resolved to construct a smoke-house; so one afternoon last week father and I went to work.

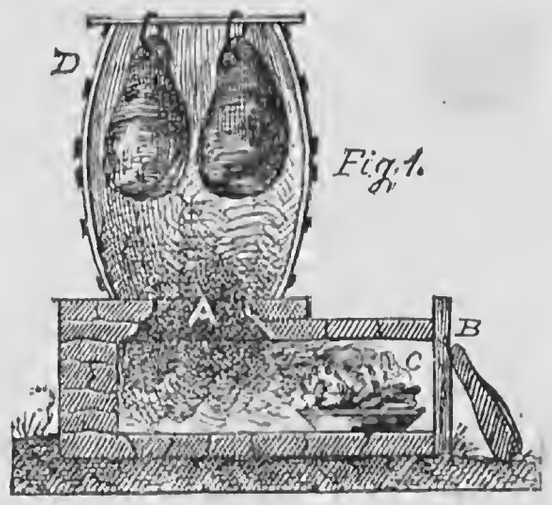


Fig. 1.

Fig. 1 is a sectional view, and shows the arrangement very plainly. We first laid, in mortar, a foundation of flat stones, about three by three and a half feet square; then raised the sides and one end about a foot, and covered the top with flat stones, leaving an opening at A for the exit of the smoke. The front end is left open, and is closed by a board or short piece of plank, as shown at B, and held up by a stone. A less primitive way can easily be adopted if desired. C shows the pan of smoking cobs. Over the opening, A, may be placed a headless barrel, D, which will accommodate three or four good-sized hams or shoulders. They are hung from a stick placed across the top of the barrel, and the whole should be covered by an old blanket or oil cloth, to keep in the smoke. The advantages of placing the opening, A, at one end, instead of directly over the pan of cobs, are, to avoid the heat, and, in case one of the hams should drop by the breaking of its string, it will not be injured by getting into the coals.

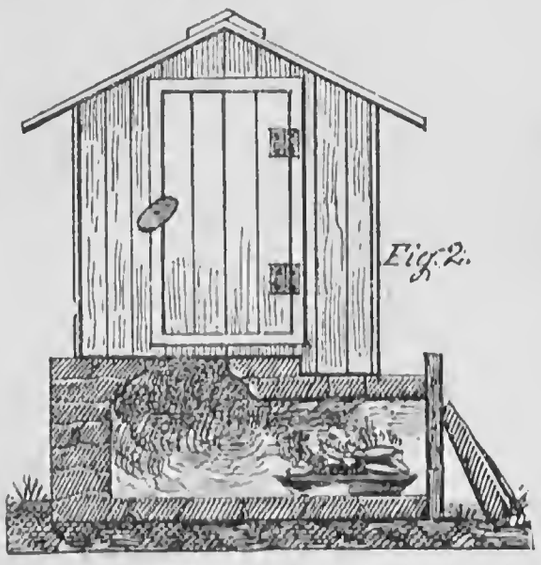

Fig. 2.

Instead of the barrel, a more commodious, square house may be built of boards, as shown in fig. 2, giving an outside view of the house and a partial sectional view of the same foundation or furnace as shown complete in fig. 1. This house may be three feet square for the above, and of any convenient hight, and would smoke a large number of hams, shoulders and pieces of bacon. Of course, the entire arrangement may be built much larger, if desired, and would work equally well.

Co., N. Y. WM. R. BROOKS.

The Herdsman.

WINTER FEEDING OF STOCK—No. 1.

PROFESSOR E. W. STEWART.

THE live-stock interest of the United States has grown into very great proportions. Our exports of animal products amount, in round numbers, to $140,000,000 annually, and are likely to reach $200,000,000 within a short period. But those exports represent but a small proportion of our live-stock interest. The home consumption of animal products is some six times greater than our exports. This, then, may be considered the great agricultural interest, and all the economies relating to it should be thoroughly studied and practiced. The common mistake has been to consider feeding animals a matter so simple as to require no particular knowledge; whereas, a little reflection will show it to be, perhaps, the most complicated industry pertaining to agriculture.

The elements of animal bodies are very diverse, and nature has furnished a great variety of foods to nourish and build them up. But farmers are too apt to think their animals can thrive on a single food, although they well understand the necessity of a variety of food for themselves. They do not study the laws of animal growth as their interest requires them to do. The largest part of all the labor performed by farmers has relation to the feeding of stock. All the hay and other fodder raised, and more than half of all the grain, is for the consumption of their animals. Look at the labor expended in fencing pastures, amounting, as many have estimated, to more than all the other improvements upon farms. How important, then, that all these results of labor should be used with the greatest economy. And as I propose to discuss the feeding of animals during the cold season, let us first consider the question of

Temperature in Feeding.

Farmers are learning every year more of the laws governing animal life, and few, perhaps, can now be found who do not know the effect of a low temperature upon animals. They have a general understanding that it takes more food to keep an animal warm in cold than in warm weather, yet few have an accurate idea of the extra food required during exposure to severe winter weather. I have had reports from careful open-air feeders in Illinois, that, during a severe February and March, they could not add anything to the weight of steers, when feeding even three-quarters of a bushel of ear-corn per day, considered equal to one-half bushel of shelled corn; while upon half that amount they would make a respectable gain in moderate weather. This presents a pretty strong view of the food required to keep up animal heat in very cold weather—28 lbs. of corn to prevent steers from losing weight.

The writer tried an experiment with 10 steers for three months, during December, January and February. Five were fed in a warm stable, and five in a yard having a high fence that broke off much of the wind. The steers in the stable weighed 5,800 lbs. and those in the yard 5,825 lbs., and the two lots were in equal apparent condition. Each lot was selected for the purpose of making an equal division of the two lots. Twenty pounds of good hay per steer were given to both lots as a maintenance ration; and, to those in stable, 12 lbs. of corn meal, and, to those in yard, 16 lbs. of corn meal each per day, for the first month, and for the next two months 14 lbs. of meal to those in stable and 20 lbs. to those in the yard. At the end of three months those in the stable weighed 6,925 lbs., and those in the yard 6,500 lbs.;—the former had gained 2½ lbs. per day and the latter 1½ lb. per day. If we are to suppose the 20 lbs. of hay sufficient for maintenance, then the 1,200 lbs. of corn meal made 225 lbs. of increase on those in the stable, or 1 lb. of gain to 5.33 lbs. of meal; and as those in the yard gained only 135 lbs. each, this would require 720 lbs. of corn meal, and as they consumed 1,680 lbs. of corn meal each, it must have taken 960 lbs. of corn meal extra to maintain them in the cold, open air; this is 11 lbs. of corn meal extra per day expended to keep up animal heat in the cold air. The weather was somewhat colder than average seasons, but it shows what may be lost in extreme cases, even with the shelter of a high fence. This may be considered almost as great a loss, proportionally, as 28 lbs. of corn fed in the West, in hard winters, as a maintenance ration without gain. This experiment was made in the early part of the winter's feeding, and was sufficiently impressive not to require a repetition. Five steers were fed because a test with a single animal would be unreliable.

It is quite safe to say that, in average winters, it requires an addition of 75 per cent. to the maintenance ration of an animal, if exposed to the temperature of the open air, over that needed if it is kept in a warm, well-ventilated stable. Temperature has, therefore, much to

do with successful feeding, and must be considered in the older States, if great loss is to be avoided. In the West, where corn is reckoned at 20 cents per bushel, some successful feeders think they can warm up the animals cheaper with corn than with warm stabling. This may have some plausibility for a few years, but cannot stand as a permanent system. Under the best system of feeding, it is difficult to make much profit upon the animals themselves; the controlling profit must be sought in the manure—keeping up the fertility of the farm for future crops.

As I design to touch shortly upon the various classes of stock, we will take, as first in order:—

Feeding Work Horses.

The horse is the principal motive power on the farm, and therefore needs the best attention. This class of stock is kept wholly for its muscle, and the working and culture of the farm must depend greatly upon the character and condition of the horses. The winter season is one of comparative leisure for horses, as farms are usually managed, and farmers appear to think horses require little attention when they are not in hard labor. They are quite in the habit of keeping them upon poor hay and straw at this season, reserving all grain for spring feeding. But this is very bad policy. Horses generally come to winter-quarters in thin condition from their summer's labor, and require judicious feeding and good care to recover their full working capacity; and farmers should remember that it is much cheaper to put horses in condition when work is very light, and that all the extra flesh put on in winter represents so much extra labor available in spring. Besides it should always be the aim of team owners to keep their horses in good working condition, for it takes less food to keep up condition than to recover it when lost.

Let us examine a few rations for work horses in winter. Horses are often subject to colic from improper feeding. When fed upon corn meal alone, its large percentage of starch renders it too heating, and, besides, it is a very concentrated food, and being just moistened with saliva so as to be swallowed, it goes into the stomach in the compact form of dough, and the gastric juice cannot circulate through it so as properly to perform its office, and internal heat, fever and colic often occur from want of proper digestion. All such concentrated food should be mixed with cut hay, the hay being just moistened so that the meal will adhere to it. This mixes the concentrated with the bulky food, and the hay separates the particles of meal so as to render the mixture porous, and the gastric juice now circulates freely through the mass and operates upon the whole contents of the stomach at once. The best way to use corn meal, as a single grain food, is to mix it with moistened clover hay. If the clover is of good quality, it contains a larger percentage of albuminoids (muscle-forming food) than corn meal, and thus helps to balance the constituents.

But one of the best rations for work horses is corn, oats and flaxseed, ground together—the corn and oats in equal weight, and to 19 bushels of the mixture of corn and oats add one bushel of flaxseed, and grind fine all together. The corn and oats make a well balanced ration, and the flaxseed is rich in oil, muscle-forming and bone-building elements; but its oil is its greatest sanitary element. This small proportion of oil is just sufficient to keep the bowels in excellent condition, the coat sleek, and every part of the system in well balanced activity. And then by feeding this ground mixture with twice its bulk of moistened cut hay, you have as perfect a ration for work horses as can be compounded. All regular grist-mills now have an apparatus for mixing different grains together, so that the farmer has only to carry the oats, corn or flax seed, in proper quantity to mill, and they will all be mixed without hand labor. If the farmer has no straw-cutter, he may use oat, or wheat chaff to mix with the meal to render it porous.

In wintering horses that are doing but little work, straw may be fed with the last ration and the horses will do well. From eight to ten pounds of this meal to each horse daily will bring them through finely, even on good straw. When oats are too expensive, corn-meal and wheat bran mixed in equal weights, with one pint of oil-meal to each horse, will give a good result. If hay is scarce, two pounds of decorticated cotton-seed meal, four pounds of corn meal, four pounds of bran and straw will winter horses well. But there should always be variety in the food. If the farmer has clover hay and straw, these should be mixed together—better if both be cut before mixing, but they may be mixed in the manger without cutting.

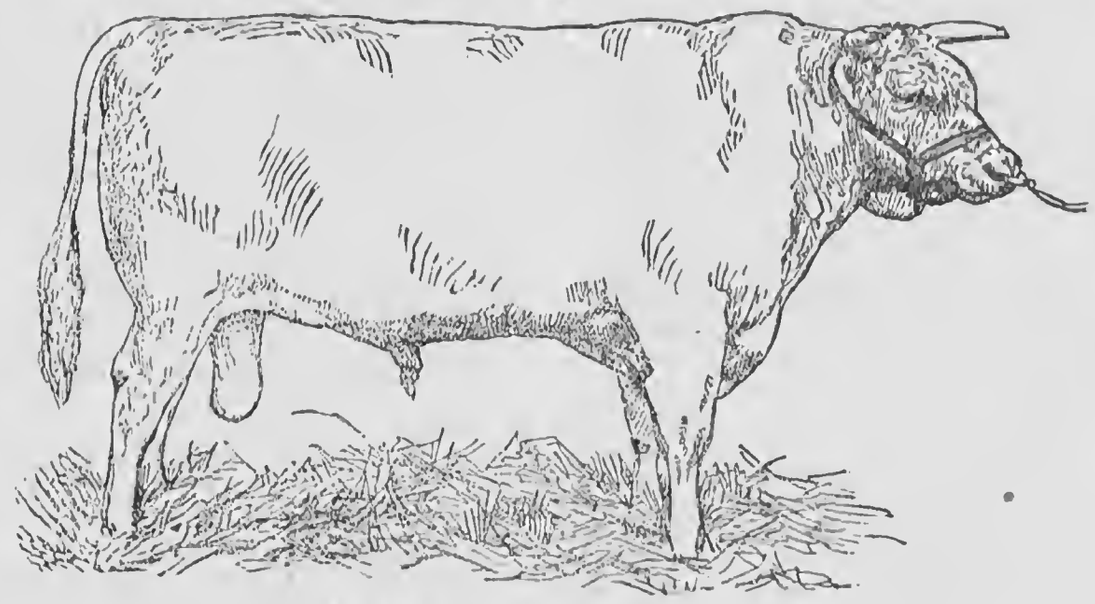
Feeding Colts.

The first winter is a trying time to the weanling colt. If the dam was a large milker and it had abundant nutriment, grew finely till weaned, and was then made dependent on grass, it has had a set-back before cold weather came. And if it is still to be dependent upon hay and straw for growth through the winter, it will be but little heavier in spring than when weaned. It is food only that develops young animals, and a good digestion is all-important. If a colt has been fed well before weaning, and after weaning has had deficient nourishment, this has not only checked its growth but commenced contracting its powers of digestion, and will soon incapacitate it for digesting sufficient food to make a vigorous and rapid growth. Many a fine horse has been spoiled in the defective growth of the colt. But the food given to the weanling should be appropriate for the development of frame and muscle. Such food as will produce fat rather than muscle cannot be too strongly condemned. No corn meal should be given to the young colt.

If the colt is in the poorly nourished condition I have been describing, the best chance of recovery is with the milk ration. The colt may be taught to take fresh, warm milk and when it has learned to take this, skim milk may gradually be substituted. Even sour milk will generally be taken greedily, but in the winter skimmed milk need not be sour. This milk contains so large a proportion of casein, or muscle-forming food, and phosphate of lime, that it is exactly adapted to the growth of muscle and bone. I once saved, by the use of sour milk, a very likely colt that had got extremely poor by bad management, and it afterward made a fine growth. Cow's milk will do what no other food can for a stunted colt. The best grain ration for a colt is one to two quarts of oats with a pint of oil meal twice per day. This and good hay will keep a colt in fine condition through the first winter. Although the colt should be well sheltered in a good stable, yet it should have an opportunity for exercise every day.

OUR ANIMAL PORTRAITS.

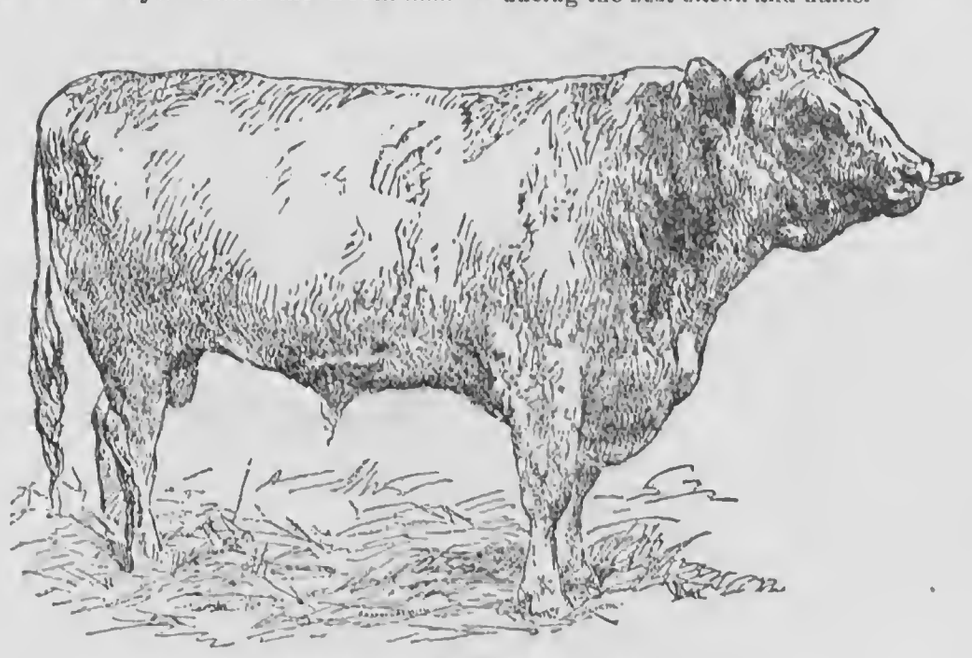
This week we present to our readers the portraits of two celebrated Short-horn prize-winners at the English cattle shows—the bulls Royal Windsor and Rear Admiral. They were bred by Mr. T. Willis, of Carperby, one of the oldest Short-horn breeders in Great Britain. They are closely akin both by recent crosses and by collateral descent from famous ancestors. Both belong to the old Rachel tribe and both are also large inheritors of the Warlaby branch of the Blossom or Fairholme blood. This is the oldest tribe of the Booth Short-horns. Away back before 1790, Thomas Booth, the first of the famous breeders of that name, purchased three heifer calves of Mr. Broader of Fairholme, the possessor of one of the finest herds of Short-horns of those remote days. Under the Booth management these became the ancestresses of several celebrated tribes, the most renowned of which was the Blossom. In the days of the elder Booths this became divided into four branches, two of which were sold to outsiders, while one was kept by John Booth when he settled at Killerby on his marriage in 1819. Thomas Booth, having resigned Killerby to his newly wedded son, removed to Warlaby, taking with him the remaining branch of the Blossom tribe along with most of his herd, and there continued breeding until his death in 1835. His son Richard and his grandson T. C. Booth who, one after the other, succeeded to the estate, continued to increase the fame of the Warlaby herd until the death of the latter a few months ago, the representatives of the Blossom tribe being always among the best of their stock. Of these, two renowned bulls were Fitzclarence and Windsor, both of which are in the pedigrees of the two fine beasts here represented.



Shorthorn Bull "Royal Windsor."

It is from this source probably that have come the strong frames and excellent outlines which have secured so many victories for both animals. As a young bull Royal Windsor won wherever he was exhibited, and now at eleven years of age, with sons, grandsons and great-granddaughters in the show-yard, the fine old animal still holds a front rank, has kept his fine shape, and stands comparison well with the youngest of his competitors.

Rear Admiral is also a famous prize-winner at several shows, the chief fault ever noticeable in him, being confined to his mean horns, a defect which of late he has measurably outgrown. The portraits are drawn from the English Agricultural Gazette.



Shorthorn Bull "Rear Admiral."

The Swine-Herd.

BERKSHIRES.—THEIR HISTORY AND CHARACTERISTICS.

COL. F. D. CURTIS.

Every breed of swine has its merits, arising either from natural differences which fit it for a specific purpose, or from local wants, or to correspond to some fancy or prejudice, which is often stronger than anything else; thus many people will not breed black pigs on account of the color, when there is really no difference between such a one and a white one, except a darker shading in the outer cuticle which is not black, but a bluish-white. This is the chief objection to the Berkshire breed, unless to it may be added, a want of large size with those who demand excessive weight. Berkshires possess all of the good qualities of other breeds and also a characteristic of having more lean meat mixed with the fat than any other. This characteristic was formerly more uniform and deeply marked than now. In the early history of Berkshires it was a peculiar feature and gave the breed great favor as producing the best bacon and hams.

The origin of Berkshire hogs dates back longer than that of any other improved breed. The name is derived from the Shire, or county of Berkshire, England. They were originally sandy or buff-color, or spotted with black. They were of large size and slow to mature. I can remember seeing Berkshire hogs of this description, when a small boy, and this was the character of some of the hogs originally imported. Improvements were made by selection, and the bodies were rounded and shortened with greater aptness to fatten and for early maturity. The peculiar markings of the modern Berkshires were not then established, but were made afterwards by crosses. About a half a century ago some breeders of Berkshires began crossing them with the Siamese hog—a smaller and finer pig, with a dished face, erect ears, and very broad, with extra heavy hams and shoulders. The old-time Berkshires had lopped ears. The Siamese cross changed the form of the ear and the whole contour of the pig. It also introduced more uniformity in the color of the breed, making more black and plum colors. It is not an uncommon thing now-a-days to meet with pigs of a rich plum-color, showing the effects of this cross. Pigs entirely black are also often seen, which demonstrates to my mind that subsequent crosses have been made with either the Essex or the Neapolitan hogs, both of which are pure black. The latter cross is the more likely to have occurred, since the pigs are sometimes almost without hair, which is a feature of the Neapolitan, and sometimes of the Essex, which they, too, have derived from the same source. We have seen in the same litter of pigs out of imported stock, a pure black pig, a plum-colored one, and the others with sparse hair, or heavy coats, showing without doubt the double crosses which had left their taint in the blood of the Berkshire, which a half a century of breeding had not eradicated, and which will not be eliminated for a century more, if it ever is.

Notwithstanding these exceptional markings, Berkshires have long been established as a thoroughbred breed of swine, and justly stand at the head of the list for their antiquity and uniformity. The peculiar markings of white feet and white blaze in the forehead, with a white brush, are probably the result of another and still later cross with the Chinese hog. The white markings are not always confined to the extremities, but are quite frequently found on the cheeks and sides, and sometimes all over the body in the form of patches and flecks. The later crosses of the Berkshires have reduced the size so that they are now mostly medium, or below medium in size, weighing, when full-grown, from 300 to 400 pounds, and the so-called improvements have also lessened the amount of lean meat in the sides, so that a rasher of bacon from a modern Berkshire is nothing in lean meat compared to what it was before the crosses were made to thicken the sides, shorten the noses and enlarge the cheeks.

Berkshires were imported into this country early in the present century and at the latter end of the 18th century. Although there is now no record, I am of the opinion that importations were made fully a hundred years ago in the vicinity of Baltimore and Washington. Importations were made in 1823, says A. B. Allen, who is excellent authority, by Mr. Brentwood of New Jersey, followed in 1832 by Mr. Haws, Albany, N. Y. Subsequent importations were made by those enterprising and leading men, Samuel Thorne and Gen. Morris, who did so much even in those early days for the improvement of American stock. A. B. Allen was also an early and prominent importer and to him the American public is indebted more than to any one else for an authentic history of this valuable breed of swine.

Berkshires will improve almost any breed of swine for fattening, when crossed upon them. So extensive has their breeding become that several years ago an association of breeders was formed and a Herd Book established, in which the pedigrees of pure-bred animals were recorded. The Berkshires are suited to any climate. The following is the adopted standard of characteristics and marks:

Color, black, with white on feet, face, tip of tail and an occasional splash of white on the arm. While a small spot of white on some other part of the body does not argue an impurity of blood, yet it is to be discouraged, to the end that uniformity of color may be attained by breeders. White upon one ear or a bronze or copper spot on some part of the body, argues no impurity, but rather a reappearing of original colors. Markings of white other than those named above are suspicious, and a pig so marked should be rejected. Face, short, fine and well dished, broad between the eyes. Ears, generally almost erect, but sometimes inclining forward with advancing age; small, thin, soft and showing veins. Jowl full. Neck, short and thick. Shoulder, short from neck to middle; deep from back down. Back, broad and straight or a very little arched. Ribs, long and well sprung, giving rotundity of body: short ribs of good length, giving breadth and levelness of loin. Hips of good length from point of hips to rump. Hams, thick, round and deep, holding their thickness well back and down to the hocks. Tail, fine and small, set on high up. Legs, short and fine, but straight and very strong, with hoofs erect, legs set wide apart. Size, medium. Length, medium; extremes are to be avoided. Bone fine and compact. Offal very light. Hair, fine and soft, no bristles. Skin, pliable.

Everywhere.

RURAL SPECIAL REPORTS.

MASS., Amherst, Dec. 7.—The changeableness of our New England weather was well illustrated during the past autumn. The weather of most of October would have been no discredit to midsummer, the mercury ranging from 70° to 80° on many days. This ended on the 24th with a hard thunder-and-hail storm, followed by a foot or so of snow and a week or two of real winter weather, the mercury going down to 4° on the 5th of November. Then we had two weeks more of warm weather, after which came another "cold wave," few days in midwinter being colder or more disagreeable than Friday, the 21st. Now it is as warm and pleasant as September, and no frost in the ground. Corn was about an average crop, but a good deal of it was soft and poor. Potatoes were a good crop, but they rotted badly in some fields, those on moist land and manured with animal manures suffering most, while many fields on dry, sandy land were entirely exempt. Apples were unusually good for the odd year, and the crops of pears, peaches and grapes were large. Pearl Millet is not wanted in this climate; it may be valuable further south, but here corn is preferable for fodder, and has the advantage of being more easily grown. The Millet so nearly resembles some kinds of wild grass, when young, that it is almost impossible to tell the difference. As I wanted to see what it would do on ordinary soil, I planted a couple of rods on land that would probably produce 30 bushels of corn per acre, but gave it up as a bad job at the first hoeing, after picking out one row. The plants in this row grew to a hight of four to six feet, and headed out somewhat before frost. Some of it was offered to the cows, but they would not touch it unless very hungry. I adopted the RURAL'S suggestion, started a plant in a pot the middle of April and transplanted it to the center of a highly-enriched flower-bed the 1st of June. It proved very effective for this purpose, and many were the inquiries from visitors and passers-by as to what it was. It grew to a hight of eleven feet and a diameter of five, producing 58 stalks, which weighed, when dried, 23 pounds. L. W. G.

OHIO, Norwalk, Huron Co., Dec. 9.—We are having splendid weather for this time of year. Business is quite lively, and this little town is improving very fast. The winter wheat looks very nice. Price of wheat, $1.25; corn, from 40@44c.; oats, 30c.; onions, $1.20 per bushel—the highest figures they have brought for years in this town; potatoes, 35@40c.

CONSTANT READER.

KANSAS, Everett, Woodson Co., Dec. 7.—We have had a very fine fall, taking it altogether. The crops were not as heavy as we expected, owing to the dry weather in the spring; but they are fair. The fruit-crop here this year was very short. J. J. D.

KY., Milton, Carrol Co., Dec 6th.—The Hessian fly has done irreparable damage to our wheat. The very late sown escaped its attack, but it is ill prepared to stand the winter. I found 35 of the pests in the flax-seed state in one stem of wheat. Who can beat that? Corn is light, averaging about 30 bushels per acre, worth 25 cents per bushel. Wheat is selling at $1.20 per bushel; apples, 50 to 60 cents; potatoes, 35 to 50 cents; oats, 30 cents; beef cattle, $2.75 to $3.50 per cwt.; hogs, $3.75 to $4.25 per cwt.; butter, 18 to 30 cents per pound; eggs, 20 cents per dozen. Our tobacco crop is much better than we expected it would be, and is selling at $7 to $17 per cwt. Tobacco growers are the only men in this vicinity with short faces. S. E. H.

ARKANSAS, Sebastian Co., Dec. 8.—The immense forests of Western Arkansas present a more extensive variety of timber than can be found in any other Western State. Men who have only cultivated lands opened by their fathers, or who have been unduly impressed by the advantages of a prairie land, may have some dread of a forest country; but the extra labor of clearing a forest farm is but a tithe of the cost of fence and fuel on the prairies. Good water, fuel, building-material and timber for all kinds of implements and tools, always on hand, are not small items in the cost and comfort of life. A man who arrives here during the months of November and December will have ample time to erect a log-cabin and commence getting fields fenced and ready for the plow by the 1st of February. They actually plow here right in the woods. The roots of the trees project downwards, and one can work as close to them as he could to a rotten stump. Of course, the timber is first girdled, unless the trees are needed for rails, when they are taken off first. Any one coming here is surprised to see immense fields of corn, cotton, sorghum and sweet potatoes growing right among the dead timber. No cold winters here to eat up the fruits of the summer's labor; climate unsurpassed; high elevation, and a splendid country for fruit. PIONEER.

The Querist.

ANSWERS TO CORRESPONDENTS.

WE have repeatedly said that any inquiry sent to this department *must* contain the writer's name and address, to insure attention. Yet quite a large number of questions now remain unanswered because this requirement has not been complied with. Where the answer would be of general interest, we have frequently disregarded our rule of paying no attention to anonymous correspondents; but where the inquiry is of a personal character, and one that should therefore be answered by mail, we have not felt justified in taking up the space that belongs to our readers in replying to those who have neglected to observe the rules which have been established for excellent reasons. It would be a great convenience also, if, in writing to us, our friends would put on a separate piece of paper any question they may wish to have answered in this department. We shall always be pleased to answer all questions from those who comply with the above simple proviso.

Ground Limestone and Lime.

S. B. M., Saltsburg, Indiana Co., Pa., asks, 1, does the burning of lime add to, or abstract any good properties from the limestone as a fertilizer; 2, what is the difference in the action on the soil between ground limestone and burnt limestone; 3, to what degree of fineness should the limestone be ground. There is limestone on his land and throughout the surrounding region, and if it is worth using as a fertilizer, he intends to procure a mill to grind it.

ANS.—1. Raw limestone is a carbonate of lime; that is, it consists of lime and carbonic acid for which the chemical formula is Ca CO3. In the process of burning, the carbonic acid (CO2) is expelled, and the oxide of lime (CaO) remains. This change in composition causes also a change in properties. Limestone, or carbonate of lime, is *mild* in its alkaline properties; while burnt lime is *caustic*, i. e., it has a very strong alkaline reaction. 2. Applied to the soil, the action of carbonate of lime and that of burnt lime are widely different. Powdered limestone will be of little value to the soil, beyond furnishing one of the essential elements of plant food which is generally abundant in the soil naturally, and, if it is applied in large quantities, it may alter the soil physically; but its action on substances in the soil is feeble and very slow. Burnt lime, on the other hand, is a powerful agent in decomposing the inert or inactive vegetable matter in the soil, and making these available plant-food. Besides this, it also acts on the compound silicates of the soil and liberates potash, another essential element of plant food, one that is seldom found in large quantities in the soil in the soluble form, and is therefore readily exhausted. Any one can readily satisfy himself of the difference in action between burnt lime and ground limestone, or chalk, by comparing the effect of slaked lime—as in fresh mortar—on his boots with the effects of chalk on the same. In the long run, the caustic lime is again changed into carbonate of lime, but not until it has combined with its full supply of carbonic acid. Its activity is vastly greater than that of carbonate of lime, however finely ground the latter may be. In the caustic state we have lime "with the feather edge on." 3. We would not advise the application of ground limestone, except where the soil is destitute of lime in sufficient quantity to supply what is needed as plant food, and this is rarely if ever the case, and the finer it is then divided the better, even then we would use lime in preference.

Apple tree Pests.

D., Little Rock, Ark. has several trees which grow thriftily, make wood freely, bloom well and bear fruit abundantly until the latter are about the size of a hickory-nut, when they begin to fall off and continue to do so until they are all off, or till those that remain are ripe, when they seem affected with dry rot and have a musty core. When the fruit is half-grown, the core is moldy. The roots are full of small fibers looking like tufts of grass, and the large ones are disfigured with knots, showing that insects have been at work on them. Our correspondent asks what can he do to cure the trees without cutting them down. He has applied half a bushel of lime to each tree, as well as wood and coal ashes, and likewise salt and gas-house lime.

ANS.—The apple-root aphis causes excrescences upon the roots. When very numerous, the growth of the tree is checked. The pest is destroyed by digging the earth away and washing the roots with strong suds. We have several apple trees at the Rural Farm infested with the borer, that act much as those described by our friend. It should be borne in mind that these insects may be for several years destroying the inner bark of the tree while there is little evidence thereof on the outer bark. They enter as little grubs. They come out as perfect insects three-quarters of an inch long, cutting round holes just large enough for their bodies to pass through. Supposing that they remain in the tree but a year (as many say), several of them might so nearly destroy the outer wood and inner bark as to greatly impair the tree's vitality. In this case, the tree blooms—makes an irregular, eccentric growth—sets fruits but has not the vitality to nourish them to maturity. The round holes caused by the borer's exit, are easily overlooked by the careless observer. Sometimes they are a little beneath the surface soil. The female deposits her eggs in May, June or July under the scaly bark. The worm which hatches out, eats into the tree, making a hole no larger than a buck-shot. At this time a knife or wire (as we have often explained) may be effectually used in crushing it. This is really the only effectual remedy. Washes applied in May and June will ofttimes prevent the beetle from depositing its eggs. The salt and ashes (except as fertilizers) can do no good and the gas-lime will prove injurious.

Bermuda Grass.

A. G., Eagleford, Dallas Co., Texas, has an orchard of peach trees on a slope of sandy land, and heavy rainfalls wash the sand away. To prevent this he has it in mind to turf the land with Bermuda grass; but some of his neighbors say it will kill the trees; others, that it would spread all over his fields in spite of all his efforts, and he asks what kind of grass should he use for the above purpose.

ANS.—Our friend cannot get a grass that will answer his purposes without some attending disadvantages. Bermuda grass (Cynodon dactylon) will "run all over." It will run over rocks six feet across and cover them. It will grow vigorously on sandy hill-sides and prevent them from washing. When fully established, it is hard to force a plow through it. It is sometimes said of this grass in the South that it would "take a team of six bull elephants to draw a thumb-lancet through it." It was cursed in the South before the war, but is now in many parts, looked upon with much favor. It will stand parching suns and present a fresh appearance if kept mown. It is therefore a good grass for Southern parks in *summer*. In winter it disappears from view. It would be necessary therefore to mix it with blue grass, and white clover which would spring up to cover the ground in winter. Cattle are extremely fond of this grass. It will withstand any amount of heat and drought J. B. Killebrew says that it has (where indigenous) a great reputation as a fertilizer and that many fields so worn-out as to be worthless, have been reclaimed by it. The labor of plowing it up is considerable, but some of the many improved plows of the present day could be easily dragged through it. Mr. Affleck says that no other grass will yield such an amount of valuable hay, surpass it in nutritive qualities, support on an acre of pasture such an amount of stock, improve the soil more quickly, or so effectually stop and fill up a wash or gully. But, on the other hand, its *extirpation* is almost impossible, though to check and weaken it, so far as to grow a grain or cotton crop, is easy enough. There is nothing better than Bermuda grass for our friend's purpose. We have presented both sides—he must judge for himself whether the reasons *con* are more or less cogent than the reasons *pro*.

Worms in Swine.

A. W. B., Monument, Mass., says that a neighbor, in cutting the lights of a hog killed a few days since, found therein numerous small worms, about an inch long and the size of a fine needle. The hog seemed healthy, except that it coughed a little, and he asks what were the worms: what caused their presence there, and a remedy for them.

ANS.—Fluke worms and other parasites are often found in the intestines of hogs, and sometimes in the flesh. It is a rare thing to find them in the lights (or lungs). We do not believe that, when such is the case, the disease can be cured; at least, we do not know of any effectual remedy. Doses of turpentine will destroy tape-worms and other parasites in the stomach and bowels, and possibly in the lungs. This can only be done by the absorption of turpentine into the blood, in which it will be carried to the lungs, and by absorption in the tissues of the body, by which a small portion will reach the lungs. Whether enough would do so to eradicate the disease is doubtful. Fluke worms in the lungs of sheep are quite a common disease in England, and one that is incurable. The presence of the worms in the lungs would account for the cough, and in time, like sheep with the same disease, the hog would pine away and die. The hog could have caught the disease by feeding where sheep with the same disease had pastured, by eating the grass, or where pigs had run, as animals with parasites in the lungs will cough them up (or the germs, which will produce them). Animals showing evidences of this disease should be immediately confined by themselves, to prevent its spread. We know of no cause, except as indicated above, or by animals eating the flesh of others which were infected by parasites.

An Exploded Swindle.

G. K., Litchfield, Mich., asks whether the Denver Land Co., which he has seen advertised in several papers, is an honest affair.

ANS.—In a short editorial in our issue of November 22 we warned our readers against having anything to do with this arrant swindle. The affair was gotten up by a notorious fellow whose last of several aliases was Grant. He obtained a title to some sand-hills about 30 miles from Denver, Col., and then advertised in about 800 papers that he would give a lot of 25x125 feet in East Denver, Col., for one dollar. Since then he has been arrested for the swindle, and at last accounts was in prison. That the gullible fools are not all dead yet was amply shown by the piles of letters with remittances that filled the mails to his address before his arrest. So obviously was this a swindle on the very face of it, that it seems strange any reputable paper should have given it a place even in its advertising columns. The advertisement was promptly rejected by the RURAL, as are others, less obviously dishonest, every week.

The Best Hardy Monthly Roses.

J. H., Dayton, Ohio, asks which are the best hardy Monthly Roses, and where can he order some for delivery by express in spring.

ANS.—The best hardy Monthly Roses are:—Achille Goudot, Ardoise de Lyon, Auguste Mie, Baronne Provost, Caroline de Sansal, Charles Lefebre, Duchess of Southerland, Elizabeth Vigueron, Enfant de Mt. Carmel, General Jacqueminot, Glory of Waltham, Henry IV., John Hopper, La Reine, Gustave Bonnet, Mad. Louise Carique, Mad. Trotter, Phœnie, Pius IX., Prince Camille de Rohan, Reynolds Hole. They can be had from Ellwanger and Barry, Rochester, N. Y.; Parsons and Sons' Co., Flushing, L. I., and of several other nursery firms.

Miscellaneous.

S. E. H., Milton, Ky., asks whether we think the manufacture of sugar from sorghum will prove profitable in this country.

ANS.—The industry is, in reality, as yet in a state of probation—on trial. Some of those who know little or nothing about it practically, seem much inclined to pooh-pooh it; those who have invested both money, time and talent in it, seem quite hopeful of success, as may be seen by the opinions in another part of this issue.

M. N. F., Monroeville, Pa., asks where can he get Angora goats, and what would be their probable price.

ANS.—Angora goats are for sale—or were, a short time ago—by W. Kloewne, Hicksville, L. I.; J. S. Goe, Brownsville, Pa.; Richard Peters, Atlanta, Ga.; price about $80 per head.

W. W., Deer River, N. Y., asks to whom should he write concerning some property situated in the city of Colmar, Elsass, Germany.

ANS.—Apply for information to the Consul-General of Germany, 2 Bowling Green, this city.

E. T. F. B., Providence, R. I., has received some rye from California, which he has planted in a box, and he asks if he can leave it out-of-doors during the winter.

ANS.—We should sink the box in the ground to the rim and give it shelter out-of-doors.

J. P. S., Pittsburgh, Pa., asks if Cohoes or Troy is the terminus of the Erie Canal.

ANS.—Albany is the eastern terminus of the Erie Canal.

W. Bros, Nashville, Tenn., asks where can the Duchess Grape be obtained.

ANS.—From J. T. Lovett, Little Silver, Monmouth Co., N. J.

Various.

WHAT OTHERS SAY.

ADULTERATION OF FOOD.—Prof. A. R. Leeds, of the Stevens Institute of Technology, has undertaken the investigation of a large number of articles of domestic consumption as a part of the work devolving upon him by his

connection with the New Jersey Board of Health.

He says that many of the fears awakened in the public mind by the discussions in the newspapers concerning the deleterious or even poisonous character of various substances said to be used in the adulteration of many articles of food, are entirely groundless, and that the most searching analyses in his own laboratory failed in nearly all cases to reveal their presence, although the articles tested were for the most part purchased at the meanest shops, whose custom consisted of the poorest class of the community. The adulterations found consisted mostly of substances harmless in themselves and used for the purpose of increasing the weight or bulk of the articles sold. Such adulteration must of course be branded as fraudulent; but while it is an offense against public morality, it is not one against public health. The following are some of the articles examined.

It has been objected to by some that bread is adulterated with potatoes, but this addition, so far from being injurious, actually improves the quality of the bread. A few samples of bread contained very small quantities of alum said to be used for the purpose of making it whiter and lighter. Some contend that a very little alum is not injurious because it is rendered inert by the phosphate of lime contained in the flour, and also by the acids of the gastric juice. Not the slightest trace of copper was revealed in the bread examined by the most searching methods of analysis. Saleratus was found in nearly all cases to consist, as it should, of perfectly pure bicarbonate of soda; but cream-of-tartar was found to be adulterated in some cases as much as sixty per cent. Baking powders, which should consist of bicarbonate of soda and cream-of-tartar in suitable proportions, kept from combination by the admixture of a little starch powder, were found to vary greatly in the amount of their effective constituents. All the sugars examined were found to be perfectly free from all injurious substances. No sulphuric, nitric, or hydrochloric acids were found in vinegar. All the samples examined derived their activity from acetic acid, of which, however, they contained different proportions. In other words, some of them were more or less diluted with water. None of the samples of milk examined were found to contain any more serious adulterant than water. A diligent search was made to find brightly colored cucumbers whose tint would indicate that copper had been used to make them more attractive: in none of them, however, was even the faintest trace of copper found to be present. Canned goods were found to be free from all deleterious substances. Spices procured from various sources differed greatly in strength, and all contained foreign substances increasing their bulk and diluting their pungency Different samples of teas examined chemically and under the microscope revealed the fact that they were adulterated by leaves of other plants to a very great extent. Some of the cheapest kinds, selling, say for 35 cents a pound, contained no tea leaves whatever. Candies were found to be much more free from injurious substances than the public has been led to believe. Many of them contained a large mixture of glucose, but the coloring matters used were comparatively harmless. In some of them analine colors were used, which, although poisonous, cannot be fairly so called in the very minute quantities necessary to color candy.

Prof. Leeds examined green wall papers for arsenic, and exhibited several tubes containing arsenic extracted from them. These papers must be condemned as highly injurious, especially as the arsenic is but loosely applied to the surface and is easily diffused through the air, whence it finds its way into the lungs. One specimen of arsenic shown was extracted, curiously enough, from a little green Christmas tree candle.

He concludes by saying that three things are necessary to keep the practice of adulteration in check: a strong public sentiment kept aroused by the public press; the enactment of stringent laws; and the appointment of competent persons to execute them.

ROTHAMSTED CROPS.—"If the results obtained at Rothamsted," writes Dr. J. B. Lawes to the English Press, "both in the permanent wheat field and with the numerous varieties of wheat, be accepted as indicating the quality as well as the quantity per acre over the country at large, the farmer will benefit but little by the rise of price hitherto reached. Thus the average weight per bushel of the 23 varieties of wheat is this year only 53¾ lbs., whereas the average weight over the preceding eight years has been 61¼ lbs. It is, therefore, this year 12½ per cent. less than the average. It is obvious that the farmer would have to deliver more than nine bushels of the produce of this season to supply the same weight as in eight bushels of the previous seasons. Nor would this be all, for with the lower weight per bushel much of the grain is so thin, and contains so much husk and so little flour, that it will be only fit for the mill at all when used with a large admixture of foreign grain, and will consequently command comparatively low prices. In 1863, which is the year in which I commenced to give an annual report and estimate of the wheat crop, the main produce of the three artificially manured plots was 55 bushels per acre, with an average weight per bushel of 62⅝ lbs. In 1879 the very same manures have given an average of only 19⅝ bushels, at 53⅜ lbs. per bushel, equal to only 16¾ bushels at the same weight per bushel as in 1863. We have here a striking illustration of how great is the influence on the result of the farmer's efforts of circumstances entirely beyond his control, after he has employed all the resources at his command to obtain a good crop."

CROSS-BREEDING AMONG FISH.—Mr. Robert B. Roosevelt, so well known in connection with fish breeding, is responsible for some surprising assertions with regard to the intercrossing of distinct species of fish. Some two years ago the eggs of a shad were placed in a pan of fresh water, which could not have contained any milt of the male shad. This done, the eggs were mixed with the milt of a striped bass, and they were immediately fertilized. They were then placed in the shad-hatching boxes, and fully 10,000 young cross-breeds were the result. They were turned into the river at the proper time, and it is not yet time for them to return, if they follow the customs of their mother.

That the hybrids are likely to thrive and breed is thought probable after the perfect success that has followed the crossing of the California salmon and the common brook trout. Mr. Roosevelt says: "We have crossed fifteen or twenty different breeds, and all successfully, and I can assure you that the result is a strong argument in favor of Darwinism, for it shows that all fish may possibly have grown out of one or two varieties. This would account for what is called the 'land-locked salmon,' which is found in lakes having no communication with the sea. The object of this crossing and breeding is to improve the fish, just as they cross neat cattle and horses, and even fruits and flowers. The result will be to make fish food plenty and to add a large number of 'queer fish' to the number already in existence."

HYBRID SHAD.—Mr. Seth Green has recently called attention to the fact that it has been customary for the last four years at the shad-hatching works on the Hudson River, whenever an opportunity offered, to impregnate the spawn of the shad with the milt of the white bass. He says that these eggs have hatched out in quite as large a percentage as those impregnated with the shad milt. The young fish look very much like small shad, but their actions are so entirely different that they are readily distinguishable while in the hatching boxes. The attention of fishermen and others is particularly called to the fact that such hybrids now exist in the Hudson, and they are requested, if any such be caught, to make known the fact through the papers or otherwise, describing as particularly as possible the appearance, characteristics, etc., of the strange fish.—Scientific American.

PUMPKINS.—Dr. Horne, says in the Country Gentleman, that he has himself fed cows to repletion on sound, ripe pumpkins, all the season with the best results. He has also known many persons give cows all the pumpkins they would eat, with good results. In his practice he has never known a single instance of abortion, or any other disease to result from feeding pumpkins. Some claim they make the best of butter; some say they injure the butter. He cannot of his own knowledge say as to this, but is quite inclined to believe they cannot in the least injure the butter, especially if fed with corn meal, etc. The seeds act powerfully on the urinary organs, and should always be taken away, so that the cows cannot eat them. Cattle of all kinds will maintain good condition, largely fed on pumpkins, and so will horses. This he knows.

ABOUT GOING WEST.—The class of men who can go West, or to a new country, and succeed, are those who are strong to labor, who have pluck and energy, and who possess enough means to give them a good start. * * *

But, having determined to go, what is the next step? Personally inspect the localities to which your thoughts are turned. Do not invest a dollar on the recommendation of others. Better spend all needful time and money in thoroughly acquainting yourself with the advantages and disadvantages of the country. Then you will not be disappointed. * * * *

The most essential thing needed by the emigrant is "pluck." Go determined to win. Do not be frightened by a single disastrous season. Thousands turned their backs on Kansas and Nebraska after a grasshopper year, who to-day heartily wish themselves back there. Remember there are bad years and hard places for farmers everywhere, and "having put your hand to the plow, do not look back." Why should a young man settle down on a worn-out farm for a life-long struggle with debt, that will make him sordid and old before his time, simply because he happened to be born there? A popular writer has compared such a one to "a hen sitting on an eggless nest."—Ohio Practical Farmer.

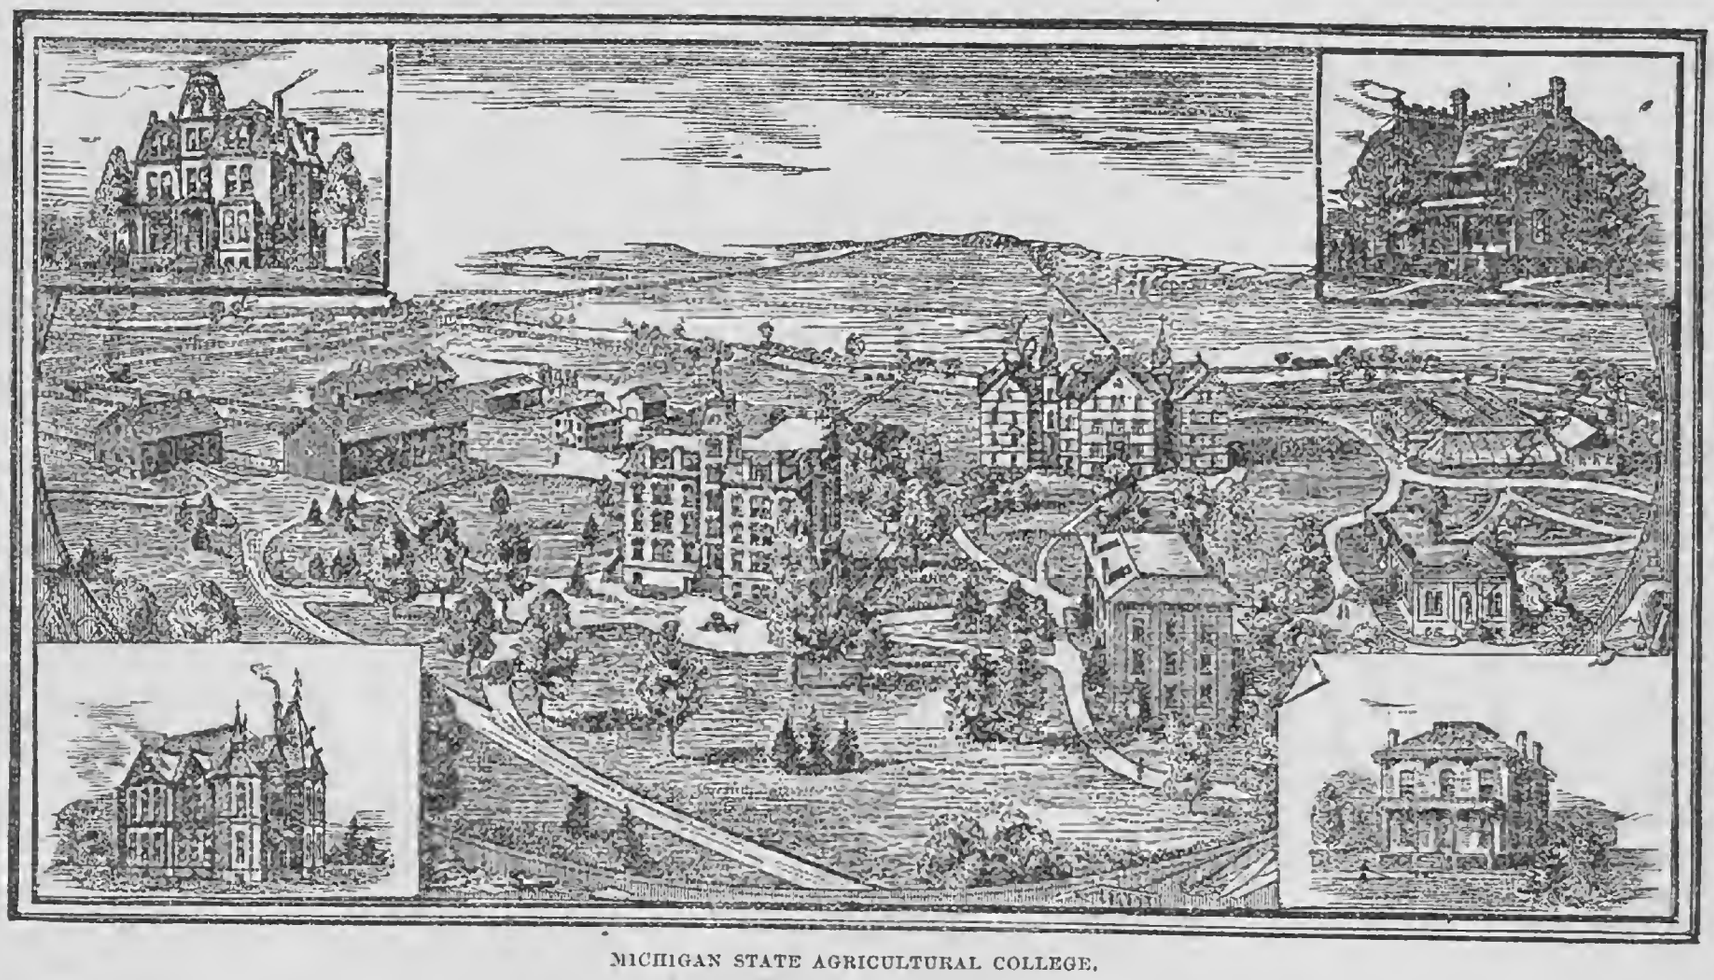
WHAT IS WANTED.—Mr. L. S. Hardin says, in the London Ag. Gazette, that it is his notion that it is about time the breeders of Shorthorns began to look at home for the trouble about the neglect of their pets by the graziers. They must abandon the chase after pedigree, and remember that when the city merchant sits down to his roast beef, it is a matter of no moment to him whether he is eating a piece of beef from the wilds of Texas or a slice from the loin of the fourth Duke of Glo'ster. What he wants is a piece of juicy, tender meat, and that is all he is willing to pay for; and the grazier wants animals with not only iron constitutions, but, above all, they must be sure getters and early breeders.

GOOD CEMENT FOR CHIMNEYS, ETC., J. R. Leute tells the N. Y. Tribune, may be made by simply wetting Rosendale cement with paint oil. Mix thoroughly and to a consistency that will not run. No sand or other ingredient is needed. It adheres well to wood or brick, and sets hard and tough.

Industrial Topics.

THE STATE AGRICULTURAL COLLEGE OF MICHIGAN.

WE here present an engraving of the State Agricultural College of Michigan, which is situated three and one half miles east of Lansing, the capital of the State. It is the oldest college of the kind in the United States, having been opened to students in May, 1857. A few years later Congress offered a land-grant to each State for the establishment and maintenance of agricultural colleges. Michigan accepted this offer, and 235,673 acres, all located within the State, were appropriated to the support of the college. The proceeds from the sale of these lands are placed in the State Treasury, and the interest alone goes to the college. Lands to the amount of somewhat over $250,000 have now been sold. Besides this, additional appropriations are made by the State Legislature to defray necessary expenses. The management of the institution is in the hands of the State Board of Agriculture, which consists of a body of six men appointed by the Governor, each holding office for six years.



MICHIGAN STATE AGRICULTURAL COLLEGE.

Great improvements have been made at the college since its opening. Then there were but two halls, erected in the midst of the woods, with numerous stumps around the very doors; now the grounds are studded with dormitories, halls, laboratories, greenhouses and barns. A botanical laboratory, recently erected, is shown in the lower left-hand corner of the engraving; the buildings in the other three corners are specimens of the professors' dwellings. A farm of 676 acres is attached to the college, about 300 acres of which are under cultivation. Various approved breeds of cattle and other domestic animals are kept on the farm for the instruction of the students.

The college is provided with an able corps of professors, all of whom are scientific men and able teachers, and several of them are known as writers upon agricultural and scientific subjects. T. C. Abbot has been President of the college since 1859; Dr. R. C. Kedzie occupies the chair of Professor of Chemistry; W. J. Beal is Professor of Botany and Horticulture; A. J. Cook of Zoology and Entomology, and R. C. Carpenter of Mathematics and Civil Engineering. Two able professors recently left the College; G. T. Fairchild was called to the presidency of Kansas Agricultural College, and C. L. Ingersoll to the chair of Practical Agriculture in Purdue University, Indiana.

The institution has now graduated 211 students, over 60 per cent. of whom are engaged in agriculture or related industrial arts. The classes are constantly increasing in size, as the college is in renown and usefulness. The present year's catalogue shows a total of 232 students. The college year commences in September, but during the winter there is a three months' vacation, which furnishes an opportunity to teach school to those of the students who may desire to do so. Tuition is free to all, and students not well supplied with means have opportunity to defray their expenses in part by working on the farm and gardens. What has become known as the labor system has here been introduced, and works to perfection. All students not exempt by physical inability, are required to work three hours a day, for which each receives compensation according as he works, the maximum rate at present being eight cents an hour.

The course of study occupies four years, and embraces mainly the Natural Sciences, Mathematics, English Literature and Practical Agriculture. Due prominence is given to sciences closely related to agriculture, such as Botany, Chemistry, Surveying and the like.

As this institution is the oldest Agricultural College in the Union, so it is generally held to rank also as the best. In spite of a fierce popular prejudice which assailed it in the early years of its existence, it has won the way to favor, popularity and success. We trust it may continue to increase its educational facilities and spread its influence in the future as it has in the past. This is preeminently an agricultural country, and whatever institution helps to educate the farmer and elevate agriculture deserves the fullest measure of success.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address THE RURAL NEW-YORKER,
78 Duane Street, New York City.

SATURDAY, DEC. 20, 1879.

TO SUBSCRIBERS.

We cannot promise, but we can *nearly* promise, to place an assortment of the Cow Pea in our present free seed distribution. We may deem it advisable to substitute this for the Telephone Pea, as the stock in England is next to nothing. In this case, we shall present our own stock of the Telephone to our subscribers as a supplementary distribution, as far as it can be made to go. We have also two other announcements to make as soon as arrangements are completed. As to the Cow Pea, we do not believe, from our own experience, and from what we have gleaned from several private sources, that we can do our readers better service than by offering them the opportunity of testing its value.

We venture the prediction that those nurserymen who are propagating a large stock of the "Sunray Pine" (Pinus Massoniana var.) will reap a golden harvest when they offer it for sale. It is one of the most striking beauties we have ever seen; and, in so far as it may be judged by a test of the past three years in our grounds, is perfectly hardy. It was well described and illustrated from life in this journal, Dec. 29, 1877.

Our best thanks are due to many of our subscribers who have sent and are sending us small clubs. It is too early as yet to speak definitely. But the promise is that we shall have for next year all we have asked for, viz., double the *increase* of the present year. Our friends probably have little knowledge of the *aggregate* benefit we derive from their good words and the occasional subscriptions solicited from their acquaintances which they forward to us. Such subscribers are of the very class we prize most highly.

At the very best it need not be hoped that the American Agricultural Society will, at the outset, be free from flaws. If the will of all good men deeply interested in agriculture were to rule, it could prove no less than an efficient instrument of noble service from the start. But it is the will of the *workers*, whether good or bad, that rules. Hence the necessity of men to do the Society's work who, while they have the good of agriculture at heart, can *afford* to give their time and their best thoughts to its wholesome progress. Grand—magnificent are the *possibilities* of this national organization!—we grant that. But possibilities here imply earnest, patient, well-directed, unremitting labor. It is the rush after alluring *probabilities* that saps the life out of benevolent enterprises and tumbles them down.

There can be no doubt about it, of course, that tarred paper, in many cases, has satisfactorily answered the purpose of keeping mice away from the stems of trees during winter, else its use would not be so often recommended; but it is a remedy we should never resort to. We have seen fruit trees seriously injured—as good as killed, indeed—by its use. We have never had a fruit tree injured by mice, and we attribute our immunity to the fact that their stems have been washed every fall and spring with a mixture of lime, sulphur, hellebore, soft-soap, soot, and red mineral paint-powder—the two last added so as to make the wash a near approach to the color of the bark. The stem up to the branches is washed with this, while just at the base it is spread on in a sufficient quantity to wet the surface of the ground about the stem. Tar paper confines the air—holds the moisture, and induces a soft, tender condition of the bark that, by alternate freezing and thawing, often ends in decay.

We need not call attention to Doctor Ledoux's article on the Southern Cow Pea. If there be any likelihood, or even possibility, of its becoming as valuable in the Middle, Western and Eastern States as it unquestionably is in the South, then it is worthy of extended trial. Knowing little of the manner of its growth, we made the mistake of planting the seeds too close together. The consequence was an entangled mass of vines that rendered it difficult for us to separate one variety from another, and note the peculiarities of each. We should be very glad if we could distribute samples of this Pea (which is not a pea) among our Northern readers during next spring, as a supplementary distribution. We already have too much on our hands at present, however, to feel justified in expressing any more than the *wish* to do so. The reader will see that the note on another part of this page speaks more positively as to this matter.

While listening, the other evening, to the amusingly innocent remarks that dropped from the lips of the crowds of city ladies and gentlemen admiring the various groups of cattle at the Dairy Show, we were strongly impressed with the conviction that the breed, name, age and chief merit of each animal should be plainly written or printed on a card, nailed conspicuously to the railing in front of it. It would also be both interesting and instructive, not to cockneys only, but often also to country visitors, if an enumeration of the points of excellence of each breed were prominently displayed on a card close to the quarters in which the representative animals are confined. Apart from the stimulant it is to further exertion on the part of the breeder, the only object that justifies the granting of premiums to such exhibits, is the instruction the examination of them affords the public, and this object would be much more effectually attained if the public were informed of the merits for which each class is distinguished, so that each visitor might examine personally how far such excellences are embodied in each animal on exhibition. The winning of premiums is a mere secondary object in such displays; public instruction should be the main end in view, and nothing that could facilitate this should be neglected. Of the numerous fairs we have attended in at least twenty States in the Union, we do not remember one in which the adoption of the above suggestions would not be an advantage.

THE AMERICAN AGRICULTURAL ASSOCIATION.

In a former issue we stated that steps had been taken for the organization of a National Agricultural Society. This organization was completed last week at the Metropolitan Hotel, in this city, where, on the 10th, 11th and 12th, delegates to the number of about 150 met in convention, representing fourteen States. The committee on organization reported a constitution which, with slight alterations, was adopted by the convention. The Society takes the name of The American Agricultural Association, and its avowed object is, in short, to further the interests of agriculture in all its branches, by all the means in the power of the Association. The membership fee is one dollar, on the payment of which all who are in any way connected with agriculture may join the Society. The officers were elected under the constitution; President, John Merryman, of Maryland, with a very long list of Vice-Presidents. Mr. J. H. Reall, of this city, was made General Secretary. A permanent executive committee of five, with the President and first Vice President, constitutes the working force of the Association.

Many prominent farmers and scientific men throughout the Union have identified themselves with the movement, and we trust these will earnestly take the matter in hand and in unison work for the good of agriculture. There is an unlimited field for improvement, and there can be no doubt that an Association of this character, if rightly managed, can discover facts, reach conclusions and disseminate knowledge that may help greatly to develop our agricultural resources, and thus indirectly benefit farmers.

The Association should not merely be a body of men that meet once or twice a year and listen to some lectures and essays, and have a good time generally. There is work to be done, which we have no doubt the Association fully realizes. We know not how the Society proposes to go to work; but it appears to us that if sections or standing committees were appointed, each committee having some special subject to investigate, valuable results could be most surely and satisfactorily reached. Thus, a committee on animal diseases, composed of the veterinary experts of the Association, should thoroughly investigate this important subject; another committee could deal wholly with diseases of plants, especially destructive fungi; still another with field culture and the extermination of weeds; another with destructive insects, etc., each section, of course, being composed of experts in that specialty. The undertaking is highly commendable, and we heartily wish it success.

RAILROADS AND THE FARMERS.

"The farmer pays for all." Especially does he pay for the railroads. The dividends which give value to these enormous enterprises come from the freight of his wheat and corn. The farmer, then, should be interested in knowing something of the true inwardness of the great railroad corporations which he supports. A case of unusual prominence has recently been made public. It concerns the greatest owner of railroad stock and probably the richest man in the world, and it shows the enormous profits made from investments in railroads. It is as follows: Mr. Vanderbilt, the President of the New York Central railroad, recently sold to an association of capitalists 150,000 shares of stock in his road, at $120 a share, and an option of 100,000 shares more at the same price. This sale involves a sum of $25,000,000. It is of great interest to trace out the profit of this transaction to the seller and to show how enormous wealth is made to pour into the coffers of great railroad capitalists.

In 1868 a scrip dividend of 80 per cent. was made upon New York Central; in other words, the capital was increased to that extent by a few strokes of the pen. No money passed in this operation; the 80 per cent. increase was a fiction in one way; but an enormous reality in so far as those were concerned who had to provide dividends, which gave the increase a substantial existence. In 1869 the N. Y. Central and the Hudson River railroads were consolidated; and at this time, *to equalize values*, a further scrip dividend was made on the N. Y. Central stock. Thus, without the payment of one cent. in money, one hundred dollars of stock was suddenly made to represent a value of more than two hundred dollars, and the increase on the quantity of stock in question would stand as follows:

Par value of the stock in 1868	$12,077,295
Eighty per cent. scrip dividend	9,661,836
Second scrip dividend	3,260,869
	$25,000,000

Since 1869 the consolidated stock has paid annual dividends, on the more than doubled value, of 8 per cent.; the dividends and other profits on the stock since then would stand thus:

Eleven years' dividend on stock	$22,000,000
Profits on sale, at 20 per cent	5,000,000
	$27,000,000
Add capital stock	$35,000,000
Total stock and dividends	$62,000,000
The original cost of the stock was	$12,077,295
Eleven years' interest, at 7 per cent	9,299,517
Total legitimate investment and profit	$21,376,812
Increase of value	30,623,188
	$52,000,000

In plain words, the actual value of the stock has been increased by stock dividends, usually called "*water*," and 8 per cent. annual dividends upon it, by a gross sum of more than *thirty million dollars!* This gross sum has actually passed, or will pass, into the possession of the selling party. Whence has this money come? A large part—the annual dividends on the suddenly-created stock from scrip dividends—has actually come from those who have paid the freights which have made up these enormous profits of over 16 per cent. per annum. This can be traced clearly. The rest comes indirectly, or will come when it is actually realized, from the same sources. But it must be remembered that, as yet, this portion is intangible.

"A breath unmakes it, as a breath has made,"

and it represents a value that only exists as it draws interest; it is yearly interest capitalized. The fact remains, however, that the public must toil and labor to pay the 8 per cent. dividends which give this stock actual value. What is wealth? This question naturally presents itself to our minds as we consider this astounding transaction. How were these millions created? We read of the famous lamp of Aladdin, by the mere rubbing of which untold treasure rolled at the feet of the fortunate owner. We always thought this story was a fiction of those Arabian nights. But here is the famous lamp, and here we have the fortunate owner. But who pays for it all? "There's the rub." How many years would a farmer have to work to save a thousand dollars; and here some one makes as much in a few years as 30,000 farmers could save in a lifetime. Truly, "farming don't pay" as well as some things."

BREVITIES.

The city of New York is filled (to exaggerate a trifle) with dairymen and farmers. Where are the dairymaids?

The more we learn of the past harvest the more correct seem the inferences drawn from the hundreds of reports in our special crop numbers.

We hope that the ladies who attended last year's Dairy Fair, were educated up to being able to distinguish this year a churn from a washing-machine

Mr. W. Robinson, Editor of the London Garden, writes us under date of Nov. 10:—"You are making a wonderful improvement in the Rural New-Yorker. I am delighted to see those original and bold cuts of good plants."

The latter days of 1879 will be remembered as having given birth to an American Agricultural Society. The trouble with other such infants that have been born from time to time, has been that there was no Reall vigor in their bodies.

Notwithstanding the huge obelisk, the occasional mounds and the frequent plateaus of cheeses at the International Dairy Show, the *milkiest* collection of the article there is that of old Stilton.

By careful computation, according to the comparative estimates of the agents of the respective sorts, there are some churns at the Fair that will produce butter in 48 hours and ten minutes before the cream has been put into them.

Professor A. R. Ledoux, the accomplished Director of the N. C. Ag. Experiment Station, whose valuable article upon the Cow Pea will be found elsewhere, says: "I hope some of your readers will try this crop next spring, and report the results through your columns."

We read of a case in France when a horse seized a brutal master that had been kicking him mercilessly, and bit him several times so injuring him that he was carried to a hospital. We sometimes wish that all good horses had the sense to "fight back" when they are treated with cruelty.

Among the most important conditions of a healthy diet is that food must be adapted as regards quantity and quality to the amount of work to be done by beast or man As a rule, this is not considered at all. We eat what our appetite craves and until it is satiated. Hence it is (if our readers will pardon the expression) we "burst our boilers."

Will our friends have the kindness, when they write us on several topics, to write each on a different piece of paper. Thus it will save us much trouble, and insure our friends more prompt attention if they, instead of sending subscriptions, questions, "Everywhere," etc., on one sheet, would put each subject on a separate one. In sending stamps do not stick them to the paper.

We are preparing our *Index* with much care. Last year's index was the best the Rural has ever had. This year's will be still more accurate and full. Our aim has been so to index the subject-matter of articles that reference to any topic, regardless of its title, will be readily found. The excellence of an index ought to be rated as high as the excellence of the work itself.

During the coldest part of winter, when the ground is frozen, every hen-house should be provided with a box six inches deep, with sifted coal-ashes and sand for the fowls to dust in. Occasionally, when the weather is so inclement that they prefer to remain in the house, it is well to throw the corn, oats and wheat into this box, that they may be induced to scratch and exercise.

Potatoes that were at all affected with disease before being dug should be frequently looked over, so as to remove those that are decayed, otherwise the whole will quickly become affected. Window plants suffering from plant-lice, should be smoked with tobacco. Place the plants under a barrel, and also a pan with some live coals upon which put some tobacco, moistened so that it will not blaze. If the plants are left in the fumes for ten minutes the lice will be killed and a good syringing will finish the work.

A suggestion to Messrs. Pell and Sewell. They have had five successive bad seasons in England. This is quite enough to have produced agricultural depression there or anywhere. Why not suggest to the government and people of the United Kingdom that they move to a climate that is good for something. Either that, or the government and people must *change* the climate. What's the use of making a complexity of this simple problem?

Among all the orators at last year's Dairy Show, Gen. Butler bore away the palm for statistics. This year, however nearly every speaker seems to have been busy with agricultural and commercial reports, to compile long arrays of figures that should leave Ben's cyfering a world behind. And, then, what enormous possibilities in the way of sum-making does the subject possess! Thirteen million milch cows in the country! Just think of them! An aggregate of thirteen hundred million pounds of butter and cheese produced from them, to say nothing of all the milk they have supplied to our tables! There's food for the imagination as well as for the million!

There is no grape of which larger quantities are sold in the Northern markets, at this season, than the Catawba. It is, among our hardy sorts, substantially the only grape now retailed in fruit-stores and from street-stands. The boxes sell readily at from 20 to 25 cents each. They hold about three pounds, the boxes averaging a little over one-eighth of a pound. The Catawba always sells for from five to ten cents more per box than the Concord, when the market is well supplied with each. That forthcoming hardy white grape (that has been forthcoming so long), which shall bear transportation and keep as well as the Catawba, will meet with a hungry market and a ready sale.

Industrial Societies.

INTERNATIONAL DAIRY FAIR ASSOCIATION.

SECOND GRAND EXHIBITION.

Opening Ceremonies.

Display about the same as last year.

[Rural's Special Report.]

THE second annual exhibition of the above-named Association was opened Dec. 8th, at the hall of the American Institute, Sixty-Third Street and Third Avenue, New York. The gratifying success of the first fair resulted in a permanent organization; which, during the past year's consolidation, has been able to complete arrangements for a succession of exhibitions which promise to be of the greatest interest and value. The need for the Association was unquestionable. Our dairy interest is of great value, and is susceptible of enormous profitable expansion. In fact, with regard to cheese, it may justly be said to be in a condition of embryo, and quite undeveloped as far as the supply of our home wants is concerned; and an exhibition of the products of other countries, which are excellent and popular in their several localities, may very well serve to educate both the general public and the dairymen; the one as to the various kinds and qualities of cheese which may become desirable articles of consumption, and the other as to the manner of offering their products in useful and attractive forms to their possible customers.

The dairy interest has everything to gain from making itself familiar with the public, and the public may learn much by becoming familiar with the technical matters relating to dairying. The exhibition now open in this city presents a general view of the dairy business. There are some fine herds of cattle on view. At the entrance, on the right, are a selection of Dutch (so-called Holstein) cows and a bull, from the herd of Mr. Neilson, of New Jersey; on the left, some Jersey cows shown by Dr. Newell and Mr Holly, also of New Jersey. Mr. Crozier, of Long Island, exhibits, at the other end of the hall, 32 head of Jerseys, Guernseys and Ayrshires; and Mr. Wells, of Conn., has a herd of Ayrshires. As specimens of these dairy breeds it would, perhaps, be difficult to select better subjects for exhibition. Passing the first herds mentioned, the visitor meets with piles of native-made cheese, of sizes varying from the few pounds of the "Young America" "Pine-Apple" and other small kinds, up to the ordinary factory cheese and the monstrous cylindrical masses weighing a thousand pounds. In a conspicuous position on the floor are pyramids of fancy foreign cheeses; the exquisitely rich Stilton, the globular Edam, the flattened Gouda, the Leyden, Brie, Parmesan, and other highly-flavored and *scented*, but toothsome, kinds, which please the palates of English, French, German, Dutch, Italian and Spanish cheese-eaters, with whom cheese is an article of steady daily diet. An enormous pile of salt in bags—a veritable pillar of salt—serves to preserve the memory of a well-known dealer in this commodity, and to attract attention by its apparent incongruity and uselessness in such an exhibition. Why might not an enormous pile of bales of hay, or of bags of feed, answer as useful a purpose in a dairy fair as all this salt?

Passing on, the visitor sees utensils of every kind and of the most novel character, as well as the standard sorts which have been proved by years of use in the dairy. To note even the most conspicuous of these in detail is impossible as yet, for a day's work is not sufficient to make a full record of all the noteworthy things which are on view; and on the first visit of the season an interested person cannot go into detail in a methodical manner. The men one meets here are by no means the least important part of the show. Brushing past a Wisconsin dairyman, well known in his craft, one elbows a Californian fresh from his pastures in the foot-hills or watered on the western shores by the fogs of the Pacific. Here is a venerable Eastern dairyman whose fame is world-wide, and there one from a Southern State, who has proved that the indigenous grasses of the sunny fields of Mississippi can be turned into the choicest butter by a herd of excellent Jerseys.

And so we see that all over our broad land the dairy can be made a source of wealth, and that the widest interest is shown in this Association by our enterprising dairymen. A glance about the broad hall, as one turns to take a general survey, gives a faint idea of what the details consist of, and of what interesting matters can be met with in a closer scrutiny; it shows that this is an instructive exhibition, and that American dairying is by no means an insignificant business, but one that calls forth the intelligence and the enterprise of a vast army of industrious workers in many different fields of labor.

SOME DAIRY IMPLEMENTS.

THE largest display in any one class at the fair consists of the numerous patterns of milk coolers. There seems to be a determination on the part of inventors to exhaust their ingenuity in discovering all the infinite varieties of ways and means by which cold air or water may force the cream from milk. There are certain features characteristic of them all:—The idea, for instance, that they are manufacturing a cabinet, that is, a parlor ornament, never leaves their minds. Their exhibits, therefore, to the plain farmer, must look more like furniture for drawing-rooms than the old idea of an every-day milk room. They all in some way, take their motive power from ice or water at a low temperature. The idea of keeping the milk as nearly as possible in a solid body instead of spreading it out as was the former custom, is common to them all.

As we approach this class of implements along the south aisle, the first one we reach is The Ferguson Bureau Creamery. This is a very handsome piece of furniture with drawers like a bureau, as its name suggests. The milk is poured into pans some eight inches deep, and by a happy contrivance these are pushed into the cabinet where the ice in a chamber above, has lowered the temperature to about 58 or 60 degrees. This creamery is more upright than broad. About one-third of its space at the top is taken up with an ice chamber with glass windows for detecting the disappearance of the ice. Under this ice chamber is a row of drawers on wheels or castors, resting on a movable tramway which is taken off when the drawers are pushed in. Below this row comes a second row of drawers, and below these, are a chamber for cream and butter and another for a heater in cold weather. The theories in support of this creamer differ from those on which all the others are founded, in that they never desert the old faith that cream rises best at sixty degrees and should at all times be perfectly ventilated. There are no great claims made for cheapness in behalf of this creamer, as it is the faith of the agent that the best is the cheapest so long as the price is reasonable.

The next cooler reached is Clark's Improved Revolution Milk Pans. These are a series of long, deep pans set on their edges and nearly touching each other in a square box so arranged that water cooled with ice can run between them. There is no provision for the storage of ice in this creamer, so that some other contrivance must effect that. The novel feature of this plan consists in a contrivance for tilting the pans up on their ends and from pitcher-like mouths pouring the cream off. This position is handy for cleaning the pans. This creamer claims the virtue of being very cheap, and certainly in its general get-up, has none of the pretentions that are so characteristic of its neighbors in this class.

The next in order is the long row of elegant creamers from the Vermont Machine Company's works—the Cooley Creamers. The pluck and energy with which this creamer has been urged and the success its reception has met with at the hands of the public, are the probable incentives to many of the new designs now pleading for public favor. The submerged theory is still the leading idea in the Cooley can. The inverted pan over the top of the can for the purpose of allowing the cans to be submerged under water, is still the leading feature, while many devices are resorted to in the way of simplfying this difficult point to handle. They have, however, with great ingenuity devised a handle to the can, so arranged that it receives the rim of the inverted pan through a slot and holds it secure and free from touching the rim of the can. The concave bottom of this pan prevents the water that condenses on the underside from dropping back on to the milk, causing it to run off at the sides, thus relieving the fears of some dairymen that animal odors thus accumulated, if allowed to return to the milk, would injure the butter. The above-described contrivance has not yet been made thoroughly public, though we were allowed to make allusion to it. There is such sharp competition between these cooler gentlemen, that, when one hits upon a good thing, he must secure his patents before he allows his contemporaries a chance to "improve" upon it. One other novel feature in the Cooley Creamer this year, is the introduction of an elevator. With these heavy cans of milk to handle, this is certainly a most commendable effort. The empty cans are set upon a movable platform that just fits in the creamer. By means of chains and a crank this platform is lowered and raised just as the "Old Oaken Bucket" went up and down the well when we were thirsty boys. The proper manipulation is to stop the descent of the platform when it is half way down, and fill the cans with milk; then let them proceed to the bottom. When the cream is ready to be taken off, the crank is put in motion and the cans raised all the way up. A small gutter of galvanized iron is then laid between the cans, and a peculiarly constructed faucet by which you turn the spout instead of the handle to make it draw, delivers the skimmed milk first and subsequently the cream into this gutter which leads it into a pail set on the floor. When the cans are empty, they can be lowered half way and filled again without washing. This faucet is a new feature with the Cooley Creamer. The stationary part that fits to the can, has an opening on the side, the spout fitting over this, moves from right to left. When turned to the right, it is closed; but when turned to the left, the hole in the spout, comes in line with the opening in the stationary part, so that milk or cream readily passes through it. There are very ingenious contrivances for taking this faucet apart for cleaning. It is almost too intricate, however, for us to attempt a description of it. These new features—the spout, cover and elevator—will add but little to the cost of the creamer There is every disposition on the part of those who are putting new creamers on the market to keep the prices as low as a fair profit will allow.

Next in order as we proceed northward along the aisle, is Moseley's Cabinet Creamery, a most beautiful and tastefully gotten-up box. The peculiar features of this creamery are a jacket or well that allows the can to set in water and the milk or cream to be drawn from it at the same time. Like many of the others, the upper third of the box is taken up with an ice chamber. Leading down from this into the air chamber below are jackets into which are set the cans of milk; there being an inch space between the jacket and can, cold water can circulate about the cans. Spouts, with glass necks, are inserted in the bottoms of the cans, which pass through holes in the bottom of the jackets, thus allowing the milk to be drawn from the bottom, the glass allowing the operator to see when the cream makes its appearance, so that the faucet can be closed until a change of pails can be made. There are ventilators in the tops of the cans and also in the lids to the box, so as to remove the animal odor.

On the northern aisle we come to Butler's cabinet creamer. This is arranged so that when the can of milk is in its place in the creamer, the upper half is in either ice or water, while the lower half is in air. The most novel feature with this design of creamer is the conical glass bottom of the can, so that the milk can be seen while escaping, and stopped as the cream approaches.—To be continued.

PROCEEDINGS OF THE MEETING FOR A TEST OF RECORD OF DAIRY COWS.—OFFICERS AND RULES.

FOR some time the agricultural press has discussed the importance of a Society to test the actual producing value of dairy cows in milk and butter, and to have it done in such a manner that it would be accepted as authoritative. In obedience to public notice, a large and representative meeting convened December 9th, in the rooms of the American Institute, in New York city. Dr. A. S. Heath was called to the chair, with L. S. Hardin Secretary. Mr. Hardin stated the objects of the meeting. He said it was of vital importance to dairymen to know whether any or all of their cows paid a profit, and it was important to purchasers to know just what a cow could do. We want to set on foot some plan to cover this ground. A trial farm had been suggested, where cows should be sent. This would be too expensive. Another mode put forward was to employ men to go about and make the tests. This would, he feared, cost too much: better fall back on the highest test known in law,—take a man's oath. The tests should be thorough to be useful, and take into consideration the feed, time of milking and period of gestation—everything connected with the condition of the cow. Such a system in successful operation would reach out over the whole dairy world.

Mr. Rutherford, N. Y., said all the restrictions possible should be adopted. The Society should always have power to supervise tests. Tests must be reliable to amount to anything. In all cases where there is doubt, there must be personal examination by the Society.

Mr. Barnes, Ohio, had worked on a plan of his own, and thought all tests should be made for a year, as there were so many variations during the year. He could tell how to feed his cows, as he could always tell by his test when they were "out of sorts." He could tell the actual value of food, and what to feed and how much. This was worth all of the trouble. The interests of owners would lead them to keep a true account; if they did not, they must keep two books.

Mr. Mason, Vt., had 40 years' experience in testing cows. The system was valuable.

Mr. Michener, Pa., thought the plan a good one. He tested cows to find out the good ones. This was knowing in black and white. The value of the milk for butter ought to be tested; one of his cows gave 37 pounds of milk which only made one pound of butter. The best milk he ever had to make a pound of butter was 18 pounds of the former to one of the latter. The calves of his best cows usually made good cows.

Mr. Hazard, Pa., did not want the escutcheon theory talked about as some had alluded to it. Are the proposed tests valuable? Do we want them? Shall a plan be adopted? In the best dairies 20 per cent. of the cows are unprofitable; in the poorest 35 per cent. The tests must be by public authority. The truth can be got at if supervisors from the neighborhood are selected to attend to it, and these can be had from the local agricultural societies or granges.

Mr. Whittaker, Mass., "Discrepancies need not arise when sales are made, as a man swears to what a cow has done, not to what she will do. The greatest difficulty is to get at a basis of feeding to make tests uniform, as there is so much difference even in hay. Farmers breed from their best cows now. I do not weigh my milk, but I know my best cows. I tell by the pail. A man's word ought to be as good as his oath. The best organization is personal effort."

Prof. Alvord, Mass. "A Society would encourage the idea of testing cows, and this would be a step forward. Records would be good lessons, and men with poor cows will not be contented until they get good ones. A record of every month would be more valuable. The details should be as simple and plain as possible." He showed samples of butter from a Jersey cow which had produced, from March 5, 1878, to March 5, 1879, 705 pounds of butter. Mr. Sharpless, of Pennsylvania, had offered $10,000 for her. A Swiss cow had made 493 pounds in one year.

Mr. Willard, N. Y., thought if dairymen could be induced to keep a record, it would be profitable to them. A record was necessary to weed out poor cows.

Mr. Hoxie, N. Y., kept a record for three years of all his cows, and thus found out their value.

Dr. Sturtevant, Mass., believed in precision in agriculture, and in the dairy it is specially important. He had kept a record of all of his cows (from 12 to 60) since 1867. There had been no guess-work. A record might injure a cow, as each one had a normal capacity of from 1,000 to 4,000 quarts, and to force her above it would tend to reduce her usefulness afterwards. The cow forced from 4,000 up to 5,000 quarts would be likely to fall back to 1,000 the next year. He was afraid records would lead to undue forcing.

Mr. Hoxie, N. Y., said stimulation in a cow will improve the offspring in that direction.

Prof. Gold, Conn., said the Association could get records which farmers would not dispute, and they should be of breeds as well as cows. He agreed with Dr. Sturtevant that forcing will injure a cow's future usefulness.

Mr. Hardin said that we want a standard of profit so low that any cow can come in.

Dr. Sturtevant:—"This is no struggle between thoroughbreds and natives. I want to help you all I can, without having much faith in it."

Mr. Neilson, N. J.:—"The feeding-test is important, as it will be an educator. My cows which do best often have calves good for nothing. This, I think, substantiates Dr. Sturtevant's theory, that forcing injures a cow. I have been told that the next generation would make it all right."

Mr. Barney, Ohio, did not think forcing injurious.

Dr. Heath:—"The principle of Dr. Sturtevant is endorsed by medical men. Over-work and over-stimulation do injure the vitality and strength of an animal."

Mr. Hardin moved that the meeting proceed to make an organization and that a committee of five be appointed to draft a constitution and by-laws—carried. The committee were L. S. Hardin, Ed. D. Barney, F. D. Curtis, E. Reeder, W. L. Rutherford. The meeting then adjourned until evening when the committee reported a constitution and by-laws which were adopted. The name of the new organization is The National Dairy Cattle Club. The following officers were elected: Pres. T. S. Gold, Conn.; 1st Vice Pres. H. C. Hoffman, N. Y.; 2d Vice-Pres. H. Stewart, N. J.; Sec. L. S. Hardin, N. Y.; Treas, R. H. Allen, N. Y.; Executive Committee, F. D. Curtis, N. Y., W. L. Rutherford, N. Y.; Jas. Neilson, N. J., Edw. E. Barney, Ohio, Ezra Michener, Pa. The above gentlemen represent all of the different breeds, including the natives. At a meeting of the Executive committee who were charged by the Constitution with preparing the necessary rules and regulations to govern the Association, it was agreed that: the fee for membership shall be $3, and for record $3, with 25 per cent discount to members. The fee for a subsequent record of the same cow and for the other cows in the same dairy, $1. There shall be three grades of test and record for milk or butter:—one of a week; one for three days during the first week of each month, and one continuous for the entire year. A standard of profit for a cow was set at 4000 pounds of milk for a year, and of butter 200 pounds. Further principles and details were subsequently agreed upon to place the club upon a working basis. The officers in charge are men of experience, and state that they realize the difficulties in the way of success and will work carefully.

OVER THE WIRES.

I HEAR a faint, low singing,
Like the sound of distant choirs;
'Tis a message gleefully winging
Over the telegraph wires.
And what are the glad wires humming
As they stretch in the sunlight away?
"I am coming, coming, coming—
I am coming home to-day!"

And now I hear a sobbing,
Like some soul sitting alone,
With a heart that is wearily throbbing,
And lips that can only moan.
Oh! what are the sad wires sighing
As they reach through the darkness of night?
"He is dying, dying, dying—
Come on the wings of light!"

The titillation of laughter
Next falls upon my ear,
And a burst of mad mirth after,
Like the sound of a distant cheer.
And what is the gleeful story
That the round wires spread afar?
"*Our Nine* is crowned with glory—
Hip, hip, hip, hurrah!"

Oh! what are the wires relating,
Morning and noon, and night?"
"The market is fluctuating!"
"Report of the Senate fight!"
"Cashier S—— a defaulter!"
"Arrest a man named Brown!"
"Jones died to-night by the halter!"
"Wheat went suddenly down!"
"Dead!" "Born!" "Going!" "Coming!"
"Deluge!" and "Drought" and "Fires!"
Singing, and sobbing, and humming
Over the telegraph wires.

CHAPTER XXV.

TRIED FOR HER LIFE.

"Did you sleep last night, Jeanie?"

"Yes, soundly," she replied, smiling still.

"Are you feeling less strong, then, my dearest?" he said, tenderly.

"I have no strength, Archie—it has all left me."

"Jeanie," he said, with an irrepressible gesture of pain, "you are breaking my heart."

"And yet you should be glad," she whispered, gently, turning her face so that she could look full into his eyes. "Darling, we were very happy once—that happiness must suffice for me. I could never be so happy again, I think—it will be best so——"

"You wish to leave me, Jeanie?"

Her eyes rested still on his face, never losing their fixed loving gaze; with his arms around her, with her head resting on his heart, she was willing, more than willing, to lay down the burden of life, to go home.

"At one time I should have thought it hard to leave the world where you were," she answered tenderly, lifting up one little frail hand and pushing back his hair from his forehead. "Now it is changed; and lately I have brought you such sorrow that you ought to rejoice if I am taken. Oh! Archie," and she clung to him with a sudden terror, trembling in every limb, "if I could die before to-morrow—I am afraid—I am afraid!"

He carried her to a seat, and, kneeling beside her, tried to soothe and reassure her with tender words and caresses.

"Oh! think," she said, with a long shudder—'think how dreadful it will be—the crowd of people, the faces on which I shall read contempt and disgust! That good man who came to me to-day—the chaplain, I mean—told me not to think of it, that as my day so would be my strength; but I cannot help dwelling on it, Archie; it seems to me that one glance from all those eyes will strike me dead."

"But you will be cleared, darling child," he murmured, soothingly.

"Cleared! ah! no; even if they cannot prove my guilt, they cannot prove my innocence to those thousands who believe in my guilt," she moaned. "Archie, pray that I may die!"

A swift shudder ran through him.

"Jean," he said, softly, I love you!"

The tender words loosed the heavy rain of tears, and as she bent her head upon his breast and clung to him weeping, the deadly fear of the morrow passed from her, and she was strong to endure once more.

For some time they were silent. When the paroxysm of tears passed away, she leant against him faint and passive, but calm, with a smile upon her lips.

"You will never doubt me, Archie?" she said, at length, when he rose to go. "I can bear all the rest."

THE court-house of Glossin was crowded; the interest in all other trials was tame and cold beside the interest taken in this. The judge had been sitting for two days on an important trial of forgery and fraud, but the court had been comparatively empty; but on the morning when Jean Blair was tried for her life, for the murder of her husband, it was crammed to excess.

Not merely was it crowded by the lower and middle classes, but the aristocracy of the land was represented there; and when Jean entered, with her languid step and heavy mourning garments, she saw many a familiar face among those around the judge upon the bench—faces which she had seen in brilliant assemblies amid the soft light, with the flash of jewels around them, the rustle of silken robes, the soft sound of music stirring the air. As she sat down, there came before Jean's eyes, as in a mirage, the Ball room at Blair Gates, with its brilliant throng, its silvery laughter, the soft, perfumed air, the dreamy dance-music.

She saw, when the first moment of pained sightlessness was over, Lord Sholto's frank, handsome face, grave and sorrowful now; the Duke of Glossin's familiar features; the Earl of Ivor's pale, worn face, with the gray eyes so anxiously tender as they sought hers; and beside Archie, with his hand clasped in his, sat Captain Murray, his pleasant face white and pained, and his lip tremulous under his drooping moustache.

Jean was very pale but very calm. Her face, even her lips, were bloodless, and the circles under the sweet, brown eyes were deeply marked; while the heavy, sombre folds of her mourning-dress made her look still paler and thinner. Collins was with her; by special permission she had been allowed to attend her mistress, and as she took her seat beside her, with an almost involuntary movement Jean slipped her hands into the maid's in mute appeal for help and assistance. One glance only she had given Lord Ivor, trying to smile at him with her parched, white lips; then she sat white and still, with her long lashes resting on her cheek, and a sorrowful droop on her sweet lips.

There was hardly an unmoved countenance in the sea thronging the court-house; many of those present knew her face well—had known it in its bright beauty and wilful *espiegleries*; and later, in its proud, sad loveliness, and they could not but feel for her now in her desolation and woe. From her face they glanced at the Earl's; they knew, most of them, of the engagement between them; one or two had heard a vague report of the circumstances of her marriage with Mr. Blair (they thought, perhaps, that if she were guilty, there was some excuse for the crime), and one and all wondered what his thoughts were. The handsome face was very pale, colorless as the girl's own, the gray eyes were sorrowful and anxious, but whenever they went to the accused face, they filled with unutterable tenderness; his love and faith were unchanged.

No. 16.

The barristers and lawyers were in their places, and some little sensation was caused in court by the appearance of Sir David Cairnes, for though people had guessed that Jean would be well defended, they had not thought that the great lawyer would be her advocate. He looked calm and composed as usual as he took his place, giving Jean a courtly bow and a reassuring glance. She did not see it for her lids drooped still; she only realized the fact that she was to be tried for her life—that it was in the power of the twelve grave men in the jury-box yonder to give her life or take it from her. What would their decision be?

The indictment was read. Jean heard it but dimly, although it was read in a clear, distinct voice. There came no change in her face when she listened; but when the question was asked her whether she was "Guilty or not guilty," she lifted the sweet, sad eyes, and answered in her low, rich voice, faint, but unfaltering:

"Not guilty."

Then the lawyer for the prosecution began. He was a distinguished member of the Scotch bar, and a clever man; his speech was eloquent and exhaustive. He commenced by giving the court an account of the circumstances of Jean's marriage.

"It is greatly to be deplored," he went on, "that the late gentleman insisted on the legality of the irregular marriage which took place at the little Moorlands inn. That she, who thereby became his wife, and who is present among us, accused of a terrible crime, bitterly regretted having placed herself in his power by a few light words, is no secret. She rebelled greatly against the marriage; but Mr. Blair infatuated with her beauty and grace, had held to it, hoping, doubtless, to win her love in time. He won no love, gentlemen; he won her hatred. Perhaps he laid too much stress on his power to please—for that the murdered man was a gentleman of great personal advantages and fascinating manners, all those who knew him can testify, and perhaps he thought too lightly of the fact that Miss McLeod's affections were irrevocably bestowed upon another. There was no conjugal felicity in the splendid home to which he brought his bride; there was domestic discord of the gravest character. The heads of the house were divided against themselves. Of this, gentlemen of the jury, you will have ample proof later on.

This is the more to be regretted, because, notwithstanding his wife's indifference to himself, Mr. Blair invariably treated her with kindness and courtesy, and even, if she would have permitted it, with the affection he assuredly felt for her."

Then Mr. Donaldson proceeded to enlarge upon the domestic differences at Blair Gates and upon the sudden death of its master, and the circumstances thereof; and the beautiful face of the woman in the dock grew lividly pale as she hid it in her hands. It was terrible torture to hear the domestic misery which she had kept so carefully concealed, as she hoped, from the world, thus dragged before the public; and the pitying eyes that watched her saw the long shudder of agony which ran through the slight frame as she listened.

Towards the end of his speech Mr. Donaldson's eloquence rather failed. He had done his duty in putting the case for the prosecution clearly before the court, but when it came to uttering words condemnatory of that slight, pale girl before him, his heart failed; and all in court noticed that the conclusion of his speech lacked the brilliance with which it commenced, that his voice grew husky and unsteady, that he resumed his place with an air of relief.

The first witnesses called were some of the household, whose testimony was slight and unimportant. They told merely of the want of harmony which existed at Blair Gates, said that the husband and wife were but little together—that Mrs. Blair was often moping and miserable, her husband moody and irritable—and that they saw each other as little as possible, save when they were in company.

No. 14.—Knitted Galter.

The next witness was Mr. Powle, but his deposition said merely that he had been called in by Dr. Mackenzie; that, in company with that gentleman, he had made the *post mortem* examination, and found arsenic in the body of the deceased but he had only seen Mrs. Blair for a few moments during her husband's illness.

"Will you tell us what passed during those few minutes?" said the counsel.

"To the best of my recollection, Mrs. Blair came into the room unsummoned, and her husband held out his hand to her, asking why she had not come to him before."

"What was her reply?"

"She said she did not know he wanted her; and he said he had sent for her."

"Well?"

"The housekeeper, who was standing by, said she had not told her mistress, as the doctors had wished him to be kept quiet."

"Was anything else said?"

"Yes; Mr. Blair refused persistently to drink a mixture Dr. Mackenzie thought necessary, and the housekeeper thought if Mrs. Blair offered it he might be willing."

"Did she do so?"

"Yes, she took the glass, and begged him to drink it. He said it was some wretched poison or other."—To be continued.

For Women.

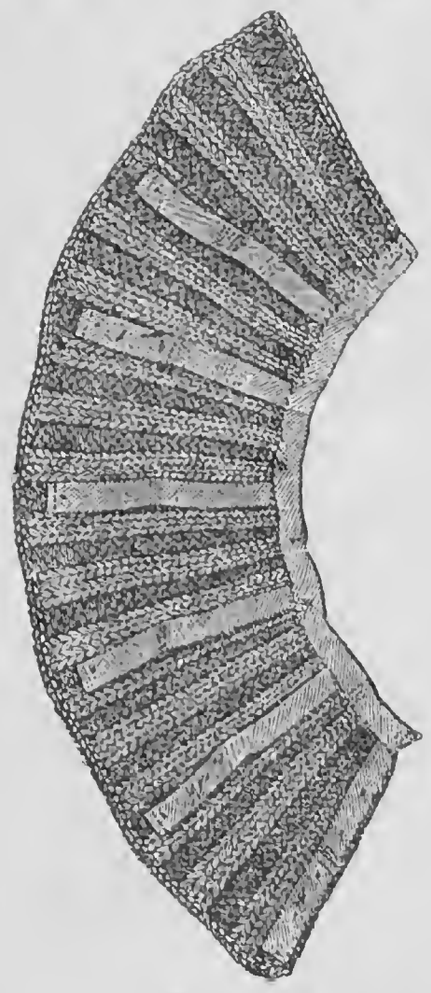
CONDUCTED BY MISS FAITH RIPLEY.

CORRESPONDENTS' CORNER.

Bitter-Sweet on "In Folly's Net."

MY DEAR MISS RIPLEY:—I was once standing before an unfinished painting, and casually ventured a remark on the coloring. My artist-friend turned quickly and said half angrily, "that shows how much you know about art—no true artist ever criticises a picture till it is finished." I have always remembered the rebuke and refrained from criticising any work that was incomplete.

As I was brought up in strict sense a Puritan—and I trust retain many of the good old principles—I would ask to be allowed space for a few thoughts, suggested by reading "A Puritanic view of 'In Folly's Net.'"



Nos. 15 & 16.—Deep Knitted Band for Petticoats.

I do not think our editor would admit a story to his columns that he did not know "the end from the beginning," nor would he accept one that the moral influence was not on the side of right. Flirting is made by many of the writers of the present day a pleasant pastime, that provokes a quarrel; and after a few tears and explanations the cloud passes and the sun shines brighter than ever; when in point of fact flirting is a dire evil, wrecking the happiness of many lives; and casting a shadow as dark and deep on American life as ever fell on those of "Lords and Ladies." I doubt not there are many women in real life to-day, as miserable as Jean is represented to be. Our young people must be taught what to shun as well as what to emulate. If Jean's trials could turn the tide of many gay thoughtless girls both the writer of the story as well as the editor will achieve a success. One point especially worthy of note, and we should do well to impress it upon the minds of our daughters—is that true love—shields the object of devotion from doing as well as seek their happiness.

In American society there are many men equally as bad as Mr. Blair, who may learn a lesson from his untimely end.

We must teach our young people to separate the wheat from the chaff. We should be especially thankful that the laws of our land are far superior to those of "Bonnie Scotland." BITTER-SWEET.

CAN you or any of your subscribers tell me of anything that will prevent the hair from falling out, strengthen the roots and make it grow?

Trappe, Md. SUBSCRIBER.

ANS.—Vigorous brushing free use of cold water, and the application of Vaseline night and morning are best methods known to us. Possibly, some reader may know of another remedy. We strongly advise you against all patent hair restoratives.

DEAR MISS RIPLEY:—I wish to purchase a good, cheap dictionary, what one would you recommend?

ANS.—Webster's Pocket Edition Dictionary, price $1.00. Several dictionaries are advertised at lower rates, but almost without exception, they are worthless. The one we recommend you to purchase, is *the* standard, and of course thoroughly reliable, an indispensable attribute in books of this class.

KNITTED AND CROCHETTED GOODS.—On page 826 we publish illustrations of knitted goods to which we invite the attention of our lady patrons. We have been at great pains to select and arrange these engravings and in order that they may be of the greatest benefit it has been decided to give fullest possible descriptions. This will necessitate our devoting several columns to merely descriptive matter and as we will not have the space to spare for a week or two, the RURAL of Jan. 6, 1880 has been selected as the earliest issue in which the knitted goods can be described.

FEMININITIES IN BRIEF.

Trimming extending down the sack-shaped cloak or mantle is greatly admired. A succession of broad tabs of velvet bordered with satin cording, placed with the point of each overlapping the upper part of the one below, and with a jet ornament sparkling on every tab, is a stylish method.

THE rage for Oriental effects in designs and combinations of colors, extends to all classes of goods, whether intended for personal adornment or for house-furnishing, and to meet the ever-increasing partiality for floor-coverings of this style Messrs. J. & J. Dobson show some exquisite rugs and carpets in Persian and other Oriental patterns, which are, by the way, marvels of cheapness.

JACKETS made out of Indian shawls are worn on chilly days by wealthy Parisians. They are *demi-ajustees*, have wide sleeves, and are trimmed with rich fringe, in which the several colors of the cashmere are repeated. The handsomest are made out of gold-embroidered shawls; it is, however, very easy to outline the designs on a cashmere shawl with gold thread; and many ladies have succeeded admirably in bringing the pattern into relief and adding to its richness by this means.

The new styles of table linen have designs in white of a marine view, a landscape, a gothic cathedral, pagodas covered with creeping plants, columns and vases, chariots and the chase; also, lotus flowers on a panel that represents the glistening water of the lake, and the material is pink, gray or buff damask, with colored borders or trimmed with colored fringes, and even laces are used. Silk damask and embroidered linen are employed, and even black satin.

Enamelled buttons, in the shape of a slender bar about a quarter of an inch wide, finished with designs in gold and black, sapphire, dark blue, brown, gray or garnet, are fashionable on black goods and other fabrics of medium value. Steel is shaped in similar style, and pearl buttons, either round or long, are sometimes enamelled with gold. The bar-form, about half an inch wide, is equally popular. Dark buttons, inlaid with pearl flowers and various other designs, are selected for dark-colored silk, or fine wool goods.

TO FIX SEAWEEDS IN BOOKS.—If not too fine, the weeds must be soaked in salt and water, then dried in a towel, laid on a table or suitable board, and pasted over on one side with a camel's-hair brush or pencil dipped in a solution of gumdragon; the gummed side must be applied to the paper; when this is satisfactorily achieved, for which patience is exceedingly requisite, stretch a piece of clear muslin over the specimen, and then put eight or ten pieces of blotting-paper, cut to size, upon it, afterwards placing a heavy weight on the top. Leave it for twenty-four hours, then remove the top, gently take the blotting-paper and muslin, and replace them by fresh pieces, taking great care not to disturb the specimens in the least degree. In three or four days, if the weather be dry, the specimens will be dry also. They will retain their color for years, if prepared as above, directly after they come from their briny home.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

"HOW TO MAKE GOOD COFFEE."

MARY WAGER-FISHER.

I AM often amused at the various recipes I see for making coffee. At our table we *never* have poor coffee, because the making of it is so simple that no skill is required in its preparation. In the first place, I buy the coffee green—unburnt Java and Rio, which I mix before burning—a third of the latter to two-thirds of the former. Mocha I use pure. Once a week I have coffee burnt, so that is always comparatively fresh.

My coffee-pot is a filterer—commonly called the "French Coffee-pot." It is a very nice-looking machine, will hold coffee for a dozen persons, and it cost $1.10. When breakfast is ready to be served, the coffee is ground, put in the filterer, and *boiling* water slowly poured in from the tea-kettle. Then the cover is put on the pot—the cover being already on the spout—and the coffee is made, with scarcely a breath of the aroma lost. When the coffee is poured out it is as clear as amber and as delicious as—coffee! Then we drink it without milk, because milk destroys the flavor, and renders the coffee indigestible. If your cook, or coffee-maker, pours into the filter water which is *not* boiling, you will know it at once—the coffee will have a dead taste. A very little practice will enable one to tell when she has poured enough water into the filter, by the weight of the coffee-pot, for she can't well look inside to *see* the amount. Of course, the nicest and daintiest way to make both coffee and tea, is at the table. But, for this one requires a nicely polished tea-kettle with a burner under it, and this pretty arrangement costs from 10 to 15 dollars; but it is a machine that will last for generations, with good care.

But to go back to my coffee making. After breakfast the coffee liquid and coffee grounds are poured into a coffee-pot of the ordinary kind. This, when boiled, makes quite as good a drink as the ordinary mode of making coffee, and serves for such members of the family as prefer their coffee *boiled*. But even if no further use is made of the "grounds" I think the French method is *more* economical than the American or English way of preparing coffee. The grains should be ground fine, as the hot water more readily extracts the flavor. Anybody who has the French Coffee-pot for sale will tell you how to use it if you need to be told. It is hardly necessary to add that the coffee-pot after use should be rinsed in hot water and well dried. With proper care, it will last for several years. In conclusion, I may say that I am convinced beyond all doubt that there is no way so good to make coffee as the one I have described, and none so simple and expeditious.

Bryn Mawr, Pa.

A MEETING OF THE KITCHEN CLUB.

MRS. ANNIE L. JACK.

THE Kitchen Club held its first meeting for the season at our house, and it was one of great interest to us all. As many of the ladies live at some distance, we always have an early tea, and there is a by-law that provides only one kind of cake shall be allowed on the table, the recipe for which is to be handed to the Secretary, and is open to be copied by any of the ladies present. It being near the time for Christmas baking, mine had been a fruit-cake that would *keep*, and which I transcribe for the benefit of readers: 1 lb. powdered sugar, 1 lb. butter, 1 lb. flour, 10 large or 12 small eggs, which are about equal to a pound; 1 lb. currants, washed, *dried* and dredged; 1 lb. raisins, seeded with a raisin-stoner; half a pound of candied peel, a little nutmeg, cloves and cinnamon. I cream the butter and sugar and add the yelks of eggs; beat well and then add half the flour; then the whites, after being whipped to a froth, and the rest of the flour. A wineglassful of brandy helps to keep the cake moist and fresh; but, if objected to on temperance principles, I have found icing as soon as cool quite satisfactory. And a cake thus treated remains good after three months' keeping, if *kept locked up*.

One lady of the club did not see the point in regard to "locking;" but I remembered, when explaining wherein the necessity of it lay, that there were no children in her household.

The subject under discussion was boiling, and a lady present read a valuable article from Scribner's on the subject. My own opinion was given chiefly in regard to vegetables. On this point I mentioned, from practical experience, the fact that all vegetables were more easily boiled and retained color and flavor better when put into *soft boiling* water, than when boiled in hard water, regardless of the time when put in. Miss Corson gives the following table for vegetables, when neither too old nor too new:—"Spinach, 10 to 15 minutes; peas, cauliflower and asparagus, 15 to 20 minutes; potatoes, cabbage, corn and string beans, 20 to 30 minutes; turnips, onions and squash, 20 to 40 minutes; beets, carrots and parsnips, one hour." My own experience would place turnips among the last-named on the list. One hint given by the same lady I have found useful in regard to turnips: "A lump of sugar boiled with them neutralizes their bitterness." Potatoes of all kinds, but especially sweet, are often spoiled by injudicious selection, and the small ones found quite watery while awaiting the cooking of the larger ones.

In regard to meat, it was conceded that boiling was the most economical method of cooking; for, if properly done, it preserves all the nourishing juices. The meat should always be put into *boiling* water and boiled five minutes. This, according to Liebig, coagulates the albumen, so as to crust the surface and keep in the juices; after this, cold water is added, the temperature reduced to 165° Fahr., and this gentle heat kept up through the process of cooking, which is till the meat is tender.

With many added bits of wisdom, our meeting closed, one little lady, a novice as yet, remarking regarding the last-mentioned item, "Who would think of looking for a thermometer in the dinner-pot!"

DOMESTIC RECIPES.

House Plants, Chicken Pot-Pie.

Plants should now be washed thoroughly every week with strong soap-suds (any kind of soap will do). The large plants as Abutilons, Oleanders, etc., I take into the kitchen, set them in an empty tub on the floor, stand on a stool and pour suds over them. After such treatment there will be no more "brown scales" found on them, such as Mrs. B—— in the RURAL for Nov. 8, complained of. Liquid manure should be applied freely. In December I dissolve a handful of glue in a pail of warm water and pour around the roots a few times. I think it starts the blossoms sooner.

I have had chicken pot-pie three days in succession for dinner, and it has been, good, better, best. After the chicken is cooked sufficiently, I take it out into the dish that I send it to the table in; then season the soup, or the liquor the chicken was boiled in, highly, with butter, pepper and salt, taking care there shall be enough soup to cover the pastry while boiling. To make the pastry:—one pint of rich buttermilk, a teaspoonful of soda, a piece of butter the size of a hen's egg; mix with flour very hard, cut in slices half an inch thick and about three inches square, drop in while *boiling*, and keep boiling till done—covered tight; after a few minutes, I set it on top of stove to keep from burning. When done, pour over the chicken in the dish. MRS. C. F. REYNOLDS.

Sausage Meat.

Two ounces of pepper, one-half pound of salt and two teacupsful of pulverized sage to twenty pounds of meat. MISS CRONK.

Christmas Plum Pudding.

One quart of fine bread crumbs, eight eggs beaten separately, pint of sugar, quart of seeded raisins, pint of currants, quart of chopped apples, pint of chopped suet, grated nutmeg, teaspoonful each of salt and cinnamon, and a teacupful of milk. Into a large bowl, put the beaten yelks, sugar, spice and milk, stir in the floured fruit and apple, with bread crumbs and suet, adding whites and enough flour—a quart will be sufficient for fruit and all—to make the ingredients stick together. Dip a pudding cloth into hot water, dredge on inside a thick coating of flour, put in the pudding, tie tightly, allowing room to swell and steam three hours and a half.

Send to table with a sprig of evergreen stuck in the top. Eat with hard and liquid sauce.

MARY B.

QUESTIONS ANSWERED.

Orange Jelly.

Please give directions for the above.

MRS. E. L. B.

ANS.—Soak one box of Cox's gelatine in a pint of cold water for an hour, then add a pint of boiling water, a pint of orange juice and a pound of white sugar; bring to the boiling point, strain through a jelly-bag and pour into molds.

Corn Starch Cake.

Please give directions for the above.

MISS. E.

ANS.—One cup of granulated sugar, half a cup of butter, whites of four eggs beaten to a stiff froth, half a cup of sweet milk, one cup of sifted flour, half a cup of corn starch (Gilbert's), two even teaspoonsful of baking powder. Flavor with almond. Cream the butter and sugar, add the milk, then the corn starch, beat well, whip in the whites, then the flour with the yeast powder. Bake in a very moderate oven. The success of the cake depends upon the baking.

News of the Week.

AGRICULTURAL NEWS.

The total number of bushels of grain received at this port during the past four years through the canals, from the opening to the closing of navigation and until the present time this year, is as follows:

1876	27,563,032
1877	48,438,209
1878	68,438,801
1879 (so far)	53,889,040

There are about 20,000 bushels afloat for this port, which may or may not get through before the ice closes the canals. . . Napa Valley, Cal., produced 1,700,000 gallons of wine this fall. . . Stealing a $10 horse lately cost a Colorado man his life though he had been tried and acquitted five different times for murder. . . So depressed is the value of land in Ireland, that of seven estates offered for sale on Nov. 7, four only were sold at low figures, while for two there was no bid. . . T. L. Miller, of Beecher, Ill., writes us that the Hereford Herd Book, for cattle of that fine breed in this country, will be in the printer's hands by January 1st, 1880. . . The Conn. State Board of Agriculture will hold its winter's Farmers' Convention at Willimantic, Dec. 17, 18, 19. Among the chief speakers will be Richard Goodman, T. S. Gold, Hon. E. H. Hyde, Dr. E. L. Sturtevant, Profs. Cressy and Brewer. . . The College of Agriculture of the Illinois Industrial University will hold its annual course of lectures and discussions on agricultural topics during the last week of Jan., commencing Jan. 27. All farmers with their wives are cordially invited to attend *gratis*. Reduced rates on railroads, and cheap board and lodging are held out as additional attractions. . . On Tuesday last Mr. Gillette, of Iowa, introduced a resolution into the House sympathizing with the people of Ireland in their present alarming condition from threatened famine and in their efforts to obtain relief from the oppressive landlord system, and hoping that arrangements may be speedily made by which the Irish peasants may become the owners of the soil they cultivate. . . . Florida is planting fig trees. . . . Many English tenant farmers, with a capital of from $1,000 to $5,000, are writing to this country as to the desirability of settling in Oregon. . . . The Denver News says that the portion of the Union west of a line drawn north and south through Denver is good for mining and grazing, but not for agriculture—surely California and Oregon are not included. . . . Some time ago Lord Beaconsfield called Manitoba the Farmer's Paradise; now a special correspondent sent out by the London Times to investigate the place, says there is an enormous amount of good land there, but that prudent emigrants find fault with the lack of cheap and convenient transportation. . . The weather prophets are coming out strong once more. Many of our farmers along the Hudson River who foretell the weather by watching the action of animals during the fall, predict a mild winter. Vernon, the Canadian prophet, and Blake, the Illinois weather-wise man inclines to the same opinion. . . There are in Ireland 526,628 tenants at will—that is, who can be ruthlessly evicted at once whenever their landlords may wish to turn them out. Taking the average of each household at five, this would give 2,106,512 persons who are dependent on sufferance for a home. . . Nearly all the rivers and brooks in Transylvania have overflowed their banks, laying under water vast tracts of country and destroying bridges and houses, interrupting communication and sweeping away farming utensils, cattle and grain. In some cases the inhabitants were for days on trees and roofs of houses awaiting rescue. The overflowing of the rivers Coros and Maros has caused fearful destruction. The city of Arad, on the Maros, and several other towns have been ruined and their inhabitants driven away. Fully ten thousands persons have been rendered homeless. The News' Pesth despatch says six villages have been ruined by the flood near Arad. Many entire families who had found refuge in neighboring woods were frozen to death. Several hundred persons are missing. . . As a preparation for Christmas 20,000 turkeys are expected in Liverpool from this country. Ireland has hitherto been the chief source of extraneous supply. . . At the annual meeting of the Russian Society of Political Economy a report was read, which, in its conclusions, might very well be taken for an essay on the state of Ireland, if only the names were altered. The member who prepared it said that it would be well to think of replacing the nobility by another class as owners of the soil; that the peasants should be placed in a position to purchase the land at a price which would render it possible for them to cultivate it with profit. Another speaker insisted on the necessity of the government being compelled to aid the movement by legal agitation, and although the discussion was adjourned the feeling was in favor of the proposal. There is a smack of the universal feeling of the benefits of a peasant proprietary about the debates at the Russian meeting. . . Some months ago, as noted here at the time, the Produce Exchange of this city, passed a resolution to the effect that all produce should be sold in this market by the cental system of 100 pounds, instead of by the present denomination of bushels, etc., the change to take place on Jan. 1, 1880. The proposed change has had many bitter opponents, however, and finally, on last Saturday, a vote was taken on the question whether the former resolution should be rescinded or not. The total number of votes cast was 1,273, of which 668 were against rescinding and 605 in favor of it, so that, according to this decision, the cental system comes into use here after New Year's Day. Nearly all the grain operators voted in favor of rescinding, and threaten to secede and form a new Grain and Flour Exchange. . . The Canadian prohibition against the importation of cattle from the United States is, says an English paper, having a damaging effect on the Dominion export trade. As an instance, a dealer at Belleville, Ont., who recently received an English order for 2,000 prime head of cattle for the Christmas market was compelled to execute it from Boston, Mass., owing to his inability to find suitable stock in Canada. . . Our old prophecy has come true. The Missouri State Grange Association has issued an address contradicting the report that they are opposed to immigration of farmers, mechanics and others to that fine State. They extend a cordial welcome to all honest and worthy new-comers . . The Erie Canal was closed at Albany at 12 o'clock on the night of the 6th inst., for the winter. No more boats were allowed to go Westward after that hour. . . The N. O. Cotton Exchange says that all reports indicate an increase in the total crop as compared with last year's, of 12 per cent. in La., 15 per cent. in Miss., 23 per cent. in Arkansas. . . The Nat. Association for preventing oleomargarine frauds has $3,000 on hand, and intends to make things lively here for tricky grease-butter sellers. . . In the Sagua district in Cuba there will be a falling off of 20 per cent. in sugar, owing to poor cane. Trinidad expects an unusually large sugar crop. . . The cattle plague has broken out in England's new possessions—the island of Cyprus.

Pilgrimages to Buffalo, N. Y.,

are made by thousands of invalids annually to consult with the medical and surgical staff of the World's Dispensary and Invalid's Hotel, the largest private sanitarium in the world. All chronic diseases are treated by scientific methods. The practice is divided among nine eminent specialists. Among the most popular domestic medicines in the land are those manufactured by this Association, among which are Dr. Pierce's Golden Medical Discovery, the greatest of alteratives or blood-cleansers, and Dr. Pierce's Pellets (little pills) that have largely superseded the old-fashioned coarse pills. Compound Extract of Smart-Weed is deservedly popular as a remedy for diarrhœa, dysentery, flux, and kindred diseases; also as a pain-killer and remedy for colds. Dr. Sage's Catarrh Remedy is the "Old Reliable." Invalids' Guide-Book—10 cents, post-paid. Address World's Dyspensary Medical Association, Buffalo, N. Y., or London, England.

EGGLESTON TRUSS CO.—*Gents:*—I purchased one of your Trusses in October, and it has proved in every way as recommended. I had two ruptures, one healed very soon, the other was longer in becoming perfectly sound, but is now all right. There is surely one Truss firm who are square men, and do all they promise, even though that promise is a permanent cure. Yours,

Malden Bridge, N. Y. W. S. MOORE.

A Paper for Young People.

The *Youth's Companion*, of Boston, employs the same writers as the best English and American magazines, and no other publication for the family furnishes so much entertainment and instruction of a superior order for so low a price. Its illustrations are by our best artists, and it has recently been greatly enlarged.

Oh, how refreshing, palatable and reviving is a draught of cool water with Hop Bitters in it, to a fevered patient.

FOR RELIEVING THROAT TROUBLES, "*Brown's Bronchial Troches*" have a world-wide reputation, and as they contain nothing that will injure the system, they can be used without fear of bad results.

The habit of running over boots or shoes corrected with Lyon's Patent Heel Stiffeners.

The Markets.

THE GIST OF THE MARKETS.

An examination of this week's reports of the condition of the produce markets in the chief collecting centers will show that the general drift of prices for grain is still upwards; and indeed, with brief fluctuations, this will probably continue to be the case during at least most of the winter; not, perhaps, in all sorts of produce, but as a general rule. This is strongly indicated by the speculative prices for future delivery, and is the general experience of past years. A glance at the summary of the nature of the week's operations at each of our chief markets, prefixed, for convenience's sake, to our regular reports, will show that the advance has by no means been uniform, even in the different grades of the same product in the same place. For instance, look at the difference in the advances in different grades of wheat at Philadelphia, Chicago and Baltimore; while the rise in oats varies all the way from just a shade in Philadelphia and New Orleans to 4½c. in Toledo, and 7c. on No. 2 in Detroit. Because there's an upward movement on some kinds of goods in a market, therefore, or even in some grades of the same product, it would be unsafe to believe, as we have known some farmers to do, that the rise is general. Of course, the same rule holds true with regard to a fall also. The decline in the price of hogs at the chief packing points is probably only temporary, and is, most likely, due to the unfavorable weather for packing, and to an extra supply sent forward on account of the recent sharp rise in prices.

Mail advices from England, under date of Dec. 1, tell of a very reluctant upward movement of prices for American grain. Owing to the unusually severe weather all over northern and middle Europe, shipments from the frozen Baltic had almost ceased. At that date the wheat afloat on the way to Great Britain amounted to 16,160,000 bushels, coming from California, our Atlantic ports, Chili, India, Russia and Australia proportionately in the order of their names here, the first sending 9,200,000 bushels, and the last 400,000. This, with the large

stock accumulated on hand, it was hoped would suffice for winter—but, probably, only on condition that the famine now pressing sorely in some parts of Ireland, should extend its ravages to England also.

A cablegram of the 9th inst., from London, quotes the Mark Lane Express as saying that English farmers have not suffered much owing to the early frosts, but in Scotland plowing is in arrear; 668,272 bushels of foreign wheat had arrived in London during the previous week, and 1,680,000 bushels in Liverpool during the previous fortnight. Though in excess of present requirements, these supplies did not depress the market, owing to stiff prices here, the closing of shipments from the Baltic, and the expected stoppage, or great curtailment, of those from the Black Sea. This country is said to hold the key, and other nations must pay what America demands. Maize went up 1½c. a bushel in consequence of a scant supply. Oats were hard to sell at from ½c. to 1½c. a bushel reduction on account of a heavy supply from Russia. The sales of English wheat were 307,424 bushels, at 46s., 7d., against 462,848 bushels, at 40s., 11d., during the corresponding week last year. Wheat, No. 3 spring, steady at 10s., 6d. per 100 lbs.; No. 2 spring steady at 11s.; new winter Western steady at 11s., 7d.—an advance of 4c. per 100 lbs. in each grade since our last week's report. American cheese, choice, 66s. per cwt.

SPECIALS FROM ALL CENTERS.

Until Saturday, Dec. 13.

Baltimore.—During the week Southern red wheat advanced 10c. per bushel, do. amber, from 3c. to 5c.; Western winter red from 6@6½; corn went up from 3c. to 5c. on Southern white and yellow, and from 5c. to 6c. on Western; oats fell 1c. on Southern white and remained pretty steady on other grades. Rye advanced from 4c. to 7c. Hay, butter and eggs stationary. WHEAT—Southern red $1.53@1.55, do. amber $1.55@1.63, No. 2 Western winter red, spot and Dec., $1 56@1.56½; Jan. $1.58@1.58½; Feb. $1.60½@1.60¾. CORN—steady for spot and easier for futures; Southern white, 62@63c.; do. yellow 63@65c.; Western mixed, spot 67¼@67½c. OATS—Southern 45@47c.; Western white 47@48c.; mixed 45@46½c.; Penn. and Md. 47@48c. RYE—90@95c. HAY—Prime to to choice Penn. and Md. $17@18. BUTTER—Prime to choice Western packed 23@28c.; roll 20@25c. EGGS—Fresh 22c.; limed 16@18c. COTTON—Middling 13¼c.; low middling 12¾c.; good ordinary 12¾c. Weekly net receipts, 1,634 bales; gross, 6,093; total exports 5,158; sales 2,956; spinners 315.

Boston.—During the week corn remained steady; oats advanced from 2c. to 3c. with a further advance demanded at the close; rye, a shade higher; shorts went up from 50c. to $1; fine feed, 50c.; middlings, steady. CORN—New mixed and yellow, 63@65c.; old, 65@68c. OATS—53@55c. for No. 1 and extra white; 52@53c. for No. 2 white; 49½50c. for No. 2 mixed and No. 3 white. RYE—95c.@$1. FEED—Shorts, $17,50; fine feed, $17.50@18; middlings, $19@20. COTTON—Middling, 13¾; low middling, 12¾c., good ordinary, 12¾c. Weekly net receipts, 11,880; gross 23,525; exports, all to Great Britain, 5,308. BRIGHTON CATTLE MARKET—Beef Cattle per 100 lbs. live weight; extra quality, $5.50@5.75; first quality, $5@$5.37½; second quality $4.50@$4.87½; third quality $4.12½@4.37½; poorest grades of coarse oxen, bulls, etc., $3@4.50. Though the prices have not fallen off during the week, the class of cattle brought to market has been poorer; but few sales were made at the quotations. Little or no demand for cattle for export at this time. MILCH COWS—Extra, $45@65; ordinary, $20@43; farrow cows, $11@27; springers, $18@50. SHEEP AND LAMBS—Those from the west cost 4½@5¾ live weight, landed at Brighton.

Chicago.—During the week No. 2 red winter wheat and No. 2 Chicago spring advanced 1c. per bush. and rejected 1c; corn is a shade higher; oats 1¾c. higher; rye went up 4c. and barley fell 1½c. Timothy seed dropped from 5 to 9c. and flax seed 2c. Owing to warm weather and heavy delliveries, hogs dropped from 25c. to 40c. Cattle and sheep were pretty steady with a shade higher prices. WHEAT. No. 2 red winter $1.31; No. 2 Chicago spring $1.29¼ cash; $1 29¼ Dec. $1.30¾ Jan; $1.32c. Feb. No. 3, do. $1.15; rejected 97c. CORN.—41¼@41c. cash; 41¾ Jan; 42c. Feb; 47c. bid for May delivery; rejected 38¾c. OATS.—35¾c. cash; 34¾@35c. Dec.; 35¼ Jan; 35⅝ Feb; 40½c. May. RYE 79c. BARLEY 89¼' SEEDS.—Timothy $2.45@2 65; flax seed, pure $1 47. HOGS.—Mixed packing $4.45@4.65; choice heavy $4.70@4 80; light $4.50@4.65. CATTLE.—Common to fair shipping $3.50@4 25; good to choice $4 50@5; some Christmas cattle $5.45@5.75; butcher's $2.25@3.25; feeders and stockers $2.50@3.50; Texans $2 @353.90 SHEEP. $3.50@4,75.

Cincinnati.—Since last report wheat has gone up from 4c. to 5c. per bushel; corn is a shade higher; oats from 1c. to 3c higher. Rye has advanced 7c., and barley is about the same as at last report, with a slight upward movement in the best grades. Butter is stationary. There have been considerable small fluctuations in prices of hogs, and at the close they were a trifle lower than at last report. WHEAT, $1.33@1.36. CORN, 41@45c. OATS, 39@41c. RYE, 93@95c. BARLEY, 90@95c. BUTTER—Choice Western Reserve, 22@23c.; prime do., 18@20c.; prime to choice Central Ohio, 17@19c. HOGS—Common, $3.80@4.15; light, $4.20@4.50; packing, $4 60@4.80; butchers', $4.80@4.85. COTTON—Middling, 12¾c.; low middling, 12c.; good ordinary, 11¾c. Weekly receipts, 15,421 bales; shipments, 15,029; sales, 1,361; spinners, 200.

Detroit.—Since last report wheat went up from 4c. to 5¾c.; corn a shade higher on lower grades; oats advanced from 1c. on best grades to 7c. on No. 2 mixed Clover seed has a slight downward tendency in the absence of a demand for it. WHEAT.—Extra white Mich., $1.39½; No. 1 white Mich., $1.38¾ cash and Dec.; $1.39 Jan.; $1.42 Feb.; $1.44¾ March; No. 1 Milling, $1.33; No. 1 amber Mich., $1 38¾; No. 2 red Mich., $1.38¼. CORN—No. 1 yellow, 49c.; high mixed, 47½c.; No. 1 mixed 47c; No. 2 mixed, 45c. OATS—Strong and scarce, No 1 white, 39½; No. 2 white, 38; No. 1 mixed, 38¼; No. 2 mixed, 37. SEEDS—Clover in very limited demand; prime, $5.15; choice, $5.60. HOGS—Dressed firm at $5.30@5.35.

Indianapolis.—Since last report wheat has advanced from 5 to 6 ½c. per bush; corn, 4c; oats from 2 to 2½; while hogs have fallen from 30 to 40c. WHEAT.—No. 2 red $1.36½@$1.37. CORN.—42c. OATS—strong at 37½@39½c. HOGS.—quiet at $4.25@4.50.

Louisville.—During the week the range of prices of wheat has been somewhat larger than at date of last report, going from 1c. per bush. lower to 3c. per bush. higher; corn is from 2c. to 3c. higher; oats, 2c. higher, while rye has rushed up from 7c. to 9c. WHEAT firm at $1.27@$1.33. CORN fine; white 46c; mixed 44c. OATS white 40c; mixed 39c. RYE steady at 92c. COTTON—middling 12¾. Weekly receipts, 818 bales; shipments, 592; sales, 579; spinners, 7; stock on hand 2,505.

Milwaukee.—Since last report wheat has advanced fully 5c. per bush. on all grades both for cash and for future delivery. Corn has moved up 2c; oats ½c; and rye 3c. while barley fell 2c, having gained 3c. the previus week. WHEAT.—No. 1. Milwaukee hard $1.31; do. soft $1.30½; No. 2. Milwaukee $1.29¾ spot and Dec. $1.30¾ Jan; $1.32¾ Feb; No. 3 do. at $1.14½; No. 4 do. $1.06; rejected at 97c. CORN.—No. 2. 42c. OATS. No. 2. 35c. RYE.—No. 1 78½c. BARLEY. No. 2 spring 75½c.

New Orleans.—Since last report corn has been steady; oats are a shade lower; of hay there is none in the wholesale market, but the present high prices will probably soon bring so abundant a supply that prices will, ere long, be more reasonable. Sugar and rice are a shade lower, and bran has dropped 5c. Cotton is stationary. CORN—In good demand at 56@57c. OATS—active at 49@50c. HAY—$25; this was the last wholesale quotation on Tuesday last, since which date it has been held considerably higher at retail, as there has been none in first hands. SUGAR—Inferior 4@5c.; common to good common 5¼@5¾c.; fair to fully fair 6@6¾c.; prime to choice 7@7¼c.; yellow clarified 7¾@8¼c. RICE—Louisiana, ordinary to choice, 6¾@7¼c. BRAN—80c. COTTON—middling 12c.; low middling 11¾c.; good ordinary 11¾c. Net receipts during week 61,854 bales; gross 74,713; total weekly exports 51,326; sales 44,100; stock 268,755 bales.

Philadelphia.—During the week wheat has advanced, but very unequally for different grades:—Western rejected has risen 15c.; Penn. red about 7c.; Southern amber, 16c., and No. 2 red, 6¾c. Rye has gone up 2c.; corn has risen about the same as last week—from 1c. to 3c.; oats are just a shade higher; seeds steady; butter 1c. ₮ lb. lower all round; eggs steady; cheese stationary; cotton, do. WHEAT—Western rejected, $1.50; Penn. and Del. red, on track, $1.45@$1.55; Southern amber, $1.56; No. 2 red, in elevator, $1.55¼@$1.56; No. 2 red, $1.55¾, cash; $1.57¾ Jan. RYE—Scarce at 92c. CORN—Old Western mixed, on track, 62c.; new white, on track, 62@63c.; Southern yellow, ungraded, 60c. OATS—Good and choice white, 50@51c.; Del., 50@52c. SEEDS—Clover, 7@9¾c; flax wanted at $1.60@$1.65. FEED—Bran, 17.75@$18.50. BUTTER—Creamery, extra, 32@34c.; Bradford Co. and N. Y., extra, 29@31c.; Western reserve, 23@25c.; do., good to choice, 18@21c.; rolls Penn. and Western reserve, extras, 20@22c. EGGS—Penn., 24c.; Western, 22c. CHEESE—N. Y. factory, 13¾c.; Western full cream, 12¾@13c.; do., good, 11@12c.; do., half skims, 7@9c. Live chickens, 7c.; do. turkeys, 8@9c.; do. ducks, 7c.; dressed chickens, choice dry-picked, 8@10c.; or. dinary to good, 7@8c.; do., scalded, 5@6c. COTTON—Middling, 13¾c.; low middling, 13¼c.; good ordinary, 12¾c. Net Receipts for week, 2,258 bales; gross, 7,306; total exports, 1,677; sales, 6,570; spinners, 5,004.

St. Louis.—Since last report wheat has advanced from 1@2½c., according to grade, in spite of the fact that St. Louis millers lately declared that they couldn't grind at a profit, when prices ruled from 7@15c. lower than now. Corn a shade lower; oats steady; rye 1c. higher; hogs from 15@30c. lower; cattle somewhat higher. WHEAT.—No. 2 red fall, $1.35, cash; $1.37¾@1.39 for Jan.; $1.41¾@$1.43½ for Feb.; No. 3 red fall, $1.25¾@$1.26. CORN.—36¾@36¾c., cash; 36⅞c for Dec.; 37¾@38c. for Jan.; 39c. for Feb.; 40¾@40¾c for March. OATS.—38¼c, cash; 38¾c Jan.; 39@39¼c Feb. RYE.—80c. BARLEY.—choice, 85c. HOGS.—Light to heavy shipping at $4.10@4.60; packing, $4.30@4.60; butchers' to select, $4.50@5.00. CATTLE.—Fair shipping steers 5,40@6,450; good, $4.60@4.75; cows and heifers, $2.50@3.10; native butchers' steers, $3.75@4.25; Southwestern steers, $3.40@3.60; feeders, $3.50@3.75. SHEEP.—Scarce and firm; fair to fancy, $3@$4. COTTON.—Middling 12c.; good ordinary, 11¾c.; weekly receipts, 24,456 bales; shipments, 19,047; sales, 7,282.

Toledo.—During the week wheat advanced from 5¾c. to 6c; corn went up 2c, on high mixed 1½c. on No. 2 and fell ½c. on rejected; oats have risen 4½c. and clover seed 15c. on prime. WHEAT.—No. 1. white Mich. $1.38; amber Mich; spot, $1.41; No. 2 red winter, spot and Dec. $1.41¾; Jan. $1.42; Feb. $1.44½; March $1.47; Western amber $1.44. CORN—high mixed 45c; No. 2 ...ay 49¾; rejected 41¾. OATS.—No. 2 spot 41c; Feb. 42c. SEEDS clover, choice, $5.35; prime $5. 25; No. 2, $5 bid.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Dec. 13.

BEANS AND PEAS.—Heavy receipts of beans continue to depress a market that has not opened a wholesale winter call. Prices have been marked down to nearly the whole list, and for local use dealers regard the month as about lost. Considerable stock is going through eastward. Green peas easy with a larger offering, and Southern B. E. peas in good supply; selling price not above: Marrow beans, $1.54@1.65; medium, $1.35@1.50; pea, $1.70@1.85; white kidney, $1.80@2.05; red do., prime, $1.90; poor, $1.70@1.80; black $1.85@1.90.

Receipts of beans for week, 20,408 bush.; exports, 1,798 bbls.

BUTTER.—Trade does not start off at the pace looked for by this date of December, but it is estimated that the whole product will be needed if only a fair export demand accompanies full local wants. Prices are still quoted at the reduction noted last week, but have ruled steady. Some of the later speculators have been anxious to realize, and when a buyer has been in treaty with a holder who has at all wavered in his early faith, he can use the point with a degree of effect upon regular dealers. The scale of quotations is almost as before, and as the market is quiet inside figures are oftenest quoted. Shippers have operated quite freely, considering the prices. Fine lines of Western are not plenty for general use; the offering of creamery, however, is very full. State pails and tubs, small dairy and fresh ends, 29@30c.; best lines, 26@28c.; fair to good, 23@25c.; firkin and tub single dairies, 27@28c.; do. fair to prime, 22@26c.; do., firkins, choice dairies, 25c.; do. fair to prime, 22@23c.; Welsh tubs, 21@25c.; poor State 21@21c.; creamery, finest, 35c.; good to prime, 32@33c.; sweet cream, 32@33c.; poor to good, 26@32c.; Western imitation cream, 25@28c.; dairy, fresh, extra, 24@25c.; poor to good, 18@23c.; factory, late made, 20@22c.; poor to good, 18@18c.; very poor Western, 10@11c.; rolls, 20@22c.

Receipts for week, 22,611 pkgs.; do., exports, 6,118 do.

CHEESE.—The shipments for the week have been 43,523 boxes. The business has been at very steady prices, and the market generally is without important change.

Quotations are for State factory: Fancy, 13c.; good to prime, at 11¾@12¼c; fair to good, at 10¾@11¾c.; half-skimmed at 9¾@10c.; skimmed at 6¾8c. State farm dairy: Fine at 12¾@12¾c.; good to prime 10¾@12c.; fair to good at 9@10¾c.; skimmed at 6¾8c. Wis. factory: Fine at 12¾@12¾c.; good to prime at 11@12¾c. Ohio factory: Cheddar, fine, at 12¾@12¾c.; do., fair to good, 10@11c.; flat, fine, 12¾@12¾c.; flat, good to prime, 11¾@12¾c.; flat, fair to good, 10@11¾c.; half-skimmed, 9@10c.; skimmed, 6@8c.

Receipts for the week, 52,058 boxes; exports, 42,000 do.

Liverpool cable quotation, 65s. Steam to Liverpool, 30@35s.

DRIED FRUITS.—Apples move out well and at strong prices. Peaches have a poor sale and show no decided change. Small points are steadily held.

Apples—New North Carolina, at 6¾@8¾c. for fair; 10@10½c for choice; 11@11¾c. for fancy sliced. Patent evaporated apples, choice, in cases, 13@14c.; do. fair to good, 13¾@14¾c.; N.Y. State sliced new, 8@8¾c.; quarters, choice, 7¾@8¾; new southern quarters scarce and nominal; new North Carolina peeled peaches at 17@19c., do., Georgia, 13¾@16¾c. Peaches, Delaware evaporated, peeled at 25@28c.; do. unpeeled at 13@14c.; new halves at 8c. Blackberries at 9@10c. for new. Raspberries at 27@27½c. Pitted cherries at 18@19c.

Exports for week, 131 bbls. apples.

COTTON.—Trade has been liberal with an irregular sensitive market, closing at for Dec. 12.75@12.77c.; 12.90c. for Jan, 13.17@13.19c. for Feb.; 13.43@13.44c. for March; 13.60@13.62c. for April; 13.79@13.80c. for May; 13.94@13.96c. for June; 14.02@14.04c. for July, and 14.10@14.15c. for August.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

EGGS.—Receipts for the week, 6,230 bbls.; do. last week, 7,187 do. Re eipts are falling off, and for really prime marks their is some strength. Old or held lots of Western are irregular; after they have been sold they frequently return to seller. Limed in fair demand for bakers or mixing use.

Near points fresh, doz. 25@26c.; State and Pa., 21¾@23c.; Canadian 18@20c; Western, prime to extra, 21@22c. do. good, 19@20c; off grades, 18@18¾c.; Southern, 21@22c.; State limed, 16½@17c.; Canadian, 16@16½c.; Western, 15@16c.

FRESH FRUITS.—Exports of app'es for week, 8,585 bbls. From the rate that apples have gone abroad this year from a small crop, it would seem as though there were few to spare. Shippers, however, seem determined to obtain their full share, while the weather compels holders to be free sellers and take the chances of future comparative prices.

Spitz, ₮ bbl., $3@3.50; Baldwin, $1.50@2.75; Greenings, $2.25@2.50; mixed stored, 2.25@2.37; do. poor to fair, $1.50@2. Late arrivals are not of good keeping qualities. Cranberries hold a late advance—firmly. Cape Cod, fancy, per bbl., $8@8.50; fair to choice, $7@$6.75; other, Eastern, $6@$8; N. J. crates, $1.75@2.25. Box pears, per bush. $2@4; W. Nells and Lawrence, bbls., $3@4; Vicars, $2.50@3; not much inquiry. Grapes salable when strictly prime. Catawba cases, $1.75@3.75; do., loose, per lb., 4@6c. Florida oranges are improving in quality, but many have to be repacked. Choice, $3@3.50; hf. bbl cases mainly at $2.50@3; very common or rusty, $1.50@2. Peanuts in good demand for holiday trade. Hand-picked, 5@5¾c. ₮ lb.; do., good to choice, 3¾@4¼c.; shelled, Am., 4½@5½c.; do., Spanish, 3c.; shellbarks, 87c.@1; B. walnuts 60c.; Pecans, 9@10c.

FLOUR—Has shown a fair degree of activity, with exports for the week of 48,100 bbls., and prices steady.

Latest prices are $5.40@6.00 for inferior to fancy superfine State; $6.00@6.30 for inferior to good extra do., odd lots and lines; $6.30@6.50 or good to very choice do.; $5.40@6.00 for inferior to very fancy superfine Ind., Iowa, Michigan, &c.; (the latter an extreme): $6.00@6.30 for inferior to good shipping extra do., and $6.70@6.50 for good to fancy shipping extra do.; inferior to about choice white wheat extras, $6.25@7.25; choice to fancy do. at $7.25@8.50; red and amber winter wheat, inferior to fancy grade and family, at $6.10@8; round hoop Ohio, 6.10@6.50; and trade and family brands of do. at $6.60@ 8.00; the latter rate for very choice; St. Louis at $6.25@7.25 for inferior to very good extra; $7.25@8.50 for very good to fancy; Minnesota clear, very inferior to fancy, at $6 @7.25; Minnesota "straight," very inferior to fancy, at $6.50@8.10, and patent poor to very fancy, at $7 10 @9 00; unsound stock at from $4.50@6 50 city infill extra at $6.85@7.25 for about fair to choice for West Indies (fancy do. quoted at higher figures); do. for England, $6 00@6.40 for poor to choice; do. trade and family extras, $7,25@8 25; do. for South America, $6.90 @7.35; No. 2 at $4.50@5.35 for very poor to fancy.

GRAIN.—Wheat has shown sharp fluctuations, but has been active. The shipments for the week have reached 800,000 bushels. Prices closed easy.

Latest sales are or No. 1 amber at $1.55@1.53; No. 2 amber at $1.55@1.57; ungraded amber at $1.51@1.58; extra white at $1.55¼; No. 1 white at $1.51½@1.55; do., December option, at $1.51½@1.55; do., January, at $1.56@1.57; do., February, at $1.58¾@1 60; do., May, at $1.42; No. 2 white at $1.51@1.52; ungraded white at $1.50@1.52¾; No. 1 red at $1.58@1.58¾; No. 2 red at $1.57½@1.58¾; do., December option, at $1.57¾@ 1.58¼; do., January, at $1.59¾@1.61; do., February, at $1.61¾@1.64; No. 3 red at $1 47@1.49; ungraded red at $1.43@1.56; red Canada, in bond, at $1.52¾; No. 2 Chicago, at $1.47; New York No. 2 spring, at $1.45; No. 3 spring at $1.38¾@1.39; ungraded spring at $1 32 @1.41. Rye is at 97c. for prime State. Corn is offered lower and is fairly active; latest sales of New York No. 2 at 66¾@66¾c.; do., Dec., at 65¾c; do., Jan., at 64c.; New York steamer mixed at 63c.; do., Dec., at 63c; do., Jan., at 61¾@62c.; ungraded western mixed at 64@65½c. in store and afloat; No. 3 at 6?@62½c. Oats are in steady demand, with prices closing in the buyers favor; sales of New York No. 1 white at 55c.; New York No. 2 white at 51c.; New York No. 3 white at 51¾c; New York No. 1 at 52c; New York No. 2 at 51¾@52c.; do., December, at 51c.; do, January, at 51c. New York No. 3 at 49@50c.; ungraded white western at 51@51c.; ungraded mixed western at 50@ 52½c.; white State at 54c.; mixed State at 52@52½c; No. 2 Chicago at 52c. afloat.

HAY AND STRAW.—Prices are held very regular and the market fairly active. Shipping hay quoted at 60@62c.; retail lots at 70@80c. for medium, and 80 @85c. for prime; clover at 55@60c. Straw at 90c.@$1 for long rye; 65@75c. for short rye, and 55@60c. for oat.

Exports for week, 208 bdls.

HONEY—Sales though small are frequent enough to support prices; and the holiday demand may give quotations a lift. Single comb w. clover, ₮ lb, 18@ 18c.; larger, 14@16c.; buckwheat, 12@14c.; clover extracted, 11@13c.; strained, 8@10c.

HOPS.—Emmet Wells in his weekly circular says: "The export traffic has almost entirely ceased, 133 bales being the extent of the shipments this week. Brewers are holding off for lower prices, which is a very natural thing for them to do on a declining market. The butter and cheese fair, now being being held in the American Institute building, this city, has brought a large number of farmers to town, many of whom brought with them their hops, and have been forcing the same upon the market, accepting the best bids offered. The result is, some very fine parcels have been bought as low as 35c., which have brought from 38@39c. ₮ lb more through the legitimate channels of trade. This forced business compels us to reduce our quotations 3c. ₮ lb all round on new hops, Bavarian excepted. The German hops arriving here weigh about 400 lbs to the bale. Our brewers take them at the prices we quote as fast as they come along. Old hops, the same as in London, are entirely neglected."

Quotations are for New Yorks, new crop, choice, 38@40c.; New Yorks, new crop, medium, 34@36c.; New Yorks, new crop, low to fair, 30@32c.; Eastern, new crop, 30@38c.; Wisconsin, new crop, 30@38c.; Yearlings, 7@18c. Olds, all growths, 4@10c. Pacific coast, new, 35@40c.; Pacific coast, olds (nominal), 7@12c.; Bavarians, 50@65.

OIL-CAKE.—Western quoted at $33.50 ₮ ton.

POULTRY AND GAME.—The weather has been mild and moist and trade has missed several days. Bought fresh dressed is improving in demand and and the market is pretty clear of worst rubbish left by the Thanksgiving surplus. Some lots of Western that have come on by freight on a have turned poor and make the wide range noted. There is considerable stock in ice houses and dealer do not risk taking it out while the weather is variable. Some of it shows that it was held open too long, other cases that were carefully and timely housed are in good order.

Turkeys, Jersey and Pa., prime, 13@14c.; State, Northern Ohio and Mich. prime, 12@12½c. other Western, prime, 11@11½c.; fair to good, 8@10c.; Philadelphia, dry-picked, 14@15c.; do., chickens, 14@15c.; do., Jersey, per lb., 10@12c; do. State and Western, prime, 10@11c.; fair to good, 7@9c.; Phila fowls dry-picked, 12@13c.; N. J. do., 10@12c.; good to prime, State and Western, 8@10c.; poor do., 5@7c; Ducks, Phila., dry-picked, 14@15c; Jersey, 14@15c.; State, 11@13c.; Western, 10@12c. Geese, N. J., 12@12c.; State, 9@11c.; Western, 8@10c. For live poultry there is a fair demand at easy quotations. Fowls and chickens, 7@9c; turkeys, 9@11c. which is higher. Ducks, 40@70c; geese, extra, 1.75@$2; other, $1@1.50c.

Game is in good demand when quality is faultless. When the weather is variable buyers do not stock up for show as usual in winter and some trade has been lost in this way.

Wild Ducks Canvas-backs, Havre de Grace, $3 25@3.50, W. $3@3.25; North, $2.50@3; do. red-heads, 50@75c.; do. Western, 80@90c.; Mallards, 65@75c.; Teal, 40@50c. Black, 50@60c.; common 30 ₮ pair. Quail, trapped, ₮ doz., $1.25@2; Partridges, State, prime, ₮ pair, 90@$1; do. Western, 80@90c.; soft and drawn, 60@70c.; Grouse, 80c@$1. Tame pigeons, shot, ₮ doz., $1@1.25; Rabbits, ₮ pair, 30@35c.; Hares, 40@50c.; Minn. venison, saddles, ₮ lb., 13@14c.; other, 12@13c.; whole deer, 8@9c.

PROVISIONS.—Hog products have been active and closed firm. Mess pork quoted at $12 50@12.60 for December; $12.60 for sellers' option, old or new, for January; $14.25@14 30 for new do. for do, and $14.30@14.35 for Feb.; $14.40@14.45 for March. Bacon at 7¼@7¾c. for long clear and @7½7¾c. for short clear. Lard—Western steam at $8.05@8.10 for spot lots; $8.10@8.12½ for new for January; $8.20@8.25 for new for February; 8.30@8 32½ for new for March Stearine at 7¾@8c. for Western and 8¼@8¾ for city.

TOBACCO—Has not varied in price, ruling essentially as at the close of last week, with a fair trade.

SEED.—Grass are quiet. Clover quoted at 8¾@ 9¾c. for prime to choice, and 9¾c. for extra choice. Timothy at $2.75 for prime; Flaxseed at $1.75@2.00.

VEGETABLES.—The market continues loaded with potatoes and prices for State and Eastern are toned down by the offering of Nova Scotia. Red Peachblows, 25c. under white; prime white onions, scarce; prices for all firm. Pumpkins have advanced. Potatoes, Nova Scotia Rose, $.150@1.75; do. prolific, 1.37 @1.80; Mercer, $1.25@1.37; State Peachblows, d.-h., 2@$2.12; Snowflake, d.-h. $1.37@1 50; Early Rose, Maine, d.-h. $1.50@1.75; State, $1.37@1.62; do. in bulk, 1.25@1.50; do. Peerless, $1.25@1.50; N. J. Sweet potatoes, 2@2.25; the latter for kiln dried; squash, marrow, ₮ bbl., 75c; do., Hubbard, $1.25@1.50; cabbage, white, per 100, $4@5.; red do., cabbage, $5@6; onions, white, per bbl., $3 00@4.50; do, yellow, $2.50@2.75; do., red, $2.25@2.50; do., Chester, $1.75@$2.25; beets, $1@1.25; Russia turnips, 81c.@$1; carrots, 75c.@$1; pumpkins, per 100, $6@9; celery, per doz., 75c.@$1.

Exports potatoes for week, 2 851 bbls.

WOOL.—As the year draws to a close, diminished business is noted as usual, but holders look for more life with the turn of the year and are very confident as to prices.

Ohio, Pennsylvania and West Virginia—XXX, 55@58c.; XX, 51@55c.; X, 50@53c.; No. 1, 55@57c.; No. 2, 47@50c.; coarse, 43@46c.; combing, 53@57c.

New York, Michigan and Wisconsin—XX, 47@50c.; X, 47@50c.; No. 1, 52@ 55c.; No. 2, 46@50c.; coarse, 38@40c.; combing, 50@54c.

Indiana, Kentucky and Tennessee—XX and X, 46@50c.; No. 1, 52@55c.; No. 2, 46@50c.; coarse, 38@40c.; combing, 50@54c.; do. unwashed, 37@42c.

Illinois, Iowa and Minnesota—X and XX, 43@47c.; No. 1, 48@52c.; No. 2, 43@45c.; coarse, 37@40c.

Georgia, Alabama, Mississippi and Louisiana—Fine unwashed, 43@45c; medium unwashed, 40@43c.; coarse unwashed, 30@33c.; burry 18@24c.

LIVE STOCK MARKETS

NEW YORK, Saturday, Dec. 13.

BEEVES.—Receipts for the week, 9,740 head; do. last week, 9 541 do. The market closed strong although there was some resistance to the higher demands of sellers. Receipts, however, were in favor of the yards, and the bulk of cattle sold in the 9@10c. range. Common to fair steers ranged 7¼@8¾c.; to dress, 55@58 lbs.; good to prime, 9@10c.; do. 56 lbs; choice, 10¼c.; do. 57 lbs.; the latter price paid for export stock. Dry cows, 6¾c.

SHEEP AND LAMBS.—Receipts for the week, 25,368 head. The demand has improved with a smaller offering. Sheep sold at the close at 4@5¾c.; some reported at 6c Lambs, 5¾@6¾c. A few at nearly 6¾c.

HOGS.—Receipts for the week, 26 362 head. Light receipts and enlarged packing and retail wants have stiffened the market. State, live, per 100, $4,60@4.80; Western, $4.60@4.80; country pork, 5¾@7c. heavy and light; city dressed, 6@7¾. Pork tenderloins, 7c.

MILCH COWS.—The demand is not heavy and the high cost of keeping makes owners here ready sellers, even if concessions have to be made. We quote $35@55 per head, with $60 seldom quoted.

VEAL CALVES.—Prime live calves in good demand and firm. Dressed calves dull, but expected to do better when the soft weather subsides. Bucks Co., 6¾@7¾c.; State, prime, 7@7¾c; other, 5¾@6¾c.; Mount Hollys, 300 lbs to 400 lbs, 4¾@7¾c.; buttermilks, 4@5c.; grassers, 1¾@2¾c.

Send **$3.00-3.50-4.00-$5.00** and get a Holly Saw, which to every household is worth ten times its price. The engravings represent many beautiful articles it makes. Wood and Patterns enough with **$4 Saw** to make **$30 worth of work.** Glove Box, Handkerchief Box, Motto, Corner Bracket, and Witch of Endor Horse-Shoe Patterns just out; sell when sawed for **$6.**—material, **75c.**; profit, **$5.25.** Patterns so simple a boy 12 years old can saw them so handsomely they sell at sight. J. Gray, Lebanon, Kan., sawed Lord's Prayer in 3 days, and sold it for **$30**; material, **$1.25.** Many report getting same price. Hundreds sold for **$15** and **$20.** Boys make most money on comical articles, earning **$4** and **$5**, and even much more per day. *Motto Welcome* in engraving, 10 pieces are sawed at once in ¾ of a day—you can see the money in it at **$1 each.** Its utility and practicability is properly described by F. Hubbell, Saginaw, Mich.: "Dear Sir—Holly Saw came to-day. Have already made one bracket. Four of my playmates have seen it, and all are going to have one. What discount will you allow me, for I know I can sell quite a number in our little village. The machine is much better than I expected. Answer at once, as I wish to send the money for at least four more." **To Parents** who look to their own interests and the welfare of their children I give an extract from a letter of J. H. Gunnell, of Santiago, Ill.: "Dear Sir—Last fall I purchased a Holly Saw for my boy. Hesitated long before I sent the money, having bought so much for him, and all to no purpose. But allow me to express my gratitude for the good it has done in my family. My three boys now spend their evenings at home, have quite a factory, and are laying up money. Can heartily say that $3 was the greatest investment of my life, and gave me the greatest satisfaction. All additional tools they bought with money earned on the $3 Holly. Have just bought your New Demas Lathe and Saw, which is a marvelous piece of machinery for the money." In conclusion he says: "Could all parents know the great pleasure and benefit it has been to me, they would not be another day without one of your little Saws." I receive many similar letters daily

A Manual of Fret-Sawing and Turning accompanies each machine. No. 3 Machine is a special offer, and is the greatest bargain ever offered; and for **$1** extra will deliver either all set up ready to use. ☞ The last offer has never had its equal. Catalogue **free.** Address **A. H. SHIPMAN, Rochester, N. Y.**

Reading for the Young.

THREE LITTLE GIRLS.

ONCE upon a time, three little girls lived in a queer, little, old fashioned house, that had three little dormer windows looking out to the sunset. Three little, merry girls, full of song as a spring day, and fair as anemones, their long curls were the color of pale corn silk, and their three pairs of bright eyes were like June Violets. O, they were fair as the fairies! and they lived long ago. Often on cold winter nights, when the wind rattled the three little dormer windows, would the three little girls stand and look out, and away between the three slim poplars that kept watch at the garden gate, and they would shiver and wonder what all poor dead flowers were thinking about, and what all the leaves were dreaming of, or if they could think at all. Then they would dance back to the warm rooms, and bringing their three little, red velvet cushioned chairs close to the ancient fireplace, they would look into the glowing coals and tell all sorts of wild stories and dream all kinds of queer dreams; then, nestling closely together, they would sing and read. Oh, such songs as they would sing, and such stories as they would read—songs that made one think of the summer wind among the Daisies, or of Æolian harps at sunrise. Why, in the mid-winter night, it would fairly seem that the robins were singing and the Roses blooming; the room grew bright as with golden sunshine, and the air grew sweet as with the breath of Lilies, and still they read on, all the marvelous stories of fairies and brownies, all the wonderful stories of knights and ladies. They read about the musician who played upon the harp with such skill, that even the most turbulent rivers became motionless and ceased to flow, and all the wild beasts forgot their prey and stood spellbound to listen to the rare melody;—and all the mountains felt a strange thrill creeping down through every crevice about them. On and on they read, till their eyes grew dark with wonder and the peach bloom deepened on their cheeks. They read of the virgin who was much too pure for earth, and when the golden age ceased to be, she sought her place among the stars, where she ever waits, scales in hand, until the dawn of a second golden age. They wondered exceedingly how she ever performed the journey and found her place among the stars; but still they read on. They read about Hercules the Theban who slew the fearful hydra with its hundred hissing heads, and caught alive the stag with its great horns all made of fine gold, and how this giant killed the dragon that also had a hundred heads and as many voices, that he might gain access to the garden of Hesperides and bring away the golden apples. Oh! a whole book could not contain half the marvelous stories they read and told; and you could never sing half the strange songs they sang.

The fire burned low in the grate, the cricket ceased to sing, and the winds sped away and it was spring time, then the three little girls brushed their long curls, the color of pale corn silk, and robed themselves in white and you would have thought them fairies so fair were they, so blue were their eyes, and so red were their cheeks. So it happened long ago when the three pairs of little birds with red down on their dainty breasts and yellow plumes on their heads came back as they always did to build their three little nests in the poplars. The three little dormer windows became shaded with great blue Morning Glories, and the birds sang for very joy everywhere in all the sunny land. Then when the days grew long and breathless the three little girls each cried out, "O the fairies! the fairies. I go to find them;" so taking their three little hats that were made entirely of grass blades plaited together and fastened with blue Violets. Away they sped to the woods where the moss was moist and spongy beneath their feet, and clapped their hands with glee. The winds shouted "they come, they come," and all the forest was sweet, and vocal. Onward they sped but never a fairy crossed their path. They peeped into the robin's nest, they listened to the insects humming among the bushes, and watched the honey bees fly homeward with their sweets; they leaned their peach blossom cheeks upon the emerald grasses on the river bank, where the silvery fishes were flashing in and out among the pebbles; they heard the babbling of the little waves as they scrambled over the limestone ridge, and listened to them as they laughed among the round pebbles. At last they grew tired and sat very still and the flowers dropped from their fingers and their hands lay quiet in their laps.

The waves were touched with gold and went softly by, and the sun leaned low to the West, when the three little girls with eyes like pure Violets heard many little voices. Oh, the woods became filled with tiny voices, sweet as summer winds, and throngs of fairy folk clustered about them, and every tree and every flower became a fairy, and every bird and insect became a fairy, and the whole woods were made vocal with rare music, when the three little girls opened their blue, bewildered eyes, and the world was grand and glorious; the trees were all telling strange stories—tales of long ago, when gallant knights and beautiful ladies had lingered in their cool shadows. They heard the story of the twin children who had sought in field and wood for the fairies, and found them at last in every leaf and flower. The three little girls wondered much that they had never thought of that before; so they gathered a handful of the little heartsease at their feet, and every blossom was a tiny, winsome face. They pressed the flowers to their lips and rejoiced, for they had found the fairies. Then a few crystal drops fell from the fringed clouds and a rainbow spanned the heavens, touching the earth at the North and South, and all was light and glory, above and below. The three little girls went, hand in hand, homeward. They had learned that the woods and fields were full of fairy forms and voices; but we must search for them, for they are shy little things, and do not force themselves upon our sight. We must listen for their sweet tones—they are so like the sound of the winds and the songs of the birds, that only listening ears can detect the sweet, teaching voices. Nevertheless, these fairies are flitting about and singing now, as of old, teaching the pure doctrines that all should be glad to learn. The three little girls went homeward, their faces sweeter than ever before, and they sat in the queer little dormer windows, thinking of the day's adventure, until stars were in the sky.

MRS. CHARLOTTE E FISHER.

LETTERS FROM THE COUSINS.

Letter from one of the Aunties.

DEAR UNCLE MARK:—Seeing that you published my letter, I now, according to promise, send you some seeds of the China Tree. I do not propose to tell you what to do with them, but I would respectfully state to you, what I know of the tree, its peculiarities &c., &c. It is the hardiest of Southern trees, and next to the "Crape Myrtle" the handsomest. It is almost impossible to exterminate this "China tree" in the South as so many seeds fall (we call them "China balls") that you can scarcely tell where they may not appear. Main St., of Natchez, Miss., is bordered on each side with those trees and I suppose all the "little geographers" know that the city is built upon a bluff 300 feet above the level of the Mississippi River, so that upon coming to the top of the bluff and gazing up, it being an up grade, those trees look like a dream of fairy land, when in the spring they are in full bloom. Every fall, or in early spring, before the sap rises, the old trees are cut down close to the stock, so that they look like some ghostly giant of a dark night, and their shadows on moonlight nights, when I was a child, often caused me fear, they are such profuse growers, that if they were not yearly cut down close, they would be in the way and look unsightly. After the trees are through blooming, those seeds form; each ball contains from four to six seeds, they ought to be planted in fall, and they will come up in spring, ready for the growing season. Mine that I planted in our front-yard grew over four feet in one summer; they will not blossom till they are three years old.

In this Northern climate they will need a Southern location and protection in winter until they become thoroughly "Yankeeized," like I have been. I wish the children could have seen the Magnolia blossoms my sister sent me from New Orleans last fall and this spring; they are pure as any Lily in their petals, while they are as large round as a saucer; the corolla of the flower is a pure creamy white. In by-gone days, when, a happy child, I played 'neath the shade of those stately trees, with not a care to dim the brightness of my life, I thought then that the happy days were coming; but let me tell you, dear little ones, that childhood's days are the best in life. I never dreamed then of the "red hand" of war that was slowly and surely coming to overshadow all this brightness, and, like an eclipse, was to darken the fairest and brightest hopes of many a life ere peace should once more appear to dispel the darkness. But I must cease my rambling, or I shall be tumbled into the waste basket, but childhood's days always have a charm for me. I love to read the letters from the children; there is no subterfuge, no glossing over in their composition, and it is refreshing, in this world of "artificiality," to find something that is purely natural. My flower garden ran wild last summer, as I was not able to attend to it, while the Morning Glories stepped in and took possession; even the shade trees were garlanded, and in the morning it used to look lovely; Providence and health permitting, I will do better next summer, as I dearly love flowers. I intend getting some seeds from the RURAL, and then I shall "go into business" on the flower question. But adieu, aunts, cousins and all; my baby is clamoring for attention, and as it is bedtime, I shall say good night and God bless you to one and all till we meet again. Yours, &c.,

Marshall Co., Kas. MRS. M. J. GALPIN.

[Many thanks for the seeds, auntie; we will plant them in the experiment garden at the Rural Grounds.—U. M.]

UNCLE MARK:—I will tell you how I have prospered with my first garden. All the seeds I planted grew except the peanuts. The musk-melons were the nicest we ever ate. The water-melons large and good Acme tomatoes extra. I did not sell any of them, I think it better to supply the table with nice fruit than to have the money for my own use. Where the nuts did not grow I planted beans. I had 75 plants of tobacco which is ripe and ready for sale. I would not use it if I were a man. Do any of the cousins know that snakes grow? I was plowing one day and plowed up some eggs with a rough shell one and one-half inches long, thinking they were turtle eggs I took them into the house; but after a little while one of them cracked open and a little spotted snake, six inches long, crawled out. I have been back to the city and staid two weeks, but I like the country the best. I am going to school now. I shall try to have a better garden next year. There are large persimmons grown here and I want some in my garden.

GEORGE SHAW.

Washington Co., Ill.

DEAR UNCLE MARK:—I am almost 12 years old. I have a piano and have been taking music lessons all summer. I can play most exquisitely. We have not had any school in our district since the 1st of June, on account of building a new schoolhouse. The work is going up very slowly but it will be exquisitely grand when it is finished, I wish all the Rural Cousins could come and see it. We have had a splendid autumn but Jack Frost has come and caught all of our flowers except what we took in. We have a greenhouse and it is full of beautiful plants. We have an Agapanthus plant seven years old. It has never bloomed; can any one tell how to make it bloom? I do not wish you to think we raise nothing but flowers; we raised pumpkins that weighed fifty-three pounds; and squashes that weighed 41 pounds. I saw my other letter published, and if I see this published, too, I will write again. So good-bye, Uncle Mark. EVA.

Warren Co., O.

DEAR UNCLE MARK:—I saw my former letter printed, and then thought I would write again. We have taken the RURAL for many years. I always read the letters from the cousins first. Why don't the cousins write and speak of their gains and failures of the summer, (I have none to speak of.) Uncle Mark I wish you would tell me how to make Calla Lilies grow, whether to put the pots in pans of water or not.

I am 16, but I trust my age will not be an objection to my becoming a member of the Horticultural Club. This is only my second letter.

Yours truly, MAPLE LEAVES.

Crawfordsville, Ind.

[Calla Lilies should never be put in pans of water though they should be watered freely while in bloom.—U. M.]

DEAR UNCLE MARK:—I thank you for all those seeds you have sent me. The weather was so dry that many of them did not germinate. My radishes and tomatoes came up well and both were excellent; the corn came up but did not grow well; enough ripened, however, to try again. I had but few flowers this summer, but expect to have a large collection another year. I have one vine of the Jerusalem Apple, two yellow Crysanthemums, two monthly Roses, two scarlet Geraniums, one Sword Cactus, and one Othonna crassifolia—a basket plant. We received the grape seed and planted it according to directions.

Your niece, LETHA M. ABBOTT.

Clemont Co., Ohio.

DEAR UNCLE MARK:—I have been thinking of joining the club for a long time. I live in the country and read the letters from the cousins with interest every week; I am also very much interested in the culture of flowers. I have quite a variety of Geraniums. Will you please tell me why my Carnation don't bloom and what I shall do with it. Please put my sister and my name on the Horticultural Club list.

Yours respectfully, ALLIE.

Main St., Richmond, Va.

[I really do not know why your Carnation should refuse to bloom. Do you take good care of it?—U. M.]

The Puzzler.

HIDDEN SOUNDS.

☞ Answer in two weeks. LITTLE ONE.

ACROSTICAL ENIGMA.

My first, if you will see, is with each dear friend we meet.
My second came with me, we will find on Seventh street.
Our cousins' club looks sadly out without my third in the chair.
My fourth I saw but yesterday in a laughing maiden's hair.
My fifth was also mingled with the pretty ringlets free.
My sixth is often near my home, it ne'er deserted me.
The farmer needs my seventh with my eighth to fill his barn.
My whole came, all dear readers, and very soon we'll learn.

☞ Answer in two weeks. MARY WALEY.

RECENT LITERATURE.

The Mouth and Teeth. By J. W. WHITE, M.D., D. D. S.—Philadelphia, Lindsay and Blakiston, 50 cents.

THIS little book, the seventh of the American Health Primers, gives concisely the best and most useful information of the teeth, of any work we can cite. Dr. White, who is authority on the subject, has presented twenty chapters of excellent matter regarding the physiology and treatment of the teeth. The discussion of the mouth, anatomy, dentition, etc., are clearly illustrated, and are the preliminary essentials to a scientific knowledge of the teeth and the best methods for preserving them. His statements, which are accurate and logical, should be accepted by all. For young people the value of this work is inestimable, as it cautions against abuse and advises hygienic modes for treating disease. Caries, toothache, tartar, nervousness, food, the health as affected by the teeth and the teeth by disorders, are especially mentioned as attending topics. All should possess this useful book.

Pilgrim's Progress. By JOHN BUNYAN. With a Memoir of Bunyan, and Macaulay's Essay on the Pilgrim's Progress. Freely illustrated. Boston: Houghton, Osgood & Co.

THE publishers present this old-time favorite in a new, appropriate and tasteful dress. The clear, large type, the many explanatory notes and the illustrations make the reading of it pleasant and instructive. A colored plate of Christian at the Gate adorns the first page.

CHAS. SCRIBNERS' SONS' LIFE AND WORK OF GILBERT STUART was from the first received with an exceptional interest, which the book, both in its literary and artistic sides, fully justifies. As a biography, it deals not only with the painter, but with Stuart's brilliant social life as the intimate of half the celebrities of his time; and the personal reminiscences of his daughter, Miss Jane Stuart, at whose request and whose aid Mr. Mason has written, add special value to these anecdotes of her father's friends. As an art publication, the publishers believe that the volume stands alone in faithful reproduction of a painter's works. Messrs. Goupil & Co. have prepared the majority of the plates in Paris by their photogravure process, and have produced the most careful and beautiful specimens of this work yet used for book illustrations—to which they are here applied for the first time in this country. The richness of Stuart's coloring is conveyed with a truth which has hitherto been impossible in any form of print. Beside these plates there is an admirable engraving in pure line by Burt, of the "Gibbs Washington," considered by connoisseurs the best of Stuart's Washingtons, and now for the first time engraved; an etched fac-simile, by Duthie, of Stuart's pen-and-ink portait of himself; and an engraving by Cole of Miss Goodridge's miniature of the artist.

MR. HERBERT H. SMITHS' BRAZIL, published by the same house, is by no means an ordinary book of travel, though it has all the qualities which make the literature of travels attractive. Mr. Smith has studied the Amazons and the Brazilian coast with a thoroughness that makes his volume an authority perhaps without a rival in its special field; but he has made his description so vivid, and so communicates his own enthusiasm to the to the reader, that the information he gives is mastered unconsciously, and is never dull. He looks at the scenery of the great river with so strong an appreciation of its beauty, and conveys so well the impressions made by the great Amazons forest, that only occasional passages remind us he also studied the region with the skill of a trained naturalist. In the same way, the life of the people, both in the country and the towns, is so well described from the traveler's and resident's points of view, that only Mr. Smith's excellent chapters on Rio de Janeiro and his account of the Brazilian myths recall the amount of political and scientific knowledge of which the reader has also had the benefit. Mr. Champney's illustrations complete the value of the book.

MAGAZINES FOR DECEMBER.

LIPPINCOTT'S MAGAZINE for December has a varied list of contents, the most noticeable feature being the number of articles descriptive of life and manners at home and abroad. "Among the Biscayans," by George L. Catlin, our consul at La Rochelle, gives a graphic account, with illustrations, of the old Spanish seaport of Bilboa. "In the Backwoods of Carolina," by Louise Coffin Jones, presents a contrasted picture of the primitive and amusing aspects of American life in a mountain region remote from railways and the usual lines of travel. Wirt Sikes describes the "English Coffee Palaces" recently established by the Duke of Westminster, Lord Shaftesbury, Mr. Gladstone and others, to attract the working classes from the "gin palaces" and ordinary public houses. "The City of the Simple," by Helen Campbell, deals with a subject of constantly increasing interest and importance, the proper treatment of the insane, and contrasts the common method pursued in the best asylums both of Europe and America with the system instituted at Gheel, in Belgium, which is a colony of lunatics subject to no confinement or restraint. Another paper deserving of careful consideration is a description of the "Advantages and Disadvantages of a Foreign Education for Young Republicans," by a writer who compares the teaching in our public and private schools with German methods of instruction, as well as to indirect influences of social habits and surroundings on undeveloped minds. Dr. Charles W. Dulles has a short practical paper on "Poisoning, and How to treat it." L. Lejeune criticises the "Impressionist School of Painting," and M. Mather contributes an entertaining historical sketch entitled "Monsieur le Charmant." "Annee," by G. H. Pierce, which is concluded in this number, is a simply told but deeply pathetic story. The "Monthly Gossip" and literary notices are as bright and readable as usual.

The new volume begins with the next number, and in it will be commenced a new serial story, "Adam and Eve," by the author of "Dorothy Fox."

BRIEFLETS.

MR. J. G. EDWARDS, of England, remarks "Any man who has seen a turnip deems himself qualified to advise the farmer, and though each man sings to a different tune, the burden of the song is the same—that the farmer is in the fault and needs setting right." . . A very good colored plate of Virburnum plicatum—one of the best hardy shrubs in cultivation—appears in the current number of the Gardener's Monthly. We have talked *and* talked about this plant until we hope every reader that cares for shrubs at all, has one in his garden. . . What is the reason that all the journals are so much better now than during the rest of the year? . . The Maine Farmer says that the Portland Beet-sugar manufactory will be fortunate if it gets a new dollar for an old one as the result of this year's operations. . . The New England Farmer says that there has been a charm connected with the word "imported," when applied to cattle, as well as to dry-goods and wines; but since it has been discovered that as fine cloths, carpets and machinery can be made at home as can be produced in any other part of the world, some of us are bold enough to believe that even among domestic animals there may be real merit in our native breeds. . . Some go further, and claim that, taking everything into account, we can do better to select from and improve our own animals, than to look further for improvement by importing. . . Hit the nail on the head—not on the thumb. . . A rolling pin gathers no dough. . . Corn in the ear is worth two in the foot. . . It's a sensible cow that knoweth her own "fodder." . . . . . Mr. Wallace says: "To prevent horses overreaching, *shorten* the toes of the front shoes and *lengthen* the toes of the hind shoes. . . When people are ill-fed, they naturally become discontented. . . A good house and a good half-acre garden or cow pasture have lifted many a farm-laborer above the level of pauperism, while others have been steeped to the chin in poverty in the first week of any reverse occurring to them from illness or loss of work.—London Gazette. . . The expert who does not regard every other expert as an unmitigated ass is no expert at all.—N. Y. Advertiser. . . The green grass, which is the charm of all gardens, soon departs when large trees are about.—Meehan. . . Mr. D. B. Weir acknowledges that he issued his pamphlet of "Copyrighted" Cherries before a certificate of registry was received, which, as he says, "was not strictly legal." This is in answer to Mr. Eugene Glenu's strictures in the Gardener's Monthly. . . The Jingko (Salisburia) is capable of being trained to a wall as readily as a vine, and it is in this way very beautiful and curious—says Mr. Meehan. It may be curved in circles, or trained to any form. . . Gen. Le Duc has made the Reports of the Patent Office and Agricultural Department thrice as valuable by his General Index. Everybody appreciates the value of a good index. The reason why indexes of comprehensive works are so slighted, is because it is really an arduous, tedious task to compile them. . . The cross-breeding of fish is talked of as if it were more remarkable than any other sort of cross-breeding. . . It is time that there should be a boom in the wood-pile. . . Mrs. Grubs (to her sick husband): "I wish you to bear in mind, Joseph, that when I die I shall request to be placed by your side." Mr. Grubs (with a sigh): "Darn it! No rest for me, even in the grave."—Punch. . . . Roots of rhubarb may be lifted, if the soil is not frozen, and forced into growth in any warm room. . . . Will the cat ever legislate well for the mouse? . . . To assure the English farmer good crops when he has neither summer nor sun to work with, is the bottom problem which the present agricultural depression presents. . . . Some one has said that tables of figures are like cobwebs—beautifully reticulated, but holding no conclusions. . . . "Waldo" (Ohio Farmer) thinks that the phrase "Possibilities of an Acre" is the invention of Conrad Wilson. It does sound like him. . . . Corn is King in Southern Michigan, says Mr. Lewis; and unless farmers keep swine that will grow and fatten on pasture and harden up for market by being fed some grain, there is no money in making pork for the Southern Michigan farmer. . . . A Southern fancier informs the Poultry Bulletin that if the game of "hide 'n coop" were not so popular among the darkies in his neighborhood, the profits of poultry-raising would be greater. . . .

An Old Hen's Epitaph.

BY A MARKETMAN.

Ten years since, alive and kickin',
I came forth a young spring chicken;
And though so old when I did die,
Soon a spring chicken *again* was I.

PERSONAL ITEMS.

Chief Justice Fisher, of Washington Territory, has resigned.

Pinchback, of Louisiana, has come out in favor of a general exodus of his race to Kansas. Before the late election he was persistently opposed to the movement; but he says that recent bulldozing has opened his eyes to the necessity of it.

One hundred millionaires are now residents of San Francisco. Mackay, who is thought to be their chief, being worth about twenty millions, is content to pass most of his time in a temperature of one hundred degrees, down in his mines.

The notorious Eliza Pinkerton, the mulatto who rivaled Mrs. Jenks as a Louisiana witness, has been acquitted of the charge of poisoning her husband, medical analysis failing to discover anything out of the way in the dead man's stomach.

A London paper, in recording the death of John Grant, for twenty-five years head gamekeeper as Balmoral, says that the Queen frequently visited him prior to his death, and delayed her departure from Balmoral four days to pay him a last tribute of friendship.

According to West End, London, gossip, the libels in Town Talk on Mrs. Langtry and Mrs. Cornwallis West, for which Mr. Rosenbergh is undergoing imprisonment, are the work of a rival beauty, who found herself eclipsed by their superior charms. Her father's name appears in the baronet's list, and money and influence were successfully interposed to prevent exposure.

Sir Henry Havelock has been left a large fortune, but there is an awkward condition attached to it. He is to take the name of Allan in the future in return for the sudden wealth thrust upon him. Tennyson declined some thousands a year recently, which he was offered on change of his name, and it is hard on a man with such an honored name as Havelock to be obliged to part with it.

The long-pending "disruption" between the Jesuit order in England and Cardinal Manning is to be inquired into by his Holiness the Pope before the close of the present month. Father Porter, the head of the Jesuit College at Roehampton, England, has been at Rome for some time preparing for the conflict, and the head of the order is on his way. Cardinal Manning has also arrived in Rome.

Gen. Grant has resumed his public progress of the American cities. Last week he was at Chicago, where all the clergymen of the city called and paid their respects. Indianapolis next gave him an ovation, Louisville, Ky., followed with a brilliant reception, Wednesday, and Cincinnati rivaled Louisville in attention to the General on the following day. Columbus, O., then honored itself by honoring him, and next, smoky Pittsburgh is bright in his reception.

The Lord Chief Baron of the British Exchequer, Sir Fitzroy Kelly, recently attained his 83d year. He is a remarkable man, can walk 12 miles a day and sit any number of hours on the bench. Some 40 years ago he was ostracised for having committed some corrupt act at an election at Ipswich and committing perjury to palliate it; but he outlived the imputations through his great ability. Like the Lord Chancellor, Lord St. Leonards, he married his cook.

All Monthly prostration and suffering by ladies is avoided by using Hop Bitters a few days in advance.

A Gentle Stimulus

Is imparted to the kidneys and bladder by Hostetter's Bitters which is most useful in overcoming torpidity of those organs. Besides infusing more activity into them, this excellent tonic endows them with additional vigor and enables them the better to undergo the wear and tear of the discharging function imposed upon them by nature. Moreover, as they are the channel for the escape of certain impurities of the blood, it increases their usefulness by strengthening and healthfully stimulating them. In certain morbid conditions of these important organs, they fall into a sluggish state, which is the usual precursor of disease. What then can be of greater service than a medicine which impels them to greater activity when slothful? No maladies are more perilous than those which effect the kidneys; and a medicine which averts the peril should be highly esteemed.

Cheapest Weekly Newspaper IN THE U.S.

THE CHICAGO WEEKLY NEWS, now in its seventeenth year of publication, is a general family newspaper, unsurpassed in all the requirements of American journalism. First and foremost, it is a *news*paper in the completest sense of the name. Its telegraphic service is unsurpassed by any other publication in the country. Having the advantage of connection with the CHICAGO DAILY NEWS, it publishes *all* the dispatches of both the WESTERN ASSOCIATED PRESS and the NATIONAL ASSOCIATED PRESS, besides a very extensive service of special dispatches from all important points. It is INDEPENDENT IN POLITICS. It presents all political news free from partisan bias or coloring, and absolutely without fear or favor as to parties. The events of the coming year in the world of politics are of such peculiar, and even personal, interest to every American citizen, as to render it of paramount importance that fair and unvarnished statements of every political event or question should be at the command of all who desire to know the truth, rather than the distorted versions of interested party organs. It seeks to furnish the reader *facts*, the possession of which shall qualify him to form his own opinions. It is a FAMILY paper. Each issue contains SIX COMPLETED STORIES, an altogether novel feature in a NEWSpaper proper, and these have won for it, wherever it is known, an enviable popularity in the home circle. Besides this, each number contains a rich variety of condensed notes on art, literature, science, industries, fashions, etc., which are of common interest in the household. The paper is pure in tone, and nothing objectionable is ever permitted to appear in its columns, a characteristic of the very first importance in a journal that assumes to meet the requirements of a family paper. Its MARKET REPORTS are complete and trustworthy. THE CHICAGO WEEKLY NEWS is the CHEAPEST newspaper in the United States. SEVENTY-FIVE CENTS A YEAR—postage included. A dollar bill pays for sixteen months. It is, in the truest sense, A PEOPLE'S PAPER in character and price. Address

Field Crops.

NOTES FROM THE RURAL EXPERIMENT GROUNDS.

Experiments with Doura.—White and Brown Egyptian and China Corn.—The best Fodder Plant.

ABOUT the first of June we procured and planted several sorts of sorghum seeds marked (1st) Doura, (2nd) White Egyptian Corn, (3rd) Brown Egyptian Corn, (4th) China Corn. Of the first one twentieth of an acre was planted; of the others, single rows fifty feet in length, all two feet apart in the rows—the rows three feet apart. Unlike Pearl Millet, the seed germinated freely and grew freely throughout the entire season, all ripening fruit fully except the first (Doura), for which our season is not quite long enough. All except Doura sent up a single stalk as thick as that of good-sized corn-stalks. In these remarks we desire mainly to confine ourselves to such results of our experiments as have either not been published before, so far as we know, or that differ from those which have been published. Leaving Doura for a moment, it appears to us that neither for grain nor for fodder is any of the others worth cultivation in this climate. For fodder, corn will produce twice as much. For grain, whatever they may do in India, China, Syria or, in this country, in some of our Southern States and in California, they will not yield enough in this climate to make their cultivation profitable, especially when their inferior quality as compared with other grains, is taken into the account. The size of the grain varies as much as that of corn, the largest being smaller than small pop-corn. It is white in the White Egyptian—dull-brown in the Brown Egyptian and white in the China Corn. It has been stated that the last bears its fruit in *erect* heads. Either this is incorrect or our variety was not China Corn, since the heads of this as of the others (except Doura) were recurved. It has also been stated that China Corn, and if we mistake not, Brown and White Egyptian as well, would continue to grow after being cut. July 17 when about three feet high, we cut the stalks six inches above the ground. Except to throw out a feeble shoot or so, not one plant made any subsequent growth. All but Doura bloomed about Aug. 20 and while afterwards in the milk state and later, they were frequented by hundred of sparrows which robbed the heads of a greater part of their grain.

To return to Doura:—This, as we believe from the test of a single season, will prove of great value as a fodder plant. It is true we cannot say positively that it *is* Doura. The variety-names are so confused that we can speak of this only as the variety sent to us and cultivated under that name. It has been published that Doura sends up a single stalk. Ours averaged at least *eight* to a single seed under very ordinary cultivation. The stalks are slender as compared with the other kinds we have mentioned. The leaves are broad and long. The average hight of the stalks, Sep. 20, was nine feet. July 10 one row which was then five feet high, was cut five inches above ground. Each stalk continued to grow and the average hight was six feet on Oct. 1st when all was cut. Cattle and horses relish this even better than corn and eat the stalks entire, which are perceptibly sweeter than those of corn. While corn was prostrated by high winds which occurred twice during the growing season, every stalk of this remained as upright as ever. The seeds are smaller and more elliptical in shape than those of the others Our engraving of a panicle and a section of a leaf are those of this variety drawn just before the first frost. All of the above varieties belong to the common sorghum family—Sorghum vulgare.

That under the same genus and species varieties presenting such marked differences should occur may at first seem remarkable. But it must be remembered, as Dr. Thurber remarked in answer to a letter of inquiry by the writer of this, that this plant has been in cultivation for untold ages in Africa and Southern Asia. In all these centuries it has broken into apparently as many varieties as Indian Corn. Just as in corn, these sorts may be grouped by some striking peculiarity. We have Dent, Flint, Sweet and Pop-corn groups, each with many varieties, and so it is with sorghum. We have Broom-corn, Sugar-sorghums or Doura or "Millet," each, especially the latter, comprising many varieties. In corn we have the widest dissimilarities in size, color, etc., yet the plant does not cease to be corn or, botanically, Zea Mays. In like manner, the increasing number of varieties of sorghums is due alone to culture. According to some authorities, those sorghums that have drooping panicles are called botanically S. cernuum. There is no specific difference and the drooping head should no more make it so than the downward growth of the Weeping Beech or Spruce should entitle them to distinct specific names. Besides, this drooping habit is not invariable. A very slight support we found would cause an upright growth. That, moreover, the weight of the head has something to do with the drooping propensity, we found by thinning out a few of the panicles which afterward curved less. This might have been due, perhaps, to a consequent partial cessation of growth, for in one case we cut off the entire young head just as the stem began to curve and, as might have been expected, the stem died down to the node or joint beneath.

We freely recommend to our readers that they purchase, or procure, a small quantity of the seeds of Doura and test its value as a fodder plant. We have tried it in both sandy and clayey soils, at the Rural Grounds and at the Rural Farm with the results stated above or rather, to emphasize it still more, with the result that we like it better than any other fodder plant we have ever tried. No doubt it will be offered for sale by some of our seedsmen. We commend its sale especially to those who sold immense quantities of Pearl Millet last season at an immensely high price, causing, though unwittingly, immense disappointment in a large majority of instances.

PANICLE AND SECTION OF LEAF OF DOURA.—(Drawn from Liffe.)

Farm Topics.

BONE MANURES.

PROFESSOR G. C. CALDWELL.

MOST of the recent analyses of bone meal made at the Experiment Stations in this country show that no other commercial fertilizer, except, perhaps, Peruvian guano, offers so favorable a relation between estimated trade value and market price. The trade valuation is based on the proportion of nitrogen and phosphoric acid in the fertilizer. and the average cost of these substances in fertilizers generally, in equally soluble and assimilable forms, and also on the degree of fineness of the bone-meal; the finer it is, the more rapidly its constituents will become available in the soil, and the quicker will be the return for the capital invested in the manure.

The following table exhibits some of the general average results that have been obtained in these analyses.

	Number of samples analyzed.	Per cent of nitrogen.	Per cent of phosphoric acid.	Estimated value.	Cost in market.
Middletown (Ct.), experiment station, 1877-8.....	7	3.28	24.2		
Conn. Exp. Station, 1877.	7	3.09	22.26	38.08	31.89
Conn. Exp. Station, 1878.	26	2.68	18.13	33.10	31.58
Conn. Exp. Station, 1879.	9	3.62	20.26	38.56	31.90
Georgia, 1877-8.....	4	3.26	15.92		
North Carolina, 1877.....	2	2.31	10.62		

The average quality of this fertilizer, as is shown in the above table, varies considerably in different years as well as in different localities. It does not appear to be a favorite manure at the South, which, considering the comparatively poor quality of the article as offered there, is quite natural. The average result of the analyses made at the Connecticut Experiment Station in 1878, is reduced by the comparatively large number of poor samples received at the Station that year. Up to the date of this writing, December 10, the average results obtained this year indicate a marked general improvement in quality.

It may be that the dealers in such poor stuff do not find it profitable to allow their goods to fall under the observation of the Experiment Station; they can find markets close by in the neighboring State of New York where, although there is a law for the prevention of frauds in fertilizers, no such means are wisely provided by the State for exposing fraud. Farmers themselves cannot in most cases afford to take the necessary steps to enforce the law, and in other cases they will give themselves no concern about the matter under any circumstances.

I wish to call special attention to the figures in the last two columns. Even in that year when the bone manures were poorest in quality, the trade values were greater than the cost, and in the year preceding and that following, the difference was much greater in favor of these manures. It must not be supposed, however, that all bone manures put on the market are thus worth more than they cost, although up to this time only one has been analysed this year at the Connecticut Station, that was not. That one, I observe, was one of the very few brands offered for sale at the South. Last year, out of the 26 samples analysed at the same station, 10 cost more than their estimated trade value, and of this number three were different brands, manufactured by the same firm; this firm has been engaged in the business for a long time, and is widely known. On the other hand, I notice another brand, bearing the name of one of New York's most honored citizens, whose estimated value has always been greater than its cost, and sometimes one-third greater; if, as is undoubtedly the case, this firm makes a fair profit in selling an article of superior quality for $30 a ton, which is worth $40, then the other firm which sells, at the same price, an article whose trade value is only $27.56, and another for $35 which is worth but $29, must make exorbitant, or at least unreasonable profits. The farmers, of course, pay these excessive profits, and they will continue to be fleeced after this fashion as long as they will buy commercial manures without any guarantee as to their composition, or even with a guarantee, if they do not make some provision for having the statements of the dealers tested and verified, from time to time, by expert and disinterested chemists. If dealers know that, as in the State of New York as well as many other States, their statements of the composition of their manures will in all probability not be tested, it is not to be expected of average human nature, in the face of so much competition as there is in the fertilizer trade, that such statements will be as carefully made as when they are intended for localities where a rigid scrutiny is exercised. I might, if space permitted, present many illustrations of the position that these guarantees need verification.

The average cost per ton of superphosphate offered for sale last year and this in Connecticut, has been very nearly $38: bone-meal is therefore somewhat cheaper. Superphosphates contain generally a little less nitrogen than bone-meals and much less phosphoric acid, the average proportion being not over 12 per cent., of which about half is soluble in water, while none of the acid in bone-meal is directly soluble. The nitrogenous substance of the bone-meal, which is most intimately associated with the phosphate of lime, soon putrefies in the soil, and is supposed to assist very materially in bringing the phosphate into solution; hence all the phosphate in bone-meal may be regarded as existing there in a condition of medium solubility. On the other hand, it is a very generally accepted principle that the soluble acid of the superphosphate does not long remain in that condition in the soil, but is sooner or later converted into a less soluble form, similar to that in the bone-meal, but with this advantage, however, that it is more uniformly distributed over the surfaces of the particles of the soil.

Putting all these considerations together, we need not be surprised at the claims sometimes made to the effect that better results have been obtained with bone-meal than with superphosphate. Such a result would be more likely to occur with superphosphates made from mineral phosphate instead of bone-meal, since the insoluble portion of such phosphate is usually quite insoluble and unassimilable so far as its immediate usefulness is concerned.

Cornell University, Ithaca, N. Y.

ENSILAGE.

The opening of the silo at "Winning Farm," Bellerica, Mass., Dec. 3, was attended by a number of agriculturists and members of the press. This is the first American silo built exactly on the French plan, as discovered and invented by M. Auguste Goffart, after many years' experimenting. The silo is double, each side, 40 ft. long, 12 ft. wide, 16 ft. deep, the whole being roofed, containing altogether about 500 tons when filled. One side was about half full, containing about 125 tons of cornstalks; the walls were concrete, 15 in. thick, and cemented smoothly on the inside. It was sealed with a small door on Sept. 30, after eight days employed in the cutting with 5½ horse-power engine and large ensilage cutter placed near the silo, cutting the stalks 4-10 inch, and elevating the fodder over the wall into it, where two men spread and trampled it. Straw, about 12 in. thick, was spread over it; a layer of 1½in. spruce planks covered the whole crosswise, on which were placed about 50 tons of stone.

The stalks, however, were cut when too mature, some of them having roasting ears, and some being dried and frost-bitten. This delay was owing to the silo not being finished in time. Notwithstanding this, the ensilage was found to be in excellent preservation, with a very thin crust (2 in.) of adhesive steamed fodder, which readily separated from the bright, pale mass of fodder. The fodder was at first sour to the taste, the result of the delay in cutting; but on exposure to the air for a few hours, it became sweet with natural color, and taste slightly alcoholic, and all the cattle, sheep and hogs eat it greedily.

The cost of the double side was about $500, and the cost of the corn-fodder does not exceed 75 cents per ton. The proprietor, Mr. J. M. Bailey, is greatly pleased with the results, and will ensilage a much larger quantity the coming season. Mr. Morris, of Maryland, is also preparing to raise 1,000 tons for ensilage.

J. B. BROWN.

Farm Economy.

CONSTRUCTION OF SNOW-PLOW.

We here present a snow-plow which, in its construction, is superior to any other implement of the kind that we have seen, and it

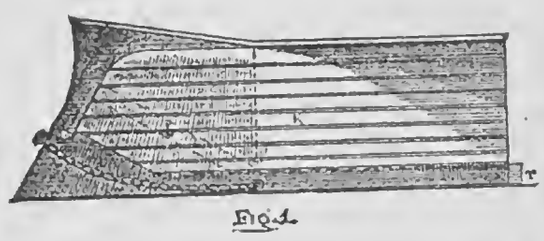

Fig. 1.

can be made by anybody accustomed to the use of tools. Fig. 1 shows a side view of the plow when complete, and fig. 2 a ground-plan of the same. One-half of the bottom is left unboarded to show the construction of the frame, and in the other half is seen the side

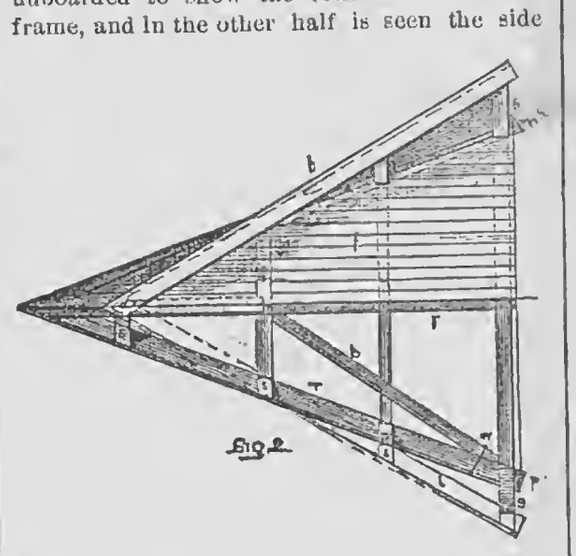

Fig. 2.

and the boarded floor. Fig. 3 represents a rear view, and fig. 4, a front view of the plow. Its construction is explained by the letters as follows: r, r, r, are the runners, of which there are three, one being in the middle; in a small plow this middle runner can be

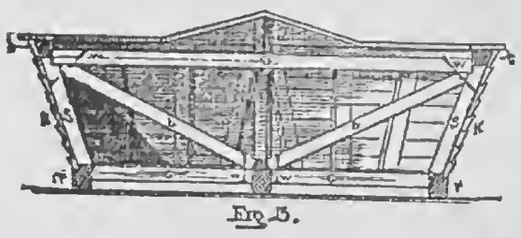

Fig. 3.

omitted; t t are the top rails, b b, the braces and k k, clapboards. These overlap one another upwards to hold the plow the more steadily in the snow; if they overlapped downwards, there would be a tendency to lift the plow out of the snow. The flooring is shown at f; w, w are iron bolts; c, c, floor beams; a, beams to resist pressure from the sides; i, a sheet-iron covering fastened on the front and

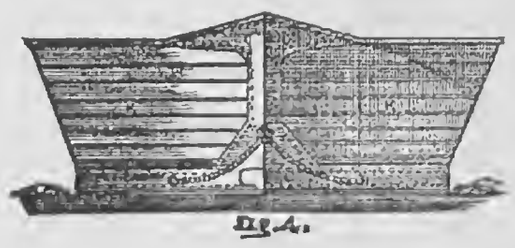

Fig. 4.

base of the sides to prevent the snow from entering the joints and also to give the front a smooth surface. The runners should be made of oak, and in addition they may be shod with iron; the rest of the timber can be pine or spruce. This plow can be made of any desirable size, and if only a small light plow is wanted, the details of construction need not be carried out as fully as here indicated, but if the directions are followed the result will be a strong, light-running and efficient implement capable of withstanding severe work.

A Good Deodorizer.

In our vicinity are numerous kilns where large quantities of wood are burned into charcoal for use in the iron furnaces located at Appleton. The screenings, or fine coal, are thrown out as useless. I haul a load of the stuff now and then for use as a deodorizer, using it freely in the stables, the privy vault, the pig-pen, the hennery; in fact, in every place from which foul odors arise. I find that it answers that purpose better than any other substance which I can use, not only adding to the health and comfort of my family, but to the well-being of the pigs and chickens as well. I cannot say how much real value there is in charcoal as a manure. (This was explained in "Querist" of a late issue. EDS); but believe that when it is mixed thoroughly with other manure, as in this case, it adds materially to its value. I have occasionally applied the fresh coal directly to the soil, but cannot speak very favorably of the results. Where it can be had for the hauling any reasonable distance, however, I would advise its free use as above. J. K.

Industrial Societies.

INTERNATIONAL DAIRY FAIR.

(Continued from last week.)

Dairy Implements and Cattle Exhibits.

Lincoln's Patent Creamery comes next. This is exceedingly simple in construction. The ice chamber, one-third, as usual, of the box, has a conical bottom and turns back from the cans on a hinge, and is held in place by two leather straps. The cans have no covers and no fancy fixings for removing the cream or skimmed milk. This must be done with a dipper.

In butter coloring materials there are numerous displays. Wells, Richardson & Co., so well and favorably known in this connection, make, as usual, a very fine display, pointing out the necessity for supplying the uniform color to butter that the cows do not always succeed in producing. There are also fine displays by Mrs. B. Smith, who claims many new and valuable improvements in the goods she now produces. There are also fine foreign exhibits in this line, notably Mr. Chr. Hansen's Liquid Butter Coloring: also L. Ziffer's Liquid Annatto Also Badger State, and Natural Butter Colors from Wisconsin. Then there are minor exhibits under the patronage of larger displays.

One of the most interesting and striking displays of the exhibition is made by the Dairy Supply Company. Festoons of their popular and unique milking-pail grace the front of their three alcoves, while the Pendulum churn attracts its usual crowd of investigators. They have many novelties in the way of wooden butter packages called "knock down" boxes, that are shipped to the dairyman in solid packages to be set up when used, and made after the pattern of Crandell's jointed toys.

Cornish & Curtis display novel plans of box and rectangular churns, that are so popular in the West. This compact, durable and efficient churn, we are told, bore away the highest award—a cash premium and a diploma—at the great Chicago Dairy Fair last December.

The Blanchard Sons, not satisfied with the famous reputation of their churn, are still urging it upon the notice of dairymen with new improvements. One late improvement consists in substituting a circular top to it in place of the flat top that it formerly had. This circular top does not hold an accumulation of cream while the churn is in motion, thus doing away with the old necessity for "scraping down" that the flat top imposed upon the churner. This new feature brings this popular churn very nearly to perfection—it is called the "New Blanchard." The Davis Swing Churn that carried off the first honors last year, is on hand again, and rigged, as it was thought impossible to do, with a power. The attraction is in the shape of a fine dog, that moves it with an ease and grace that speak volumes for the mechanical ingenuity that reduces the labor to a minimum.

The great attraction in the line of novelties this year consists of a home-made and an imported centrifugal Cream Separator. These are machines with hollow cylinders, in which are placed the full milk, fresh from the cow. These cylinders are revolved at the rate of about two thousand revolutions to the minute. The great speed causes the heavier parts of the milk to seek the circumference, while the lighter particles gather in the center. By ingenious contrivances the cream, which is lightest, is drawn from the center, while the rest of the milk is taken from the outer circle. Every one is wondering if these machines will not revolutionize butter making once more, as the cold setting has done in the last few years. A man who had a patent churn, with rights for sale, excited much interest and amusement among the spectators by a challenge trial between his device and others; the Surprise Churn, exhibited by Morsely & Stoddard, gave it such a close race that the other was, owing to one of those mishaps that always occur in a race where one party is a little faster than the other, left slightly in the rear, much to the gratification of these enterprising manufacturers of dairy implements.

Mr. Jas. B. Gilberds shows a new model of the Jamestown return butter pail with a patent fastening that does away with the old objectionable "ears" that were always sticking up in the way, so that one tub could not be set upon another, and greatly hindering the very necessary process of "stripping." This contrivance, the "Optimus," as it is called, consists of a sliding lever, with galvanized flat hooks, that the ends of the lever cover, when in position. This takes the place of the old-fashioned wooden pins that passed through holes in the long staves or "ears."

One of the showiest, handsomest and most striking exhibits in the fair is Frank B. Ward's milk wagon. It is complete in its appointments with patent refrigerated cans in front, and sliding brackets to hold the cups. Instead of a bell, a melodious gong is rung with the foot of the driver. With great ingenuity every spare inch of the wagon is utilized, while its outside ornamentation is simply resplendent. Mr. Ward, we understand, is one of the most enterprising milk men of Washington, D. C., and has made a handsome fortune in the trade. It is to such men that we are always indebted for advanced ideas and improvements in dairy practice.

The Vermont Machine Company show a patent "Evaporator," contrived for perfectly taking the water out of anything. The farmer nearly every year is overrun with some one or more of the various kinds of fruits. What to do with the surplus that he sees rotting about him is a serious question. This machine solves the problem. It condenses into jelly, or syrup, or sugar, thus placing the fruit in a shape which can be preserved or shipped in the least bulk, and upon a paying basis. Warren's glass milk vessel for delivering milk fresh and genuine, a method that is likely to revolutionize milk-delivery in large cities, is exhibited by the Dairy Supply Company, and should be well studied by all who are interested in this branch of dairying.

A new thing on the market is here introduced—fresh cream from Iowa. The West will never get done surprising us, and at last we are able to eat fresh, sweet, rich cream a thousand miles from the cows that produced it. But let this enterprising gentleman tell his own tale. "Fresh, sweet cream! This cream is produced from healthy cows, fed upon the corn and nutritious grasses of Iowa, the banner dairy State of America." That it is good we know from actual test.

Among the large exhibitors the most prominent are Whitman & Burrell, with quite a grand display of dairy utensils, making cheese and creamery butter and doing things as usual on a grand scale. They exhibit cream-raising in vats for factory purposes, and on a large scale. Among their novelties this year they show a seamless cheese-cloth or bandage, that works much more smoothly and keeps off the fly better than the old kind. They also have a model stable filled with cows that slipped into the fair without being examined, and are now standing where Gen. Patrick said no cows should be. We hope the General and every lady visitor has looked into this matter, and examined it for themselves. In their refrigerated cheese-vat they have introduced the improvement of putting ice in the hollow partition, through the center. Their general display is very fine, and does credit to the enterprise of the firm.

Davis and Fairlamb show a full line of their cans for handling cream by the Fairlamb process, also a new Stock Food Strainer.

THE CATTLE EXHIBITS AT THE DAIRY FAIR

L. S. HARDIN.

It was early known that the managers of the International Dairy Fair, now being held in this city at the American Institute, intended to make extraordinary exertions to bring together at this fair one of the finest collections of dairy cattle that had ever been exhibited. To that end, liberal premiums were offered and the breeders of fine cattle from all parts of the country fully notified and requested to exhibit their cattle. Out of this clear sky, however, came the thunderbolt that well-nigh blasted all their hopes. In pursuance with the legal precautions taken to prevent the spread of pleuro-pneumonia, Gen. Patrick laid an embargo upon all cattle intended for the fair from many of the adjoining States and counties lying in the vicinity of this city. By judicious exertion, however, about one hundred head, representing all the leading dairy breeds, have been brought together.

As you enter the dairy building, to the right and left, in strong contrast, is presented the picturesque sight of Jerseys and Holsteins;—the one largely prominent and striking from the abrupt contrasts of black and white, the other small, unique, and of modest, faded colors. This is quarantine, the orders being that cattle from certain States shall not come within three hundred feet of each other. Here in the Jersey section may be seen the famous herd of John J. Holly, of New Jersey, containing such cows as "Favorite of the Elms," "Filbert" and "Josephine 2d," cows that have won the first honors at fairs until their names have become to Jersey breeders as familiar as household words. Standing by their side, and possessing rare lines of beauty, is the first-premium bull of New Jersey, as determined at the last State fair, "Much a do." He is certainly a bull of grand proportions. In the adjoining pens, Dr. Newell, of the same State, exhibits some charming specimens of young Jerseys. Across the entrance aisle, stand the large black-and-white Holsteins of Mr. Neilson, of New Jersey, apparently unconscious, in their ponderous strength, of the mighty weight of impossible names they are bearing, chewing the cud of perfect contentment amongst all the din of a large fair. In point of quality, this imported herd is said by those competent to judge to be up to the full measure of the Holstein standard.

Back in what is called "Machinery Hall"—the rear apartment of the building—are collected the remainder of the cattle. Here William Crozier, the veteran showman, as he may well be called, exhibits a large herd, some forty in number, of Jerseys, Guernseys and Ayrshires. In point of evenness—probably the highest of all points of quality—this is a most remarkable collection. Among the Jerseys there may be said to be not one that is below medium in quality. "Rival," the hero of a dozen fairs, stands at the head of the herd, and is only equaled in points of beauty by that rare specimen of the Jersey type, "Gold Cup," just in his prime, some eighteen months of age. The Guernseys can scarcely be said to be up to the standard of Mr. Crozier's rare judgment in selecting cattle. The Ayrshires are specimens of the first water.

The Messrs. S. M. & D. Wells, of Conn., show a herd of superb Ayrshires, not only models in shape and comeliness, but holding that best of all virtues in a dairy cow, a record of performance that will make the best of the larger breeds look sharply to their laurels. Close competition for first honors is naturally looked for between these last two herds. The Messrs. Harvey & Weed and Mr. W. H. Walmsley, all of Connecticut, show herds of Devons. In shape, size, and especially in color, there is so much uniformity, it would be beyond us to express a choice. As specimen representatives of the breed, they are pronounced first-class. Mr. Decker, of this city, exhibits a herd of native cattle. There is a lack of evenness about them as usual, though we suppose they possess individual merits as milkers.

On the whole, though this fair exhibit was cut more than half in two by the cattle inspection authorities, the numbers are respectable and the quality as good as we have seen at a cattle exhibition.

Pomological.

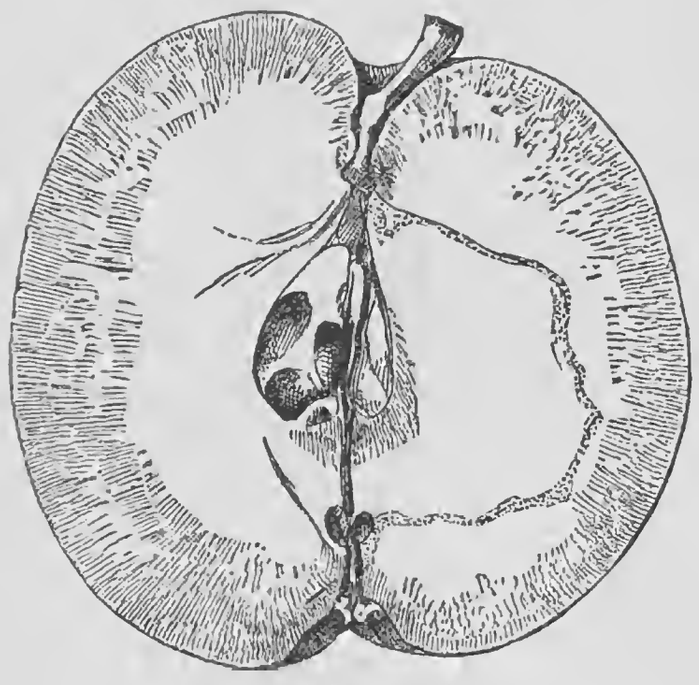
UNITING SPLIT BUDS AS GRAFTS.

A CORRESPONDENT of the RURAL NEW-YORKER in answer to an inquiry whether it "is possible to make buds split into halves and united as one, grow," says he "would as soon think of cutting two animals through the center to make one compound of them." When he cuts a potato into sets, or a twig from a Rhode Island Greening for a graft, does he then as "soon think of cutting up his animals" in the same way? I do not see why we should think of the animal when we are considering questions of grafting. How does he know that the "vital point in a seed or bud is a different thing" from the "mass of vessels and cells" which "adhere by advancing growth" in grafting? I would like to know more about this "vital point," for I find no reference to it in any of Dr. Gray's physiological works on my shelves.

I was gratified to learn that "it was quite possible to make two halved grafts adhere," and to know that in such cases "each half would remain distinct from the other;" but what would be interesting to know is how the new growth from these two halves behaves. "That a hybrid could be thus produced is contrary to all analogy and fact" leads me to inquire what facts are referred to? I have just been reading an interesting paper by F. W. Burbidge, a distinguished English horticulturist, who has taken the trouble to go over the whole recorded "facts," and select those which are undoubted, and I find that there are many things in existence positively known to have been raised by bud-grafting.

I should not have ventured to make these remarks only that you say the writer is "one of our first pomologists." As such, he is, of course, familiar with the subject he writes about, and, of course, he knows all about so distinguished a work on the subject as this of Mr. Burbidge. I beg to ask him, therefore, if when he says "bud hybrids" are contrary to "fact," he means to say that all the so-called facts collected by Mr. Burbidge are worthless? If pains-taking experiment, and careful investigation, such as Mr. Burbidge has taken, are of no more value than the mere "impossible" of a "first pomologist," it is hardly worth anybody's while to try experiments, much less to record the results.

ENGLISH SPARROW.



SECTION OF MOUNTAIN BEET APPLE.

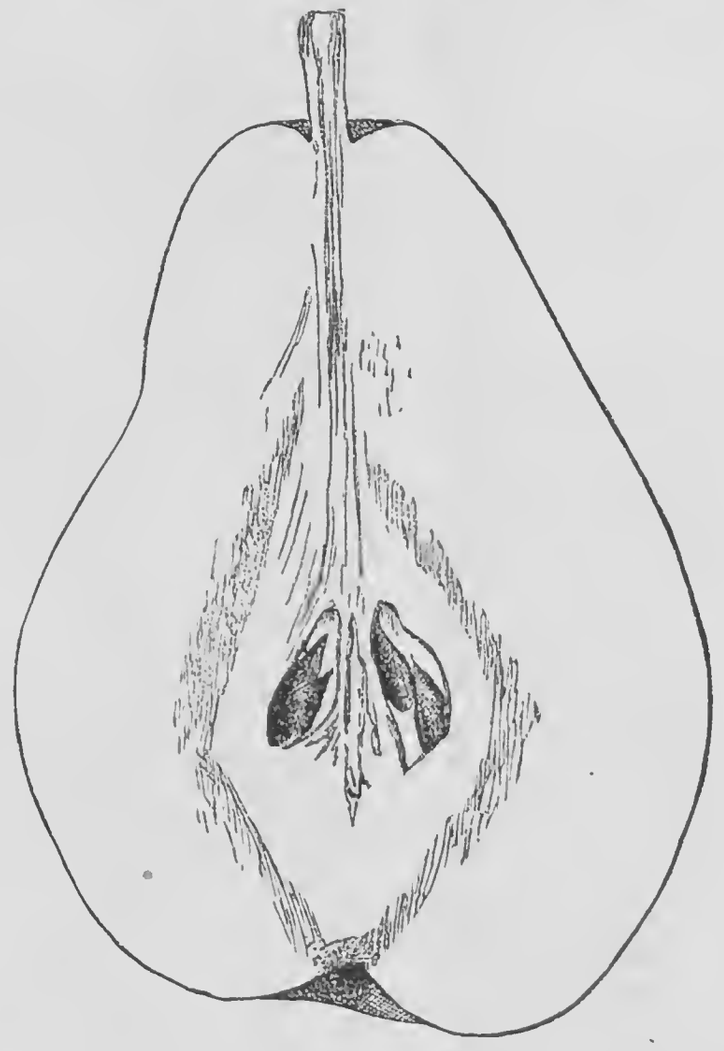
The Mountain Beet apple.

A BRIEF description, but without an illustration, was given of this apple in the RURAL a year ago. It is a dessert fruit of very good quality; tree vigorous and hardy in the severe climate of Lower Canada, and quite productive. It originated on Yamaska Mountain near Abbottsford, Quebec, and has been considerably propagated, the fruit proving salable and profitable in the city markets. It is a conical apple, of medium-size, and dark-red in color. The peculiarity of this variety is that when fully ripened on the tree, the flesh is nearly as red as the skin, like the blood-peach, or a blood-orange, with a red juice that stains the fingers like that of a strawberry. When well grown it is a very showy apple; but, like its probable parent, the Fameuse, it spots somewhat in unfavorable seasons or on unsuitable soil. Season, October and November.

Orleans Co., Vt. T. H. HOSKINS, M. D.

The Howell Pear.

We rarely hear this favorite market pear spoken of as doing well on Quince, but with us it seems as much improved in size as the Duchess is by the quince stock. Coming after the Bartlett and just before the Duchess, it meets with an immense sale in our markets. Its size is large, the engraving representing the average size; its color is yellow, often with a bronzy-red cheek and slight dots. The flesh is white, buttery, quite rich, aromatic and variable in quality in different places. It is a fair, showy fruit and is ranked as of good quality by pomologists. The tree is a strong grower and less liable to blight than many other sorts. The specimen from which our engraving is made, was picked from one of our own dwarf trees about the 1st of October. It is recommended for Texas, Georgia, Kansas, Louisiana, California, Utah, Tennessee, Illinois, Nebraska, Iowa, Ohio, Pennsylvania, New Jersey, Virginia, New Hampshire, Massachusetts, New York.



THE HOWELL PEAR—SECTION.

Pruning—Scraping the Bark.

AFTER watching closely the results of different methods of pruning for the last ten years, I have come to the conclusion that the majority of orchardists prune too seldom and too severely. Trees that are almost unpruned, being longer-lived and more fruitful than trees that are subjected to a severe pruning once a year or once in two years. We should bear in mind the fact that there should be a proper proportion between roots and branches. If we take off all the top, the roots all die; if we take off half the top, the roots are badly injured unless the tree can succeed in forcing latent buds into a plentiful crop of suckers. Again, scraping the bark off too closely is a mistake that is often made, all that is necessary is to take off the loose bark; if we scrape off *all* dead bark, we destroy nature's covering and leave the naked trunks to be scalded by the sun and injured by each and every frost.

T. F. FORFAR.

KEROSENE ON TREES.—I have never used kerosene on trees for the destruction of insects, etc.; but I have seen apple trees, of bearing size, ten to fourteen inches through near the ground, to which it had been applied to keep the canker-worm off. The trees made an attempt one or two seasons after to leaf out, but could not succeed in growing more than now and then a leaf a little larger than mouse ears and then ceased entirely to try, and became cumberers of the ground. I do not know how carefully the application was made, but as the trees were valuable I presume ordinary care was used. W. H. W.

Worcester Co., Mass.

THE KIEFFER'S HYBRID SEEDLING PEAR.—Mr. J. S. Collins, of Moorestown, N. J., in answer to our inquiry in Editorial Brevity in RURAL of November 22, as to whether the above Pear is really a "hybrid" or cross-breed, writes us that in his opinion it certainly is a hybrid, and that Mr. Thomas Meehan, Editor of the Gardener's Monthly, shares this opinion. But we do not find that anything *positive* is known about it.

Dairy Husbandry.

MAKING BUTTER IN THE WINTER—No. 1.

HENRY STEWART.

EVERY winter there is an outcry for fresh packed butter in small packages. In every country village there are families who are anxious to procure butter of first-rate quality in the winter season, when the summer dairies have finished their make, and when farmers can no longer supply them; and they are willing to pay an extra price for it. In winter, fresh butter is scarce, and in summer it is plentiful. It is the part of wisdom in one who makes anything to sell, to have it on the market when there is a scarcity, and when prices are high. It costs no more to make butter in the winter than in the summer. A dairyman who makes fine butter a specialty can just as easily keep his product even in quantity through the whole year as make it during the summer and be idle in the winter. It pays to work the year round and not stay idle one-half of it, and he who makes butter in the summer and keeps his cows idle in the winter throws away one-half of his opportunities. The old fashion of packing butter in June for sale in the fall for winter use, is obsolete. Western creameries and Eastern dairies have changed that practice of the farm, and farm butter has now no chance by the side of the fine goods that are put on the market by the creameries and winter dairymen. Winter dairying has been made possible by the inventive genius of the patent-churn people. Heretofore these useful persons spent their energies in discovering a possible churn that could differ from the 8,001 that had been already devised. Failing in finding an 8,002d one, they turned their attention to devising methods and machines for the setting of milk for cream, in which the temperature could be kept even by the use of ice in summer and warm water in the winter. The Swedish system of setting milk in deep pails soon became prevalent here, and a 10-cow dairy could be accommodated in a space which was formerly required for two cows. The inventive faculty of scores of ingenious men has been stimulated until there are numerous devices and kinds of apparatus for keeping milk in any desired temperature, and in such a way as to yield the best quality of butter, so that dairying can be carried on in winter as easily and cheaply as in summer.

But one must have the fresh cows, and this is easily accomplished. For winter dairying especially it is best to keep no cows through the summer, but to spend all the time in growing crops for winter feeding; and instead of selling the crops, to feed them to cows and turn them into butter. In this way the waste of pasturing is avoided and so is the waste of manure. Fresh cows can be purchased in the fall cheaper than in the spring and it has often happened that cows bought in the fall have been milked and fed through the winter and have been sold in the spring, for more than their cost; where there is pasture, this need not be done and the cows may be turned out to feed in the summer when dry, at very small expense.

Feeding for Winter Butter.

It has been said and insisted upon by some persons for whose opinion I have great respect, that the kind and quantity of feed given to a cow have no influence on the quantity and quality of the butter. But every day's experience convinces me that this opinion is without any good basis. I have proved the contrary again and again, and I *know* that the feed is of the utmost importance in making winter butter. I can choose such feed as will make a Jersey cow give white butter of no more flavor than lard, and such as will make butter that will need no color to make it acceptable in that regard to the most fastidious judge; and the same with regard to flavor. I have tried experiments on my customers and on my butter-maker, by changing the feed, and have been amused to hear the remarks as to the quality of the butter, and the yield of both milk and butter. Almost every farmer and farmer's boy knows that buckwheat bran fed to cows, will produce butter almost perfectly white in color and of a greasy, unpleasant flavor. Perhaps the worst possible fresh butter might be made from a cow fed upon corn stalks, turnips and buckwheat bran, for it would be poor in color without texture, and of a strong flavor. Linseed oil-cake meal gives a greasy unpleasant flavor and light color; palm-nut meal is but little better, although it is remarkable for its effect in increasing the quantity of cream in the milk; cotton-seed meal is certainly the best of all the artificial foods, as it both increases the cream

and gives it a rich yellow color. Corn meal is an excellent feed for color and quality of butter, but it often decreases the yield of milk when used alone; a mixed meal of oats, corn and wheat or rye middlings in equal quantities, is excellent feed for butter; but when the oats are used in excess, there is often trouble in churning. A new feed in this country is rice meal, which is the refuse from the hulling machine, ground into a fine meal. Its feeding value is theoretically high, but experience alone can fix its actual value. I am now using this meal and shall soon be able to give an opinion as to its value for milk and butter.

Fodders are of various kinds. The first in value is undoubtedly clover hay cut in an early stage. The next is orchard grass, clover and Kentucky blue-grass mixed. The mixed grasses of an old meadow which are chiefly red top, some of the fescues, with some timothy and blue grass, make a good hay for the dairy. Fodder corn grown especially for this use, and thickly planted so as to have their stalks and plenty of leaves, cut while in blossom and well cured in the shock, has proved with me to be equal to the best hay. Sweet corn of the large kinds is preferable to field corn; the Blount's White Prolific is a fine fodder corn, growing tall, having leaves to the bottom, and many half-grown ears when planted as late as June, and being very sweet. A few acres of this corn planted last season, turned out a large crop of the finest fodder, which gave a better yield of milk than mixed timothy and clover hay.

Roots are, however, the chief dependence of a winter dairy. Turnips and ruta-bagas should never be used. I would as soon feed onions to my cows. A delicate taste can even detect the flavor of turnips that have been stored on the barn floor upon which cows have been fed, although the cows have eaten none. There is no use in trying to believe that turnips will not flavor milk and butter if given to the cows immediately after milking. I have tried it oftentimes, and invariably my customers have complained of a taste in the milk, which they suspected was from dirty milking, and I can detect the scent and flavor of the turnips in the butter. Mangels, the Yellow Globe or the long red varieties being the best, are unexceptionable, giving much milk and that of a good, rich color. From one peck to half a bushel per cow, sliced and sprinkled with feed, will make a profitable feed for a dairy cow in full milking.

In feeding cows in winter, a daily ration of salt should be given. One ounce, or a tablespoonful per day, is a fair allowance for a cow. The want of salt will cause slow churning, and foaming in the churn, and butter not coming may often be attributed to this. It should go without saying that perfect cleanliness in food and water is of paramount importance. Where the dairyman intrusts the feeding to a hired man, the observance of cleanliness should be insisted upon as absolutely as honesty or sobriety. To use a dung-fork for mixing feed, or trampling upon hay or fodder with filthy boots, cannot be permitted with impunity. It will pay for the employer to keep one man specially to feed the cows where 10 to 20 are kept, and not permit him to handle manure or clean the cows, or to provide him with rubber boots for working in manure and in the yards, for the purpose of maintaining perfect cleanliness. Lastly, the water should be pure and given fresh and warm from a spring or well.

The Herdsman.

WINTER FEEDING FOR STOCK.—No. 2.

PROFESSOR E. W. STEWART.

Cattle.

CATTLE feeding represents our greatest stock interest, since the number of head now reaches at least 30,000,000 valued at $750,000,000; and sheep and swine only number two to five millions more each, so that the cattle interest greatly exceeds both of these. The only other stock interest that approximates to it in value, is that of horses, something over ten millions in number, estimated at $600,000,000. But the cattle interest represents the most important elements of animal food among civilized people—beef and dairy products. The feeding of cattle, in this country, has only lately entered upon its scientific stage—that stage in which all the elements of success are taken into consideration. It is only of late that serious inquiry has been made as to the cost of growing a pound of beef, but this apparently simple matter is very indefinitely understood either in this country or elsewhere. Perhaps in Germany the value of foods has been more carefully studied than in any other country, but even there the cost of a 1500-pound bullock has never been accurately determined. If we had the cost of feeding 20 calves from the time they were dropped until they averaged 1500 pounds live weight, with the cost separately determined for each three months, and the food consumed accurately noted, we should have a more complete test for determining the cost of beef than we can now refer to in all the knowledge extant. The investigations of the last fifteen years have brought out, in clear light, the important fact, that the cost of beef under the best system of feeding, is in proportion to the age of the animal—that is, the younger the animal the less it costs to put on a pound live weight—and, consequently, if a steer is grown to 1500 pounds weight in two years, it will cost much less than to reach that weight in three to four years. There have been so many cases of cattle reaching 1400 to 1500 pounds in 24 months, that this may be considered as an average attainable under a proper system of breeding and feeding, and a less result should not be considered satisfactory feeding. This requires a gain, from birth, of two pounds per day for two years. The first year should give a weight of about 900 pounds, as a full-fed animal gains faster the first year than the second.

The Calf.

The proper winter-feeding of calves is first in order. As we have just seen in reference to growing beef, the rapid growth of the young animal is of the greatest importance. Farmers, then, cannot afford to winter their calves in an indifferent manner, keeping them, as is too frequently the case, in a state of suspended growth till grass comes again, relying upon that to give them thrift. It costs two-thirds as much to keep calves in winter without any increase in weight, as it does to make a fine growth. The gain in full feeding, all comes from one-third of the food—two-thirds being expended to keep the calf alive without loss. Is it not, therefore, very bad economy to throw away two-thirds of the food required to make a good growth, in order to save the last third? All growth comes from the last third of the food in a full ration. When farmers fully understand this, they will cease to throw away food in starving young animals. Some farmers are careless even in keeping the calf the first summer, allowing it to gather all its food in a poor pasture after the short season of milk feeding. The calf thus takes on a stunted condition before winter comes. In such case the greatest skill is required to change this condition into one of thrift, and if it be not done, it would be much more profitable to skin the calf in the fall than to keep it in that stand-still condition, for its food through the winter will cost more than the calf is worth in the spring. Having treated in a previous article upon the importance of warm, well ventilated stables, it will be understood that calves are to have comfortable quarters. And, if the calves have come to winter-quarters in poor condition, the best food to start them, when it can be had is, six or eight quarts of skimmed milk with two quarts of oats and one pound of linseed oil-meal per day, with good hay. This ration for four to six weeks will start any calf in December that is not past recovery. But it will not often happen that the farmer has milk at this season of the year, so we must give a ration that is not difficult to obtain. Most farmers have corn meal and oats, and linseed oil meal is obtainable in almost any part of the country. Give each poor calf two pounds of corn meal, two pounds of oats, and one pound of oil-meal per day, in two feeds. This, with good clover hay or rowen, will soon change the thrift of the calf. Perhaps the farmer will say he cannot afford it; well, then he cannot afford to keep calves at all. This feed for 150 days will cost about seven dollars, as an average—in the West somewhat less. Now, calves with this ration ought to gain at least 300 pounds; whereas, if only fed hay, being poor on the start, they will not gain anything in weight. Will not these 300 pounds' gain in weight with the greater value per pound of the whole animal, be full compensation for this extra expenditure? This extra weight and condition will more than double the value of the calf in spring.

If the calves come to winter feeding in good, thrifty condition, they will winter finely upon two quarts of oats and one pound of oil meal. I mention the oil meal because of its sanitary value in keeping the stomach and bowels in a healthy condition. But, if it is not easy to obtain it, feed three quarts of oats per day to each calf with good hay, and you bring it through finely. If you have not oats, but corn and good clover hay, feed three pints of corn meal or shelled corn on a thin layer of hay in the manger; or, better, if you have wheat bran and corn meal, feed two quarts of bran and one quart of corn meal mixed, in two feeds. If you live near grape-sugar works, your calves may be fed still cheaper on four quarts of sugar meal and one pound of oil meal with hay, or the sugar meal with one quart of oats per day. The sugar meal is not a complete food in itself and should always be fed with a small portion of other grain. But whatever ration you adopt, feed liberally; in that will be found the most profit. For heifers intended for the dairy I have not given different rations from those for calves intended for beef, because they both require nitrogenous rations to grow the frame and muscles, and I have not given excessive ration that would injure young heifers intended for breeding.

Fattening Cattle.

This is a subject of great interest to the American farmer at the present time. Since Europe has opened up a market for all our surplus first-quality beef, it stands us in hand to study the question of economical feeding; for it must become the life-blood of our agriculture. The true system of growing the best beef begins with the calf and continues till the animal is ripe for market. But we must consider the best mode of fattening cattle that are ready for the last stage of feeding steers two and a half to three and a half years old. The most difficult problem to solve in fattening pertains to those cattle that have been raised on the old plan of slow growth. Their digestive capacity is small, comparatively, and it is exceedingly difficult to start the fattening process in a satisfactory manner. Having grown so slowly, they cannot, at once, assimilate food enough to make a respectable increase in weight. It must take a longer fattening period than with thrifty steers that have grown rapidly. The feeder must take this into account when he buys this kind of cattle to fatten. I have thoroughly tried the experiment, and find that it requires from two to four months to put such steers into a thriving condition. The ration best adapted to start thrift in this class of steers must contain a portion of flax-seed or linseed oil-meal Flaxseed ground with other grain, as mentioned last week, or oil-meal, has a most decided effect upon the secretory system—slicking the hair, loosening the skin, seeming to lubricate the whole animal machinery, and putting it in condition to assimilate other food. Take these steers of 1000 pounds-weight, and the following ration will have the best effect: one part of flaxseed ground with sixteen parts of corn—six pounds of this mixture, four pounds of bran or middlings, with 18 pounds of good hay, or ten pounds of hay, and ten pounds of straw; or three pounds of linseed oil-meal, six pounds of corn-meal and four pounds of middlings with hay or hay and straw; continue this for 30 or 40 days. Then increase the corn-meal to eight pounds, the other parts remaining the same for 30 days—again increase the corn-meal to ten pounds, oil-meal, middlings and hay as before, and continue this as long as it seems to be a full ration, say for 30 to 40 days. Now increase the corn-meal to twelve pounds, two pounds of bran, oil-meal as before, and continue this until ready for market.

This has proved a very successful ration with the writer, and it will transform these stunted cattle, if anything will, into nicely rounded beeves. But such cattle are not profitable to feed unless purchased very low. Of course, this ration may be greatly modified to suit circumstances—corn and oats ground together may be fed eight pounds of the mixture to begin with, and increased gradually as the beasts can bear it; or, corn meal and bran in equal weights, increasing as before; or, peas and corn ground together, starting with six pounds and increasing with one pint of cheap molasses dissolved in a gallon of water and used to wet the hay. This will give appetite, and the molasses is laxative. Corn fed alone to such steers creates a feverish and constipated state of the system, and the skin does not loosen.

For thrifty, well grown cattle, the following ration will succeed:—one pint of oil-meal, 10 pounds of corn-meal, four pounds of bran with hay and straw, and it will, under favorable circumstances, produce a gain of 2½ to three pounds per day. Western cattle are generally fed on corn and corn fodder almost wholly, in winter. The Germans would call this a bad ration; but these cattle have been well nourished on grass during the summer and come to the corn ration in a very thrifty condition: they thus keep their health better and generally fatten well on 20 pounds of corn and the stalks.

Sheep Husbandry.

ORIGIN OF LINCOLN SHEEP, "DASHES" OF BLOOD.

IN the RURAL of Oct., 11. Col. Curtis, in speaking of the Lincoln sheep, says they are a cross between the Cotswold and the Bakewell Leicester, a statement in which I can by no means agree with him. The original Lincolns were very large, coarse sheep, double the size of the Bakewell Leicesters and larger than the Cotswolds. To give them a better quality, however, breeders gave "dashes" of Cotswold and Leicester blood; but animals of this breed have still more than half of the original blood, which gives them their great size. The heaviest Lincolns run from 300 to 350 pounds, and there have been two instances, or two of 400 pounds. The Cotswolds run from 250 to 350 pounds, and the Leicester from 260 to 300 pounds. Each of these breeds has received "dashes" of blood from other breeds, but the breeders were careful to avoid any direct cross.

The "dash" of blood is given something in this way—and I know, because I was raised in the midst of the greatest sheep district in England and my father and self were well acquainted with breeders of Cotswolds and Leicesters, while another member of my family has now the only flock of pure Bakewell Leicesters in England and—well, as I was about to say, the "dash" of blood is given, say of the Leicester to the Cotswold, by a breeder of the latter looking through some flocks of the former and choosing one of the largest and most Cotswold-looking rams of the best quality, and using him with some of his finest ewes which have every good point but the one predominant in the Leicester ram, and then he uses a ram of this cross with his flock or with such part of it as his judgment tells him will be benefited by this infusion of new blood. Thus the Lincoln breeders chose Cotswold and Leicester rams to improve their flocks without doing the thing in too violent a manner.

G. G.

Col. Curtis, having seen the proof of the above article, on calling at this office while on a visit to the Dairy Fair, makes the following remarks:—

"Unless we are mistaken in our recollection, we were told by Mr. Gibson, manager for Wolcott & Campbell when their Lincoln sheep were imported, that the breed was formed by crossing the Cotswold with the Leicester. This statement agrees with G. G., who says they were improved with 'dashes' of Cotswold and Leicester upon the old heavy-bodied, long-wooled Lincoins. By Lincolns, we do not understand a distinct breed before these 'dashes' were made, but a name for the sheep of a locality. This is a common custom in England to call animals after the locality in which they were bred; thus, we have a half-dozen different names for Suffolk pigs, and we doubt not but the same peculiarity exists in regard to sheep, and that if the histories of the different breeds could be traced to their origin, it would be found that they all originated by crossing the Cheviot, Cotswold and Leicester; or, perhaps, the black-faced and white-faced sheep were the only foundations for all. We understand 'dashes' to be crosses, and this is what they are, and this is substantially what we mean, that the Lincoln sheep are made by crossing or dashing the Leicester with or upon the Cotswold. Close observers, with experience in breeding sheep, will undoubtedly come to the same conclusion if they should see the sheep and study their characteristics, even though traditionary accounts might be opposed. A 'dash' of Cotswold would make half Cotswold, and a 'dash' of Leicester would make half Leicester, leaving only a quarter of Lincoln after the double cross, and reducing the Lincoln with other 'dashes' to an eighth or sixteenth, etc."

Housing Sheep.

Mr. Jonathan Talcot should take a trip to the home of the Cotswolds; he would there see tens of thousands of them on cold, damp ground, eating the turnips which are sliced up for them by machines, after having been pulled up, thrown into heaps and covered with earth. A rick of hay is in some convenient part of the field, and from this the shepherd feeds his flock morning and evening, and the fattening sheep, which are the wether tegs and the draft ewes, have some grain or oil-cake given them once per day—generally at noon.

If these sheep were driven home and housed in stormy weather, the land would not have an even distribution of manure and urine, and as I never heard of sheep taking cold in this their natural state, it is probable they would be made tender and they would not be so healthy. I don't think the wool ever becomes wet through to the skin, and I don't believe they ever feel cold, for the Swedish turnips have a heating tendency, and it is so arranged that Swedes are always fed to them after Christmas, when cold weather is most severe.

Americans have no proper conception of sheep husbandry, as it is conducted in England. The idea of housing the sheep with such buildings as exist there, is out of the question. Besides, on every farm animals of different ages and sexes are kept separate, and a shepherd would have to run one lot after another home, if there were places for the purpose, till it would take him more than half his time going to and fro. As for my giving no argument that the sheep would not have been better off for housing, it is only necessary to say the wether tegs, at the close of the turnip season, will shear from 10 lbs. to 14 lbs. of washed wool (all wool is washed there), and the weight, when dressed, will be from 100 lbs. up to 150 lbs., according to skill in feeding. I have myself sold draft ewes in March, which weighed 160 lbs. each, dressed weight.

If the small number usually kept in the Eastern States were only kept in England by

sacrificing the benefit of the present course of management and having new barns built, it is possible the weight mentioned might be increased, and I know that the sheep exhibited for premiums at the agricultural shows are favored in this respect, but they are seldom good for breeding afterwards, and generally go to the butcher after the show is over.

G. G.

The Poultry Yard.

FATTENING POULTRY FOR MARKET.

FORREST K. MORELAND.

How many farmers there are who, although they are good farmers in other respects, are very slovenly and negligent in regard to their poultry. Were you to inform one of them that his pork was not properly fattened, or that his dairy had not been profitably managed, he would be very apt to resent the intimation as an insult. The fattening of pork is a matter worth attending to properly. If this is not done, the farmer is sure to know it when he comes to market. The dairy is even more important. The farmer prides himself not only on owning good stock, but in caring for them to the best of his ability, making them as profitable as possible during the year; for a large proportion of our farmers' prosperity depends upon the dairy. Why is it that the majority of them seem to be so constituted that it appears to be a moral impossibility for them to attend to the small things incident to farm life. I have known good farmers, men capable of cultivating premium fields of corn, wheat and potatoes, who were utterly unable to understand the value of a good garden and had none worthy of the name.

This peculiar quality of the minds of our farmers is most emphatically shown by the attitude the majority of them occupy towards the poultry industry. I do not know a single farmer who takes any especial interest in poultry. Many of them give the proceeds of this department to their wives and daughters for "pin-money." I do not find any fault with this; it is as it should be; but even then they should take some little interest in the matter. Fowls need comfortable quarters and suitable food; if deprived of either, they will not thrive. The supply of both of these necessaries of fowl life depends somewhat upon the good-will of the farmers. I know that some of these argue that fowls do not amount to much, and that they are not "worth the trouble." Let us see: I think one important difficulty in making them plainly profitable, lies in the manner fowls are usually fattened. The appearance of dressed fowls in our meat markets is often enough to frighten even not very fastidious poultry eaters. The chickens (?) weigh from one-half pound to one pound and a half; the latter is considered a good weight and is rarely reached. They are poorly picked and the skin tears in many places; but it is the size of a large proportion of the chickens in market to which I would call attention; they are almost all under two pounds in weight and at from eight to ten cents per pound dressed weight, it certainly does not pay to raise such chickens. I think I can hear the great majority of farmers say, "I told you so." But there is a remedy for the evil, and the fault is so great that it is worth some little trouble to seek a remedy for it.

If farmers aimed to keep the best breeds of fowls as they do of swine and sheep, the poultry interest of the country would make a long stride in advance. I do not propose to discuss in this place the merits of the different breeds of poultry. If country folks were to feed their young chicks as they do their calves and pigs, the chickens would weigh much more and be much more profitable than under present treatment. Talk to any enterprising farmer about his calves, and the chances are ten to one that he will ventilate his peculiar views about rearing calves in something like the following style: "Calves must be kept growing *all* the time from birth until maturity; if they are starved for a few days, it is so much growth lost, and it is growth that the calves cannot regain." Across the way from the calf pasture there is a chicken coop with a brood of young chickens that have had no feed since yesterday and no water since the day before. But these young chickens are very different from young calves. Were I to enlarge on the proper treatment of growing chickens, this letter, intended to be very brief, would grow to the dimensions of a treatise on poultry raising. I propose to call attention as briefly as possible to a few hints on fattening poultry.

It is a mistake to suppose that a fowl one or two years old cannot be fattened so as to be tender. Above two years or thirty months, birds should not be kept. On the other hand, the chickens should be kept long enough to have the proper amount of flesh or lean meat. It will be but a sorry job to undertake to fatten a growing chick or one that has been starved. If chickens have been fed as they ought to be fed, they are ready to fatten at the age of four or five months. For my own table I prefer to take them from the yard just as they are at that age, without any extra fat; but for the market a different mode must be adopted. From their habits chickens do not take on flesh rapidly unless confined. A friend of mine is in the habit of building a large pen of rails, like a stock pen six or eight feet high and covered. In this he confines from 25 to 50 chickens while they are being fattened. Although it is much better than allowing them to run at liberty, still it is objectionable as affording too much exercise. My own plan, which is very satisfactory for feeding a small number of fowls, is to provide as many coops as there are birds to be fattened at one time, so that each one may be confined alone and out of sight of all others. Each pen is as neat as may be, about one foot wide, eighteen inches long and twenty inches high, closed on all sides except the front; with no floor, but cleats so placed that a wooden platter covered with fresh earth, may be used for the floor. The front of the pen should be of a few slats nailed up and down. The feed and water tins should be placed outside, as with pens of the dimensions I have described, there is no room in the pen for anything except the fowl. The water tins should be replenished twice in the day and the food tins at least four times.

The most desirable food for fattening fowls is buckwheat flour. The French poultry-raisers esteem it very highly, and it is much in vogue in all large establishments. Farmers can usually procure it for this purpose at as little cost as any other grain. If for any reasons it cannot be obtained, a mixture of equal parts of corn meal, ground oats and barley flour will be found very satisfactory. A little fresh meat, chopped fine and given daily will not come amiss. And, as poultry are at all times fond of vegetables and green leaves, they should not be neglected in this particular. A few cabbage leaves, if nothing else offers, will answer the purpose. They will do much to insure good health, and an unhealthy fowl will feed to but poor purpose. Every possible means should be adopted to insure a good digestion; for this purpose a handful of gravel should be thrown into the pen, or a few broken oyster shells. For the same reason, the fowls must be kept perfectly quiet, and their coops be darkened for a short time, say a couple of hours, after each feeding. This may be accomplished by dropping a cloth over the front of the pen. If these few suggestions are adopted, and the feed is abundant and good, the process of fattening fowls for market will not necessarily take more than two or three weeks, at the farthest.

Care should be taken to prevent the pens from becoming infested with vermin. Before any fowls are placed therein, the pens should be thoroughly cleaned and white-washed. This should be repeated every time a bird is removed and before another is placed in the pen. If one should become infested with vermin, a little sulphur rubbed on at the roots of the feathers will be pretty sure to work a cure. All these suggestions must be adopted and properly carried out, and the result will be a great increase in the weight of the fowls, and a corresponding improvement in the quality and appearance of the bird. When the fowls are sent to market, they will not only command a higher price per pound, but the greater weight acquired at less cost than the smaller weights of fowls not half fattened while running at large, will nett the farmer a much larger profit per pound, in proportion to this outlay, than if the poultry were fattened in the old way.

If extra fatness is desirable, the fowls, if there are not too many of them, may be *crammed* during the last week. A mixture of buckwheat and barley flour or corn meal is made into a dough, and fashioned into rolls about the size of a pencil. Cut these into sections about two inches in length, and dip the pieces in milk before placing them in the bird's mouth. The proper quantity to feed a fowl at one time will probably be learned after a few have been stuffed to death.

The French peasants are such adepts at this one of the fine arts, that they use a sort of a ramrod to assist the fowl in swallowing. Could they assist the bird in digesting its food the whole thing would be mastered. But the process of cramming is wholly unnecessary, and in the hands of the unskillful, is not seldom cruel, and too often the occasion of loss to the poultry raiser. I think this matter of fattening poultry for market is a subject well worthy of the earnest consideration of thinking farmers. When it is known that poultry can be produced as cheaply as pork or beef—for such is the fact—more farmers will turn their attention to the industry, breed and fatten birds worth shipping, and ship such poultry to our large cities at a good profit to themselves. And, what is much more to the purpose in a financial point of view, by so doing a demand for good poultry may be enlarged or created at remunerative prices.

Everywhere.

RURAL SPECIAL REPORTS.

MASS., Chelsea, Suffolk Co., Dec. 15.—We have a new variety of tomato called the Dayton Purple, which is large, smooth and very firm and a good keeper. C. A. B.

MICHIGAN, St. Johns, Clinton Co., Dec. 5.—We have unusually warm weather for this time of the year—plenty of rain now. The summer was very dry, with no rain when it was most needed for the benefit of the corn, so the latter was a short crop. W. T. B.

IOWA, Fredonia, Louisa Co., Dec. 8.—Corn is worth here 30c.; rye, 70c.; good hops, $2.30 per 100lbs. There is every prospect here of an open winter; no snow hitherto, except a few light falls that soon disappeared; no frost in the ground, except what has gone there during the last 24 hours. H. J. B.

MO., Milford, Barton Co., Dec. 12th.—Our corn crops were good, considering the drought; will average from 30 to 50 bushels per acre. Wheat was good, but rather a small yield. Oats a very light crop—the lightest for a number of years. Stock of all kinds bring a good price, and money is more plentiful than for several years. *No cold weather yet*; the ground has not frozen an inch. No snow; country settling up fast; land cheap yet. A. A. S., M. D.

KANSAS, White Water, Butler Co., Dec. 10.—The White Water Sorgo Association manufactured the past season 20,000 gallons of sirup, but as yet only a limited quantity of sugar. Our supply of sirup is inadequate to the demand. Price 40c. to 60c. per gallon. Farmers can grow enough sorgo for 200 gallons of sirup with as little labor and expense as 100 bushels of corn. The blades and seed are valuable for feed; the bagasse for fuel; the skimmings for vinegar, and much of the sirup granulates. The quality of butter depends much upon the cow, more upon the feed, but most upon the handling. The flavor of sorgo is equally dependent upon the seed, soil, and manufacture. The same varieties of seeds planted on like soils produce unlike flavors; while the same juice, differently handled, furnishes a variety of flavors. Any deterioration of the cane, admixture in the soil of foreign elements or mistake in boiling locks the impurities in, which otherwise may be removed by fire alone. Sorgo is as susceptible of taint as milk and butter. The sorgo tang belongs just as properly to sorgo as the butter tang does to tainted butter.
White Water, Kans. O. W. H.

COLORADO, Burnet, Dec. 10.—A year ago I sowed some black-walnut seed, and now the plants are 18 inches high. From peach-stones sowed at the same time I now have seedlings three feet high. Both have done well the first year. Not so European larch, Norway spruce and Scotch pine; these are all dead, though I shaded them with lath frames, and watered and petted them as well as I knew how. Last spring I sowed a little catalpa speciosa seed; the plants came up well, and made from eight to ten inches of growth, and, to all appearances the trees will do well here. A few are covered slightly. About the same time I put out a few Raspberries, Blackberries, Strawberries, and Grapes. The Raspberries did the poorest, the Strawberries the best; out of 33 of the former three only have managed to survive. All this sort of thing is experimental in this new country. J. W. S.

TEXAS, McKinney, Collin Co., Dec. 8.—Of twelve varieties of wheat I am testing, the Clawson looks the best at this time. Texas farmers are preparing for a large cotton crop another year. Cotton and wheat are the "money" crops here. W. N. W.

The Querist.

ANSWERS TO CORRESPONDENTS.

Scale of Points of Jersey Cattle.

W. S. M., Martinsburgh, W. Va., asks what is the scale of points by which Jersey cattle are judged at fairs.

ANS.—The following is the scale adopted by the Jersey Cattle Club, on April 21, 1875, and which still remains in force:

Points.	Counts.
1. Head small, lean and rather long	2
2. Face dished, broad between the eyes and narrow between the horns	1
3. Muzzle dark, and encircled by a light color	1
4. Eyes full and placid	1
5. Horns small, crumpled and amber color	3
6. Ears small and thin	1
7. Neck straight, thin, rather long, with clean throat, and not heavy at the shoulders	4
8. Shoulders sloping and lean, withers thin, breast neither deficient nor beefy	3
9. Back level to the setting on of the tail, and broad across the loin	4
10. Barrel, hooped, broad and deep at the flank	5
11. Hips wide apart, and fine in the bone, rump long and broad	4
12. Thighs long, thin, and wide apart, with legs standing square, and not to cross in walking	4
13. Legs short, small below the knee, with small hoof	3
14. Tail fine, reaching the hocks, with good switch	3
15. Hide thin and mellow, with fine, soft hair	4
16. Color of hide where the hair is white, and udder and inside of ears, yellow	5
17. Fore udder full in form, and running well forward	8
18. Hind udder full in form, and well up behind	8
19. Udder free from long hair, and not fleshy	5
20. Teats rather large, wide apart, and squarely placed	6
21. Milk veins prominent	5
22. Escutcheon high and broad, and full on thighs	8
23. Disposition high and good-natured	3
24. General appearance rather bony than fleshy	6
Perfection	100

In judging heifers, omit Nos. 17, 18 and 21.

The same scale of points shall be used in judging bulls, omitting Nos. 17, 18, 19 and 21 and making moderate allowance for masculinity.

It is recommended that judges at fairs do not award prizes to animals falling below the following *minimum* standard, viz: Cows, 70 counts; heifers, 55 counts; bulls 50 counts.

Miscellaneous.

W. H. Brown, Afton, Union, Co. Iowa, asks, 1, whether Rennie's White Field Corn would be likely to do well in that locality; 2, for the address of Daniel Steck, of Lycoming Co., Pa., who told the RURAL some time back how he raised 97 bushels of corn to the acre.

ANS.—1. Reunie's White Field Corn, being a Canadian sort, would probably thrive in the above latitude, but if the experiments with the Blount corn all over the country, this year, have proved one thing more strongly than another, it is the necessity of testing each variety in different places, in order to be able to determine whether it will succeed there. 2. We give our friend's address in full, so that Mr. Steck can correspond with him direct, should he wish to do so. We do not feel at liberty to give the addresses of our contributors, as frequently explained here.

D. F., Kilsyth, Ont., Canada, asks where several of the varieties of potatoes mentioned in our Potato Number can be obtained.

ANS.—From B. K. Bliss & Son, 34 Barclay St., N. Y. Price list will be published in spring.

C. V., Tranquility, N. J., sends us some ore and says he would like to know what we think it is.

ANS.—It is an iron ore known as brown hematite—chemical symbol Fe^2O_3, combined with three equivalents of water. The water will be driven off by heating; it will then become red hematite, or blood-stone.

J. R., Lawrence, Texas, asks where wheel harrows are made.

ANS.—Wheeler & Melick Co., Albany, N. Y., Warrior Mower Co., Little Falls, N. Y.; Jno. W. Stoddard & Co., Dayton, Ohio.

L. E. Y., Riverhead, N. Y., asks for the name of a dealer in dressed poultry in this city.

ANS.—J. B. Helfrich, Park Place, between West St. and Washington St.

Miscellaneous.

BEE NOTES.

HAS anybody noted the results of breeding in-and-in on bees? Is it not frequently the cause of disease and the dwindling down of stocks? Many old bee-keepers of my acquaintance have almost given up; their stocks dwindled from 75 to 100 down to three or four. Their never having introduced new strains for a number of years, I believe to be the sole cause. That I have been more successful than my neighbors this year I believe is owing to my having purchased stocks from different localities. If my theory is right, it would be a good plan to buy or trade for stocks from a distance, still keeping some of our own to cross with the strangers. This has been a good year for bee-men in Canada. Where extractors were used, hives averaged from 75 to 100 pounds of honey, Mr. Jones, of Beaton, obtaining the nice quantity of 70,000 pounds, or 35 tons of honey. T. F. F.

HORSE SALE.—L. S. Follett, of Hastings, Minn., has just purchased of the Messrs. Smith & Powell of Syracuse, New York, the Clydesdale stallion, Souter Johnnie, imported last September. His sire is the celebrated Tam O'Shanter, by Rantin Robin. Souter Johnnie has been a great prize winner in Scotland, having won five first prizes in competition with some of the most famous prize winners of the British Isles. Mr. F. also took Maggie, the three-year-old Clydesdale mare, imported at the same time. Her sire, Sampson, was by Emperor, dam by Gen. Williams. This mare is a model in form, of great strength and power, and cannot fail to make a fine breeder. Mr. Follett has a large and new field to work in, and certainly deserves credit for his enterprise in introducing so meritorious a class of horses into the State.

Four page index removed here.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address THE RURAL NEW-YORKER,
78 Duane Street, New York City.

SATURDAY, DEC. 27, 1879.

SPECIAL.

Many of our friends write to inquire when their subscription terms expire. The answer is before them on every paper. Under the title-head on first page is printed our *whole number*. The present paper is, for example, 1561. If the label on the mail wrapper is the same, the subscription term expires with this number; if 1562, then it will expire with next number; if 1613, then it will expire one year hence, having 52 numbers yet to run, and so on. With this constant reminder before them, we do not deem it necessary to advise our patrons individually of the expiration of their subscription terms.

A FRIEND writes us from near De Land, Fla., that the majority of the people there are very poor; that hundreds of thousands of dollars have been laid out in orange culture, and it will be years yet before the result can be known. The State, however, has, he says, a good prospect for other products besides oranges, if new settlers will turn their attention to them. But every one seems to get the orange fever as soon as he goes there.

A THRICE-MERRY Christmas to our readers! To a great majority of them this should prove the merriest of Christmasses. The RURAL sends its kindliest greetings to all, and its best thanks for the many quite extraordinary expressions of their approval of our work during the present year. With such encouragement, and with the pleasant prospect of an increased circulation for 1880, we should feel sadly remiss if we abated our efforts towards continued improvement.

A CONSIDERABLE number of our readers apply for our plants and seeds, forgetting to send any postage stamps. It surprises us that this occurs so often. As we bear a part even of the postage expenses, it is not *fair* to us that our readers should be so unmindful, and, although we have not yet done so, we are tempted to throw such letters aside. Others of our readers say in effect, "Please send my plants and seeds at once," showing that they have not even taken the pains to read throughout the terms of our "free distribution," which were plainly presented and emphasized.

OUR Premium List for 1880 consists of four pages, the size of the RURAL, and of 45 fine engravings. Whether or not readers desire to get up clubs and compensate themselves for so doing by drawing premiums, its perusal will give both amusement and instruction. Many of the articles are of late invention, such, for example, as the Mechanical Orguinette, and all are the best of their kinds. There are few households that will not find in this Premium List something needed therein. The lowest cash price is given for each article, so that those who cannot find time or inclination to form clubs, can ascertain all they need to know about it. It should be borne in mind that we do not *sell* anything except subscriptions to the RURAL NEW-YORKER. Any of our friends intimating by postal that they desire a Premium List, will have one mailed at once free of charge.

SPECIMENS OF OLEOMARGARINE

Purchased by the International Dairy Association, at the request of many prominent dairymen, **FOR EXHIBITION AND SAMPLING.**

THE above is a facsimile—except that the letters there were about half-a-dozen times larger than those here—of a notice calling the special attention of visitors to half a dozen tubs of grease-butter, carefully selected, and exhibited during the past week in the most prominent part of the Fair. The President of the Fair Association is interested in the manufacture of this product, and is the largest dealer in the stuff in the country. He is, therefore, anxious to advertise it. Now, gentlemen managers of the Fair, give the names of a few of the many prominent dairymen who are also anxious to advertise an article that has inflicted and is now inflicting a monstrous injury on the dairy interests of the country.

AT a late meeting on the land question in Ireland, one of the speakers said that the rents which the landlords got for the last year or two did not come from the soil, but from America. He might, with at least a close approximation to the truth, have extended the time to the last twenty years. Among the millions who flock to these shores from all countries, there is no class that send so much of their earnings to the relief of those they have left behind them, as Irish laborers and Irish servant-girls; while the remittances to the old folks at home from those absent ones who have ampler means are generally more generous in amount, if not in good-will. For years back thousands of the small tenants all over the Emerald Isle have had the roofs kept over their heads by the periodical receipt of help from some "boy" or "girleen," mindful of them while toiling and saving among us. The land has merely supported those who tilled it, while the rent, or a large portion of it, has come from this country. The rack-renters, however, seeing the apparent prosperity of the peasantry, and ignorant or careless of its cause, have been constantly putting up the rents until the last possible farthing has been wrung from the tenants, so that now, when bad crops stint the livelihood obtained from the soil, there is nothing laid by for a "rainy day" on which the wretched peasants can fall back, and the discontent of generations naturally finds vent in threats and turbulence.

The Produce Exchange of this city is now violently agitated about the adoption of the cental system in the marketing of produce. On the 31st of last May it was resolved, by a vote of 485 against 232, to buy and sell grain and other produce by the cental of 100 lbs. At that time, those engaged in the grain trade were mostly in favor of the measure, but in the interval a change has occurred in their views, and at present nearly all of them are bitterly opposed to the innovation. While acknowledging that the adoption of the system must ultimately take place, their objections to its use at present are mainly based on the temporary inconvenience incident to the change. Of all the other chief markets in the country, the Exchanges of Baltimore, Toledo and Chicago alone are absolutely opposed to the system, while all the others favor it more or less strongly. The grain dealers here, however, insist that so long as the change is not universal throughout the country, those doing business where it has not occurred will at first have an advantage in buying and selling according to the old system, in a feverish market, owing to the embarrassment caused by the necessity of calculating, amid the distraction of bidding, the sum of so many bushels of 60 lbs., in centals of 100 lbs. There are, of course, minor inconveniences also in the way of clerical work and novelty. As noticed last week, the action of the Exchange in May was confirmed by a vote last Saturday week, and the indignation of the grain men then mentioned, has cooled but little in the interval. A compromise is at present expected between them and the other interests in the Exchange, but the nature of this has not yet been decided on. That the decimal system will, ere long, be widely introduced in this country in other matters as it is now in financial transactions, there is little doubt, but the change should be either so gradual as to cause no inconvenience, or Congress should legislate on the matter, so as to enact uniformity in all parts of the country.

REMEMBER THE DAYS OF YOUR CHILDHOOD.

WHY do not all of us to whom God, in His fatherly love, has given the care and comfort of little ones, oftener remember our own feelings in the days of our childhood in our treatment of them? Few, if any, are those among us who, looking away back to that dimly-remembered era of quick impulses and fresh, keen susceptibilities, cannot recall moments of hot indignation at petty slights or positive injustice on the part of those over us. Of course, with our present severe sense of the duty of unquestioning submission on the part of children—a sense that comes with age, and with age only—we can all see that such a sentiment is rebellious, and should never find a place in the mind of the model child. But the model child is too good for this world and, oh, the pity of it! always—well, nearly always—dies young, so that, alas! very few of us old folks ever belonged to that very exceptional class. We have nearly all, therefore, experienced this sort of feeling at one time or another in our bread-and-butter days. If it occurred seldom or on slight provocation, or if a general course of loving kindness in the conduct of those over us, or a naturally good disposition on our part, has rapidly obliterated it, it has rarely had much influence on our after-lives; but when it has, frequently or in flagrant cases, excited the tendency to resentful passion that often is innate even in juvenile human nature, Good God! how many children, even of a promising character, has it soured in disposition, or driven to wayward courses and rendered a curse instead of a blessing to parents and kindred!

Oh! fathers and mothers, and all you to whom the Great Father has assigned the formation of the character of men and women of the next generation, in your treatment of them now in their childhood, for God's sake, for your own sake, and for their sake, be a little more mindful of your own experience at that susceptible and formative period. Every week one comes across faces so cold, selfish, and adamantine, that one wonders if they were ever beautified with the warmth, generosity and mobility of youth. A bitter reproach is such an emotion to the object that has excited it. Yet, when one thinks of it, how much more numerous are the characters deserving a like censure in that they, too, seem never to have known the sensations of childhood.

EMBELLISHMENT OF COUNTRY SCHOOL GROUNDS.

WE are glad to see that public attention has been called to this subject, for although the discussion of it may not have the effect of immediately improving all school premises, yet it is the forerunner of public sentiment which indicates a growing interest in the matter, and predicts with certainty that improvements will be made in a not distant future. The idea comes from progressive Michigan, and in a late RURAL Secretary Garfield expressed some views upon the subject. Is it desirable to ornament the grounds? There is no question of the desirability to ornament the grounds surrounding our common schools wherever it is possible to do so. Next to the home, the school is the place where children spend most of their time, and the more attractive the place is made the better for the purpose assigned. A neatly kept school-garden will also serve to inculcate ideas of neatness, and help to develop a taste for the beautiful.

Co-operation in the matter by the people in the district is necessary in planting and laying out the grounds; but this done, the teacher and school directors should be the only persons in authority over the premises. The trees and shrubbery should not be expensive, and they should, of course, be of a character to suit the extent of the grounds. Many of our native plants could be employed to good advantage, but they should not all be common species. A few trees and smaller plants, remarkable for their flowers, foliage or fruit, which are not to be found anywhere else in the neighborhood would serve greatly to attract attention and create an interest in the youthful minds. To make the plants useful in the economy of the school, the teacher should not only have a knowledge of botany and horticulture; but he should be as enthusiastic upon these subjects as upon grammar, arithmetic, or anything else he has to teach. Here it is that the plan will be apt to meet with difficulty. Few teachers of our common schools have more than a very elementary knowledge of plants and their culture, and fewer still can present the subject in a manner that would be really interesting and instructive to children. A few trees and plants having some peculiar features, would be most likely to engage the attention of both teachers and pupils, and the interest awakened, they could gradually advance to common garden plants. Let the school grounds be embellished by all means. By the exercise of a little good will, a little good taste and the employment of a little expense these now woefully neglected places can be made objects of attraction, and educating in their influence, to young and old.

BREVITIES.

THE RURAL is, of course, this week much cut up by its index.

BEURRE SUPERFIN, an excellent pear, does well on the quince in England.

MR. DYER writes us that he has plum trees set in his hen-yards and they fruit well.

"BOTANICALLY," says the Gardeners' Chronicle, "the Camellia is but a glorified Tea plant." Is there any danger of Gen. LeDuc's turning into a Camellia?

IT is a duty which every parent owes to his children to make the home cheerful and festive for the Holidays. Those homes which do not regard such "foolishnesses" are the ones which cannot keep the boys on the farm.

ONE of our veteran agriculturists said to the writer a few days ago that Cow Peas would not ripen in this climate. This is substantially a mistake, as a considerable quantity in our barn from the past season's crop, will prove.

WE learn from one of the faculty that the State Ag. College, Fort Collins, Colo., opened September 1, with five students, and closed last week with twenty. Over fifty have already applied for admission next term. This is as it ought to be.

A WEALTH of very seasonable information about feeding farm stock enriches this issue. The proper care and management of all domestic animals on the farm will have even more of our attention and space in the future than in the past.

FROM the success of the first notable experiment in ensilage in this country, as described elsewhere, it would seem that the next agricultural "boom" might be in that direction. Mr. Bailey thinks it possible to keep four cows for a year upon the ensilaged corn fodder raised from one acre of land.

THE value of our "EVERYWHERE" to those who have an interest in crop prospects and the products of the different parts of the country, will appear upon glancing over the Index of that department. The climate, educational advantages, market facilities, etc., etc., of almost any given place may thus be easily obtained.

"OUR English conceit as to all improvement," says the London Ag. Gazette, "is like an extinguisher which is endeavoring to stand upon its narrow end. It is now well-known to all persons who have experience that, in thrift, ingenuity and making things go far and pleasantly, the French are far in advance of ourselves, and that from no Continental nation have we so much to learn as from the French." A frank confession is good for the soul. The above *is* a frank confession for a thoroughbred English farm paper.

THAT iteration and reiteration have much virtue in securing at length the object sought, has been repeatedly proven both before and since the date of the parable of the unjust judge. Hence we once more insist upon the necessity of having in the State, and in every State in which such institutions have not already been established, an Experiment Station, to which each farmer may send samples of fertilizers to be tested. What Prof. Caldwell has well said elsewhere on this topic obviates any necessity on our part of speaking at greater length on it here.

AT length Congress has found time to pay some attention to the agricultural interests of the country. On Thursday last the Senate and House passed similar resolutions for the appointment of a sub-committee of the Committees of Agriculture, to investigate the system and workings of the Department of Agriculture, with a view of extending the benefits conferred by the Department for the advancement and protection of agricultural interests throughout the country. The chief advocate of the measure in the Senate was Senator Johnson, Chairman of the Committee of Agriculture, while in the House Mr. Lefevre, Member of the House Committee on the same subject, spoke forcibly in support of the resolution.

WE clip the following from the good old Germantown Telegraph:—The editor of the RURAL NEW-YORKER has, with a few other experts in seed-planting, taken the ground that bug-eaten peas will not germinate so as to produce any kind of a crop. We have taken the opposite ground so far as to say that we have seen very fair crops produced from such peas when not too badly eaten up. He challenges us to the effect that we cannot obtain fifteen plants from a hundred of bug-eaten seed in a very heavy wager—about a million of dollars, if we are are not mistaken—and we have accepted it on the condition that we can obtain the seed. If any of our readers shall have such seed in the spring we will thank them for a hundred of them; and if we win the bet, they shall come in for "snacks" to the extent of $500,000.

JUST as we go to press we learn with much regret of the untimely death, at the age of 47, of Mr. H. N. F. Lewis, who began his journalistic career 28 years ago in the office of the RURAL NEW-YORKER, when he was only 19 years old. Since then he has owned or been editorially connected with several papers, notably with the Western Rural, which, under his able control, deservedly won a fine reputation, a large circulation, and great influence all over the West. The Chicago fire of 1871 having destroyed his property, greatly crippled his resources, and although he struggled bravely to uphold the old-time character of his paper, it passed out of his hands in 1873, since which date, hard times hampered his efforts in other ventures. His death will be heartily regretted by a wide circle of friends all over the country.

OUR readers have already several times had our opinion of the "American Banner" Rose, offered for the first time, in the early part of this year, for the exorbitant price of five or six dollars each. The buds are small; but upon a white or rosy-white ground are distinct stripes of red. The flower in bloom is semi-double, of small size and feeble endurance, resembling a half-starved Bon Silene. We learn that the *buds* of "American Banner" are selling, or have recently sold, in this market for 25 cents each, which is to us no less a matter of surprise than that the plants should have been sold for five dollars each. Oftentimes the popularity of a new plant will depend upon some little something or other that, at the outset, is liable to be overlooked. The "American Banner," in this case, is most striking before it is unfurled, and this is the "something" to which we failed to attach due importance.

Literary Miscellany.

IF WE KNEW.

If we knew the woe and heartache
Waiting for us down the road,
If our lips could taste the wormwood,
If our backs could feel the load,
Would we waste the day in wishing
For the time that ne'er can be?
Would we wait with such impatience
For our ships to come from sea?

If we knew the baby fingers,
Pressed against the window pane,
Would be cold and stiff to-morrow—
Never trouble us again—
Would the bright eyes of our darling
Catch the frown upon our brow?
Would the print of rosy fingers
Vex us then as they do now?

Ah, these little ice-cold fingers,
How they point our memories back
To the hasty words and actions
Strewn along our backward track!
How these little hands remind us,
As in snowy grace they lie,
Not to scatter thorns, but roses,
For our reaping by and by!

Strange we never prize the music,
Till the sweet-voiced bird has flown;
Strange that we should slight the violets
Till the lovely flowers are gone;
Strange the summer skies and sunshine
Never seem one-half so fair
As when winter's snowy pinions
Shake their white down in the air.

Lips from which the seal of silence
None but God can roll away
Never blossomed in such beauty
As adorns the month to-day;
And sweet words that freight our memory
With their beautiful perfume
Come to us in sweeter accents
Through the portals of the tomb.

Let us gather up the sunbeams
Lying all around our path;
Let us keep the wheat and roses,
Casting out the thorns and chaff;
Let us find our sweetest comfort
In the blessings of to-day,
With the patient hand removing
All the briars from our way.

IN FOLLY'S NET.

(Continued from page 827.)

"What did she say? Did he drink it?" She cried out, as if the words hurt her, "Yes he drank it."

"What followed?"

"She asked him if she should send to Edinburgh for medical aid, and in answer he asked her if she wished him to live, as his death would set her free?"

"What answer did she make?"

"She could not bear that, or words to that effect, and he said that he was dying, and asked if her hatred would die with him."

"Was that all?"

"All that passed between them while I was in the room; shortly after I was called away."

The next evidence was that of Dr. Mackenzie, and the former part of his testimony coincided exactly with that of his medical colleague.

"I believe you remained in the room after Mr. Powle?" said the junior counsel.

"I remained with him until he died."

"What passed there after Mr. Powle's departure?"

"But little speech passed. Once Mrs. Blair offered her husband a glass of water, but he refused to take it from her hand."

"What did he say?"

"Not from her—she hates me."

"What did Mrs. Blair say?"

"She appeared greatly terrified, and wished to leave the room."

"Did you prevent her?"

"I said, 'Your place is here;' and she said she could not bear it—to let her go; upon which her husband said 'Stay.'"

"What did she say?"

"She said, 'It is cruel to keep me here; you will kill me.'"

"Did she stay?"

"Yes. Shortly after he died."

"How did Mrs. Blair behave?"

"Her terror was excessive, especially when I said that her husband died from the effects of poison."

"Will you tell us what passed?"

"She put her hand up to her head, and cried out in a shrill voice 'No, no,' and moving across the room, fainted and fell."

"Did you see her again?"

"Yes, I attended to a hurt she received in her fall, but she was not conscious."

"Did you have any other conservation with her?"

"Yes, the next evening she sent for me."

"For what reason?"

"She entreated me to oppose an examination and inquest; to stop it in fact."

"What was your answer?"

"I said it was impossible."

"Well?"

"Mrs. Blair said she would give any sum of money, make any sacrifice to prevent it."

"You told her it was impossible?"

"Yes, and she fainted."

"That is all, I think, Dr. Mackenzie."

But Sir David Cairnes interposed.

"One moment, if you please, Dr. Mackenzie. You say that Mrs. Blair appeared greatly terrified at hearing the cause of her husband's death. Do you think it unnatural that a young lady should feel a certain amount of terror at such a terrible occurrence?"

"Unnatural! No," said the witness, looking rather confused; "but Mrs. Blair's terror appeared to me exaggerated."

"Do you think any terror exaggerated on such an occasion? If Mrs. Blair had dropped down dead instead of senseless it would not have appeared strange to me."

Dr. Mackenzie left the witness-box looking rather ashamed. The few words addressed to him by Sir David had been spoken with clear, concise, cutting contempt, and the advocate's steel-blue eyes had matched in their expression the disdain of his words.

The next person called was the butler of Blair Gates, Bransby, who repeated, apparently with great reluctance, the words he had overheard used by Jean on the New Year's-night before Mr. Blair died:

"I am weary of this bondage—I will submit to it no longer. If you will not give me freedom, I will make myself free! I do not care for shame! If you will not liberate me—I will liberate myself! I am a desperate woman—so beware!"

The man spoke huskily, giving his evidence most unwillingly. Jean was a favorite among the upper servants of the household. Mr. Blair naturally haughty and imperious, had not been so.

The next name called out was that of Maria Collins, and a murmur went through the court when the maid, who was sitting by the prisoner's side, rose, and looking very pale and bewildered, made her way to the witness-box.

"You have been for some years in Mrs. Blair's service, I believe?"

"Yes, sir."

"You have been with her at Blair Gates?"

"Yes, sir."

"I believe she was on bad terms with her husband?"

"She was not happy, sir," answered Collins, with her eyes full of tears.

"I am going to ask you a question which you may take some time to consider. Did you ever, at any time, hear Mrs. Blair wish her husband dead?"

"No, sir," said the woman at once.

"Think well. Did you ever hear her say that she would not be happy until he died, or words to that effect?"

Collins hesitated and stammered

"You are on your oath, remember."

"I only remember this, sir," she said at last. "Once when she was unhappy, I said happier days were in store for her, and she said——"

"She said?"

"That happier days could only come to her when he died. She was in great trouble, my lord," added Collins, turning her streaming eyes on the judge, "She did not mean what she said."

CHAPTER XXVI.

COLLINS went back to her place sobbing loudly, and those in court saw that Jean put out her hand and took the maid's again, as if to show her that she was not angry with her for speaking the truth.

There was a slight pause here, the counsel consulted their notes, the jury spoke together in undertones, the audience exchanged remarks: Jean's head sank wearily on the friendly shoulder near her, and her eyes closed.

"You are not faint, Miss Jean?" whispered Collins, offering her a vinaigrette; but the answer was a shake of the head and a little smile.

After the pause the name Emily Brett was called, and the housekeeper entered the witness box, while a murmur of admiration ran through the spectators at her wondrous beauty.

She was dressed in deep mourning, and as she threw back her veil the marvellous beauty of her face was framed in the heavy crape, while the dark, close-fitting dress showed off the queenly perfection of her matchless figure. Her face was flushed, and her eyes glittering with a suppressed excitement, her red lips so firmly closed that they seemed but a line of scarlet; she looked fiercely, grandly beautiful, but it was an evil beauty, and once her eyes turned on the bowed head of the young mistress of Blair Gates, at the pure, pale face on Collin's shoulder, with a flash of exultation in their depths, at which those who noticed wondered.

"You are the housekeeper at Blair Gates?" said Mr. Donaldson

"Yes," said the calm, rich voice, coolly.

"You were in Mr. Blair's service before his marriage?"

"Yes, I was in his service in Australia."

"You remember his return to Blair Gates with his wife?"

"Certainly."

"Were you surprised?"

"No."

"You were prepared?"

"Yes, Mr. Blair had written to me, besides, the house had been prepared for a mistress."

"Did Mrs. Blair appear a happy bride?"

"Happy!" a slight sneer crossed the woman's beautiful face. "Anything but that."

"Unhappy?"

"Most miserable."

"You were, I suppose, never present at any little differences between her and Mr. Blair?"

"No, I was only the housekeeper."

Oh! the bitterness of her voice as she uttered the words!

"But you were aware they did not live happily?"

"Of course I was—we all knew it."

"Did you know the circumstances of the marriage?"

"Partly."

"Who had told you of them?"

"Mr. Blair. He told me his wife hated him, because he had married her by a fraud."

A murmur of surprise, and some indignation, went round the court. Jean lifted her head; bitterly as he had injured her, she shuddered as she heard the dead man so harshly spoken of.

"Have you ever heard Mrs. Blair say bitter things to her husband?"

"And of him? Yes, on several occasions."

"Which was the first?"

"One day in December they were at breakfast. I went into the dining-room, and I heard Mrs. Blair say, that not only did she not love her husband, but that she hated him, and that she would rejoice if she saw him dead at her feet, and"—she paused a moment as if to give strength to her concluding words—"that she would kill him if she could."

There was a sensation among the spectators at the words; one or two watched the speaker narrowly. The prisoner turned, lifting her eyes to the beautiful, vindictive face.

"How she hates her!" was the thought of more than one present in the court at that moment. "With what a bitter hatred!"

"On another occasion?"

"She said she hated him with the bitterest hatred!"

"And again?"

"Bransby the butler, has already told you."

"Yes, I remember; the discussion on New-Year's night was occasioned by Mrs. Blair's refusal to go to the ball at Sholto?"

"Yes."

"It was a very noisy one; both were excited?"

"Very much excited."

"Did Mr. Blair go to the ball alone?"

"Yes."

"Mrs. Blair stayed at home?"

"Yes."

"Will you tell us what passed that night, Mrs. Brett?"

"Very soon after Mr. Blair had left, Mrs. Blair came downstairs, and went into the laboratory."

"You saw her going in?"

"Yes."

"Did she say anything to account for her presence?"

"Yes. She said she was faint, and was getting something to take away the faintness."

"Did she appear ill?"

"She was very pale when she entered."

"Did she stay long?"

"A few minutes only; she came out almost immediately."

"What did she do then?"

"She went straight to her room."

"Did you see her again?"

"Not till the next day."

"When was Mr. Blair taken ill?"

"The next morning at breakfast."

"What did he drink at breakfast?"

"He drank tea."

"And Mrs. Blair?"

"Coffee."

"Who made Mr. Blair's tea?"

"Mrs. Blair. There was an urn on the table."

"Was the tea which remained from breakfast thrown away?"

"I suppose so."

"Did the doctor's examine the teapot?"

"No it had been washed."

"Did Mrs. Blair seem annoyed at your sending for Dr. Mackenzie?"

"Extremely so."

"Do you think Mr Blair died in the belief that Mrs. Blair had poisoned him?"

Objection to this question by the counsel for the defence, and the judge told the witness that she must not answer it, as that was a very usual thing for Mrs. Blair to go into the laboratory. She suffered from headache and attacks of faintness, and sometimes she went in for drugs for the servants. She also admitted that Mrs. Blair's annoyance was not at her having sent for medical aid, but because Dr. Mackenzie had been sent for. She said Mr Powle was the abler man.

It was then proved that arsenic had been found in Mrs. Blair's dressing-case when her effects had been examined, and with this the case for the prosecution closed.

CHAPTER XXVII.

The case for the prosecution closed amid a profound silence; people felt that things were going against poor Jean; that the evidence against her was strong. Very pale and grave grew the faces of her friends—Lord Ivor's terribly sad and haggard, though he tried to smile at Jean when she glanced toward him.

The judge's face was very grave as he consulted his notes. He was an elderly man, with a mild, benevolent countenance, and he had a fair young daughter at home, which may have led him to pity the unhappy prisoner. The lawyers looked impassive as usual. Sir David's face had not changed; but calmest of all there—calm with a terrible, awful calm, the calm of one stunned into utter hopelessness—was the accused herself! She sat, white and still, with her hands clasped tightly in her lap, and her eyes fixed with a staring, sightless look of intolerable pain, straight before her.

A new dread sprang into Lord Ivor's heart as he watched her. Would her brain give way under this dreadful pressure? Better tears, better any agony of despair, than this awful stillness—this strange and startling unconsciousness to outer things!

"It will kill her," thought Lord Sholto, with a groan, as he looked at the livid face from which all youth seemed to have died.

There were but few witnesses for her, and these were chiefly from among the servants of her household and her personal friends, who spoke mainly in praise of Jean's generosity and unselfishness of disposition; the extreme kindliness of nature; the tender, loving heart which no sooner saw suffering than it longed to relieve it; the sensitive feeling which never cared to wound; the patience with which she had accepted the heavy trouble which had come into her young life, and the tenderness with which she treated her husband in his first symptoms of suffering, which a servant, crossing the lawn in front of the dining-room windows, had seen.

That was all, and it was terribly little wherewith to refute the charge against her—with which to crush the evidence which had been brought forward to prove her guilt. Terribly little! those who loved her felt it so, and their hearts sank heavy as lead; and the Earl of Ivor, lifting his hand, shaded his face with his fingers.

The court was very still when Sir David Cairnes rose to address the jury; not only was the interest in the trial very great, but Sir David's reputation, the eloquence for which he was renowned, stirred every pulse with excitement, as his rich, deep voice—rich and deep, but clear as a bell—rose in the crowded building, thrilling every heart, as a clarion-roll thrills the soldier's heart.

He spoke as only those speak who have been long trained to speak in public; who have mastered all the difficulties of oratory; who have studied its science from their youth upwards. He spoke eloquently, as one who knows and feels the subject of his discourse, with the polish of practised power joined to natural talent. There was a breathless silence when he spoke, the clear, deep voice penetrating, without effort, to the farthest limits of the listening throng, and as he spoke the feeling of the crowd changed as he swayed them with his matchless oratory.

He spoke of Jean's position, her gentleness, her tenderness; of the education which made the crime imputed to her almost a ludicrous charge.

"Is it likely—ask yourselves the question—is it likely that any girl—a young girl gently born and tenderly nurtured—should fall so low? Ask yourselves whether she, whose gentle heart and kindly feelings were proverbial among her friends, should put her husband to such cruel torture? Granted her marriage was an unhappy one; granted she longed for her freedom; are there no other ways but death to obtain freedom from such bondage as hers? If her chains galled her she could have rid herself from them at less cost than his life. But this also her education forbade; she was too pure to take these means; too gentle, too good, to take those of which she is accused; but if she turned from the lesser sin, is it likely that she succumbed to the greater?

"We have heard the account of her husband's dying hours. That he died from poison there is, unhappily, no doubt; but to think that his wife administered that poison is a monstrous, a palpable invention. We have been told that he shrank from her; but I tell you, that when he sent for her, the message given to the housekeeper—the principal witness against the accused—was not given. I tell you that when, at last, in defiance of a supposed command from her husband to keep from his presence, she entered his room, he received her with a gently-uttered reproach, and even appealed to her to defend him from the instances of those who were trying to induce him to take some restorative. 'Tell them to leave me alone, Jean,' he said, pleadingly; and when she bent over him with the mixture, he allowed her—his wife—to prevail, and took it from her hand. If she cried out at the word 'poison,' it was but natural, gentlemen of the jury, for she is young, and impressionable, and she saw her husband dying of some strange, mysterious, sudden illness. If he turned against her at the end, it was because one at his bedside insinuated that the word 'poison' had unduly disturbed his wife. We have heard she pleaded with him to let her send for further advice, but it was useless; and it is not surprising that she should shrink from seeing the suffering, the death-agony of a man to whom she was bound by no tie of love. The horror at the inquest is also a natural one, for you and I, gentlemen of the jury, would have felt it also.

"And now I must touch on one point which must have appeared strange—the presence of arsenic in her dressing-case. In order to account for it, I must probe a wound which is still raw; but if I give my client pain, she will pardon me—it is in her interest. The housekeeper has told us how, on New Year's night, there was a discussion between the husband and wife because she refused to go to a ball at Sholto Hall, and that when her husband left Mrs. Blair came down to the laboratory. It is quite correct; Mrs. Blair refused to attend the ball at Sholto Hall because she wished to keep true to the husband whom she did not love, by avoiding the presence of the man she loved, and who loved her; and when her husband taunted her with this fact, she was desperate; she was trying to do right, and he, in his ignorance or folly, was trying to force her to do wrong.

"When he had left her, stung to the heart by his angry words, she had gone to her room in silence. She had pictured to herself a long life—she is young, there is a long life before her—and she had recoiled from such an existence with a sickening shudder, as the bravest man or woman would shrink from the approach of a long and terrible bodily suffering; and for a moment the thought crossed her 'Why meet it? Why live in unhappiness, when the blessed silence of the tomb might be hers? Why support existence when it was burdensome? when every breath was pain?'

"The means of escape were near at hand. She had free access to the room where Mr. Blair kept the drugs which he used sometimes in chemical experiments, and the medicines which are indispensable in a country house at some distance from medical aid. Why not make use of some of the deadly drugs there and so win peace? Remember, she is a woman, desperate with suffering, and death allured her with a terrible power. All that made life worth living for was dead to her—the body only was left to perish; all hope had already died with all happiness.

"She went into the laboratory, and took from among the drugs sufficient—ay, and more than sufficient—arsenic to obtain the repose she craved, and went back to her room with a terrible resolution. She would set herself free. Far behind her—gone for ever—was a past which had for many years been one long cloudless sunshine; before her lay a future which looked unutterably gloomy and drear.

"The temptation was terrible, but she fought against it desperately. She remembered its sin—its terrible guilt—and she prayed, with a passion and earnestness which she had never felt before, for strength to conquer and to endure.—To be continued.

THE BIBLE WAS NOT ATTACKED.

An honored correspondent, one whose good opinion we highly esteem, has written us as follows, and thinking, perhaps, other readers may have misinterpreted the article in question we publish both his complaint and our explanation:

"Permit me a piece of criticism; I was very sorry to find in the RURAL of Nov. 8, that extract from the Atlantic Monthly. It was the first time I have seen anything in its columns that I was not willing my six children should read. I would not for the world have their faith in the Bible undermined as a matter for their good in *this life*, to say nothing of the life *hereafter*, and in my opinion the ruin of this nation is *sure* whenever the majority of its people become disbelievers in Divine Revelation. No other power than belief in the truths of the Bible will restrain the tendencies to vice and crime. M. B. B.

Prof. Goldwin Smith does not affirm anything against the Bible; he merely states, what is the fact, that, to a large and increasing number of people, the Bible is not the sacred book it once was. He deplores most heartily that religion is losing its hold on the masses of the people, and prognosticates dire evils as the result of the prevailing lack of interest in things spiritual. No one would be more astonished than Professor Smith himself to know that what he intended as a note of warning should have been construed into an attack on religion.

The Christian Union of November 19 says of this same article: "Professor Smith argues with great force and abundant wealth of historical illustration that the decadence of faith has always been followed by an interregnum of morality. He assumes that the present age is one of decadence of faith; and he summons from contemporaneous history some very significant facts to show that there is already in England the beginning of an interregnum of morality. *The article itself is well worthy the thoughtful study of ministers and teachers and parents.*" The italics are ours. We quote from our religious contemporary only to show that others beside ourselves considered the article worthy of the serious attention of the best classes in the community.—[EDS.

THE HOLIDAY SHIPPING GUIDE, which has just been published by Mr. F. Leypoldt, 15 Park Row, New York, is intended as a convenient pocket directory for Holiday shopping in the Retail Center of New York City. It is intended chiefly for the ladies, and will save them much time, anxiety, and fatigue during the rush of Christmas shopping.

It aims especially to answer the questions which so often perplex the shopper: What can I get? Where can I find it? What other stores have it? Which is the nearest? What stores are on my way? Where shall I stop? What for? Where is such and such a store? What car, etc., takes me nearest? Where is the nearest Druggist, Lunch Place, Telegraph and Messenger Office? Etc., etc.

This little book, in neat paper covers, sells for ten cents, and can be found at any bookstore or news-stand. We can recommend it to our readers as a practical and handy shopping guide.

For Women.

CONDUCTED BY MISS FAITH RIPLEY.

IT WAS A DREAM.

It was a dream—
As a lily fair
Bends o'er the placid waters low,
My couch she bent above.
Her eyes
Seemed heaven's self—so pure, so true!
Her dewy lips in cadence rare,
Lisped "Darling, O, I love but you!"

I had bowed to the spell of the tender voice so oft',
To-night within me welled,
In ecstacy, my inmost soul;
Her face touched mine—
Could I refrain?
In silent bliss I hugged and kissed—
My brain grew wild my nose quite *flat!*
Heavens! It was my *old Tom cat!*

[*Charlie A. Fischer.*

A MOTHERLY LETTER.

DEAR MISS RIPLEY:—Reading the excellent letter of Mrs. Griffith—RURAL, Nov. 29—in regard to children, I would say that she very forcibly describes a good many things that come under one's daily observation. I echoed the remark when my baby was born, that I was "glad he was a boy;" not but that I love girls, but because, looking down the dim vista of years, I see more chance for a man than a woman. Take, for example, a young man and woman of average age starting out in life, if the girl makes the slightest *faux pas* even though it be but once, and she tries to redeem herself, how will she prosper? All respectable people, especially our own sex, will give her the cold shoulder and treat her with contempt. Let the young man, however, go from bad to worse, and be sunk in the depths of immorality and drunkenness; let him, I say, resolve to "straighten up," and what is the consequence? Why, in a few years he is tolerated in the best society, and "swings around the circle" as if to the manor born. I heard it urged once that a reformed man made the best husband; it may be so, but God forbid my girl should mate with such—and why not apply this argument to women? then such sad cases as that of "The Unfortunate," described in the New York Sun, could or would never have taken place. The different latitude granted to the sexes has always been an enigma to me, but while time endures I suppose it will remain the same.

I fully endorse what your correspondent wrote in regard to frequent bathing, particularly in the case of infants. After a new-born babe has been washed and tormented to the utmost by a nurse, then the little helpless creature is only allowed 24 hours' rest, when it is put through the same performance again. I fail to see why a baby, after its first washing, should require so much cleansing. The idea, especially in cold weather, of bathing an infant all over every morning, is, to my mind, actual cruelty. I bathe my boy once a week all over, and every day wash his face, neck, hands, etc., but I fear he would not be alive now if I had followed the daily bathing plan. When my baby was born, from some unaccountable cause he was a "living skeleton," didn't weigh over four or five pounds. I never saw anything alive so poor. The women all shook their heads and said he couldn't live. I was afraid so myself, but I thought I would do my best and trust to my Heavenly Father for success. The child has often laid in my lap, looking just like a dead child. Many are the tears I shed over his little sleeping form. I knew the usual style of dressing would not suit him. I abandoned linen shirts, put on flannel, and then laid away all his dresses and replaced them by flannel gowns, so that now he is in flannel from head to foot. For nearly two months after his birth he did not gain a pound, but after adopting flannel I commenced to see the difference; he has kept on improving and is now growing fat and hearty, and bids fair to become a man some day.

The reason why I have occupied so much time on this subject is that there may be other mothers with delicate babes, who might profit by my experience. I never give my babies anything but catnip tea, peppermint, etc. If they have the colic badly, "just reverse the polez," that is, take them by the long clothes and turn them head downward for a moment, and it will help them almost instantly. Don't be afraid to do it, it won't hurt them; at least, it never injured mine, and I have seen my mother do it to my sister's boy when he was making the welkin ring with his protestations against the "twisters."

We have had a delightful Indian summer, and to-day—the 3d of December—it is almost warm enough to be without fire. I like this Kansas climate; the only thing that I have any serious objection to is the wind, that hardly ever rests—it blows soft or hard continually. We have good soil and good crops, so that Kansas is a good State to live in, if one is willing to work. I would say more, but my letter, I am afraid, is already too long. So adieu for the present, till we meet again.

Waterville, Kas. MRS. M. GALPIN.

HOW CAN MOTHERS FIGHT TOBACCO SUCCESSFULLY?

BY MARGUERITE.

I AM a mother and have a son almost three years old. Doubtless, many will think me premature on the tobacco question; so far as we are concerned, when I ask the above, but I scorn the weed, despise the habit, and think that few attain a perfected manhood who use it—none, if they commence early in life. Think of the money worse than wasted which might be used to ennoble the immortal part of man! Think of the homes bearing the impress of poverty, and of the wives and children who suffer for the common comforts of body and soul while a daily liberal allowance is made by the husband and father for his usual tobacco supplies.

When Fred was an infant I stepped to the outer door of my husband's place of business one evening and found about a dozen boys on the platform who were hardly in their teens and each one was smoking as intently as if the fate of the nation depended on his doing his very best.

"Not every one smoking I hope," I exclaimed.

"Yes" said one between puffs. "Just what your boy will be doing some day."

"Never if I live," I said emphatically and I hope I spoke truly.

"Oh well," remarked another, "my mother did not intend that I should, but I commenced it for the toothache and when that was cured I could not stop."

(Query. I wonder why tobacco is so good for boys' toothache? I never hear it prescribed for girls.)

A gentleman dined with us this week and I inquired after the baby.

"Oh he is a fine little fellow, and generally well, but just now he is troubled with worms. Wife had asked me to get medicine for him when I was down street but neglected it, and last night an old man staid with us who smoked an old strong pipe. During the evening baby got hold of it and blew through it and sucked at it for a long time. Wife interferred but the old man said to leave him alone, "it was good medicine," and that he would be well in the morning and he is.

"I would have interferred too," I said.

"So would I," said my husband. "He will acquire a taste for it soon enough."

"If my boy wants tobacco he can have it," said our visitor. "I'll never oppose him."

"I will mine," said I.

"It is of no use, Mrs. Lee," he said. "My father told me that if I ever used it he would whip me, even if I was as big as Joe Stevens, and he measured six feet five inches in his stockings. When he told me we were sawing logs together, and I had a quid of tobacco in my mouth then, and I had been using it for two years. I was neat about it though and kept the corners of my mouth clean, and never spit upon the floor as some of the neighbors' boys did."

"How long before he found you out?" was asked.

"Never, until I had been in the army for some time, and then he wrote me that he had sent a box to my brother, and was going to send one to me, and if there was anything I wanted particularly to let him know. I wrote back, 'for heaven's sake, to put in a pound of good chewing tobacco,' and when I opened the box it was there!"

This father lived in far away Vermont. After the war the son settled in Pennsylvania, married but did not visit his early home until the Centennial year, and when he did so, he was accompanied by his wife and two daughters, and—his naughty habit. I would like to chronicle for my own satisfaction and the good of my readers, that his father whipped him soundly, but cannot state facts. He arrived home in the night and the dear old father doubted that it was Ogden, until he said, "My wife and children are in a carriage outside, tired almost to death." And then the dear aged parents hastily opened their arms, hearts and homes to them all. Now, I want to be more successful in bringing up my boy than Ogden's father was with his. There is not a drop of tobacco taint in his veins for several generations, and now as I write, he climbs up to love and kiss me, bothering me all he can. I earnestly desire that his life may be as pure and his breath as sweet twenty years from now, as it is at present. How can I accomplish this? Who can tell?

CHEMILOONS.

ABOUT a year ago, I read in this department a short article in favor of a merino waist instead of the chemise, for ladies underwear. I thought the idea very sensible, and only differed with the writer in regard to chemiloons. She did not like them, but I hope no one will be deterred from trying them on that account. Having worn them for four years, I have no wish to change for any other style of garment. One advantage is in having one garment to make, wash, iron and mend, instead of two, which, in the present rather elaborate state of woman's wardrobe, seems quite desirable. Probably the best thing to be said for it is, that its weight is supported by the shoulders, as indeed, the weight of all clothing, especially for woman, should be.

Physicians agree that not a feather's weight should be suspended from the hips. In these degenerate days, when the race grows weaker more perceptibly than wiser, too much attention can scarcely be given to straps and strings and buttons, as related to the proper physical development of girls. How many mothers attend to this, and to the corset question? They control their girls on all other subjects, it may be, but they rather like to see them look trim, like other girls, as they gently remonstrate against abuses worse than Chinese damsels inflict on themselves, but they do not stop them. Will women with weak backs and ribs pressed together over lungs and heart and stomach, be likely to produce a race of robust men? The idea of tampering with the form God made and "bringing it into shape!" And this shapelessness does not even look better to the least artistic eye. It looks better to the slave of fashion as do the nose-rings to the Hottentot, and the tiny pointed shoe to the Celestial. But I have wandered from my subject.

OLD MAIDS.

A SENSIBLE writer expresses his opinion of old maids in the following manner: "I am inclined to think that many of the satirical aspersions cast upon old maids tell more to their credit than is generally imagined. Is a young woman remarkably neat in her person? 'She will certainly be an old maid.' Is she perfectly reserved towards the other sex? 'She has all the squeamishness of an old maid.' Is she frugal in her expenses and exact in her domestic concerns? She is cut out for an old maid. If she is kindly, humane to the animals about her, nothing can save her from the appellation of an old maid. In short, I have always found that neatness, modesty, economy and humanity, are the never-failing characteristics of that terrible creature—the old maid.

It is no doubt a terrible thing to be an old maid, but so long as men drink rum, chew tobacco, smoke cigars, and act like fools, and even worse, it is not the worst thing that can happen to a woman. Indeed, we should not have to hunt very far to find plenty of women who are not old maids but who would give all their boots and shoes if they were: and who in bitterness and sorrow lament the day when they suffered a yoke to be placed upon their necks, which is grievous and hard to be borne. Marriage is honorable in all, but if it is honorable it should be honored, and those who make it a burden and a calamity, need not wonder that intelligent and considerate women fear to take the risks it involves.

MATTHEW'S HAND SEED DRILL.

Every nurseryman, gardener and amateur horticulturist, knows how valuable and time-saving machine a good seed-drill is in the spring, when work is pressing. Nobody who raises vegetables for the market can, from a labor-saving point of view,

afford to do without one or more seed-drills.

The Matthew's drill is one of the best in the market. We offer it as a premium to any one who will send us a club of 28 subscribers, and never was there a better time to get up a club than just now, during the holidays, when work is slack and friends are visiting and plans are laid for the coming spring. This drill will open a furrow, drop seed accurately at the desired depth, cover it, roll it lightly, and at the same time mark the next row. It sows with an evenness and rapidity impossible for the most skillful hands to do, and can be adjusted to sow any variety of garden seeds, from the size of peas to that of catnip seed. The drill is complete in all its arrangements, and very durable.

THE FIRE-FLY HAND HOE

is another implement that is becoming very popular in the gardens. It is premium No. 65 of our premium list, and we offer it for a club of five subscribers. It has been recently introduced by S. L. Allen & Co., Philadelphia, and everywhere it meets with approval. Its construction and mode of working are seen in the cut.

Do a Clever Thing

for your wife. She does many for you—bakes, cooks, scrubs and mends. Her work is never done. Get from your grocer a package of Gilt-Edge Butter Maker for twenty-five cents. She can churn in half the time, get ten per cent. more butter and of a color that she will be proud of. The valuable book, "Hints to Butter-Makers," is given away by all store-keepers.

NOVA POST-OFFICE, Ashland Co. Ohio, May 28, 1879.

BUTTER IMPROVEMENT CO.:

Gentlemen—My attention was called by your correspondent of Elyria, Mr. Boynton, to your Gilt-Edge Butter Maker, and wished me to give it a trial. We churned one gallon of cream according to your directions in your letter to Mr. Boynton, with the following result, time of churning 12 minutes, produced 3¼ lbs., color good and quality far better than any thing that I have tried previously. I have been engaged in the dairy business more or less for the last 15 years. Also took of the same cream, the same time and from the same bulk, omitting your powder, as per directions with the following result, time of churning 20 minutes, three pounds, quality inferior, short of what is required in our market. I would further say, I made a second trial with about the same result.

Truly Yours, C. S. VAN AMANN.

In **1850** the "BRONCHIAL TROCHES" were introduced, and from that time up to the present their success in Colds, Coughs, Asthma and Bronchitis has been unparalleled. No household should be without "*Brown's Bronchial Troches*," as by their early use most troubles of the Throat induced by cold can be overcome.

Why let ladies and children run their shoe heels over? Prevent it by using Lyon's Heel Stiffeners.

"That medicine goes right to the spot, refreshes, revives and cures."—A patient on Hop Bitters.

News of the Week.

Congress adjourned last Friday for the holidays, having accomplished little. On last Friday week the House passed the Fortifications and the Pensions Appropriation Bills, the latter calling for $32,404,000. During the week Mr. Warner has asked for information as to what came of the bimetallic mission to the governments of Europe, for which $20,000 was appropriated; and Mr. Morrill for the effect on the revenue of the repeal of the duties on tea and coffee. Resolutions have been introduced expressing sympathy with the Irish Nationalists in their effort for equal laws and self-government, and the hope that they may soon become owners of the soil they cultivate; and equally buncombe speeches have been made over petitions for enriching the soldiers and sailors of the civil war by the difference between the gold value of the greenbacks in which they were paid and their nominal value. This impudent proposition of course comes from the demagogues who denounced as ruinous the measure which was to remove the discount on greenbacks.

New Orleans, Dec. 21—Major George W. Carey, late of the firm of Richardson & Carey, a large dry goods house, who was indicted a few days ago for embezzlement and forgery, was brought here from Mobile to-day on a requisition from Gov. Nicholls, and remanded in default of a bond of $10,000. The Chamber of Deputies at Rome has passed a bill authorizing the Government to take immediate steps for the prosecution of the public works in order to relieve the distress of the working classes by furnishing them with employment. A correspondent at Pesth says telegrams from Sophia state that 60 Mohammedan refugees whom the Bulgarian Government had refused to admit to their former homes, have died of cold and starvation in the open fields.

A Cairo correspondent states that Gordon Pasha has been recalled. . . A Vienna dispatch reports that the Montenegrin representative in Constantinople has demanded his recall in consequence of the difficulty of his position in regard to the Gul-

singe question' . . A Vienna correspondent says the Austrian Army bill was passed from patriotic motives, but its passage must not be regarded as a vote of confidence in the Ministry.

A Calcutta dispatch says executions continue in the Palace at Mandelay, Five Princesses were recently murdered. The Burmese Embassy is still at Thyetmyo. . . A Berlin dispatch says the famine in Silesia is gradually increasing. . . Special dispatches from Madrid state that there have been several riotous street demonstrations during the past week. After the funeral of Gen: Lagunero, a riot occurred between a mob and the police, in which shots were fired. Seventeen porsons were arrested.

The Markets.

Late advices from nearly all over the country go to prove that an unusually large increase of acreage has this year been planted to wheat. With a fair season the increase of yield next year would be very great, even from the normal increase of area under this cereal. Since 1850, according to the best accounts, the wheat yield has increased as follows:

1850	100,485,994 bushels.
1860	173,104,124 "
1860	235,884,700 "
1876	289,356,500 "
1877	364,194,146 "
1878	420,122,400 "
1879	448,000,000 "

It will be noticed that the yield has nearly doubled in the last nine years, and will doubtless have more than doubled within the decade. Great as has been the increase in the population of this country, the increase in the yield of what has been much larger, so that every year we have a larger surplus for export. Previous to 1872 our greatest crops gave only about five bushels per head, whereas last year's harvest afforded 8¾ bushels. It is estimated that 35 per cent. of the wheat grown here is exported, of which Great Britain takes about half. Where shall we get a paying market ten years hence at our late rate of increase?

Index has cut things short here, too.

SPECIALS FROM ALL CENTERS.
Until Saturday, Dec. 20.

Baltimore.—WHEAT—Southern red at $1.40@$1.55; do. amber at $1.50@$1.67; No. 1 Maryland at $1.56½; No. 2 Western winter red, spot at $1.53¾; December at $1 53½@$1.53¾; January $1.55½@$1.55¾; February at $1.59½@$1.59¾. CORN—Inferior to prime white at 56@65c.; do. yellow at 59@60c.; Western mixed, spot and December, old, 64c.; new, 60½c. OATS—Southern at 47@48c.; Western white at 47@48c.; mixed at 45@46½c.; Pennsylvania at 47@48c. RYE—Quiet at $1.00. HAY—Unchanged. BUTTER—Prime to choice Western packed at 22@23c.; roll at 20@24c. EGGS—Fresh at 22c.; limed at 16@18c. COTTON—Middling, 12½c.; low middling, 12¼c.; good ordinary, 12c.

Boston.—CORN.—Sales at 65@67c. for old; 62@64c. for new. OATS.—Sales of No 1 and extra white at 52@54c; No. 2 white at 50@50½c; No. 3 white and No. 2 mixed at 48@49c. RYE nominally 95c@$1. Shorts selling at $18; fine feed at $18@18.50; middlings, $19@20. COTTON.—Middling 12¾c; low middling 12⅜; good ordinary 12c.

Buffalo.—WHEAT. No. 1 hard Duluth at $1.40; buyers and sellers generally apart. CORN.—New No. 2 mixed Western at 61c. OATS.—No 2. Western quoted at 45c; State retailing at 48@49c. BARLEY. Canada quoted at 70@85c; State at 65@75c; No. 2. Western at 85@90c. RYE.—Holders asking 90c. for No. 1 Milwaukee.

Chicago.—WHEAT—No. 2 red winter, $1.33; No. 2 Chicago spring at $1.31¾ cash; $1.31¾@$1.31¾ January; $1.33½@$1.33¾ February; No. 3 do at $1.14¾; rejected at 98c. CORN—40½@40¾c. cash; 40½c. January; 41c. February; 46¾c. May; rejected, 38¾c. OATS—34¾c. cash; 35c. bid January; 35¼c. February; 40c. May. RYE—Stronger at 79@80c. BARLEY—Firmer at 87@88c. EGGS—17@20c. HOGS—Light, $4.15@4.25; choice to heavy $4.30@4.60; mixed packing, $4.00@4.30. CATTLE—Shipping. $3.60@$5.12½; butchers, $2.00@$3.50; feeders and stockers, $2.40@$3.60. SHEEP—$2.90@$4.50.

Cincinnati.—WHEAT stronger at 1.34@1.36. CORN dull at 41@43½c. OATS steady at 40@41c. RYE firm at 93. BARLEY dull at 90c. BUTTER active firm and higher; choice Western Reserve at 24@26c; prime do., 20@22c; prime to choice Central Ohio at 19@20c. HOGS active, common at $3.65@4; light at $4@4.25; packing at $4.25@4.45 butchers' at $4 45@4.50; receipts, 3,000 head; shipments, 600.

Detroit, Dec. 26.—WHEAT stronger; extra white Michigan, no sales; No. 1 white Michigan at $1.37½; December at $1.37½; January at $1.38¾; February at $1 42¾; March at $1 45; No. 1 milling at $1 53¾; No. 1 amber Michigan at $1.37½; No. 2 Red Michigan at $1 37½. CORN quiet but steady; No. 1 yellow at 42½c.; high mixed, 48¾.; No. 1 mixed, 48c.; No. 2 mixed at 46c. OATS scarce and strong; No. 1 white at 41c.; No. 2 white at 39c.; No. 1 mixed at 39½c.; No. 2 mixed at 38c. CLOVER seed steady and in fair demand; prime at $5.10@$5.15; choice at $5 45. Dressed hogs firmer, with a very active inquiry at $5.25.

Indianapolis.—WHEAT firm; No. 2 red at $1.34@$1.36. CORN firm at 40½@40¾c. OATS steady at 38@40c. Hogs quiet at $4@4.35.

Louisville.—WHEAT firm at $1,30@1.32. CORN steady, with a fair demand; white at 46c.; mixed at 45c. OATS firm; white, 43c.; mixed at 41c. RYE steady at 91c. COTTON, middling 12c.

Milwaukee, Dec. 20.—WHEAT, No. 1 Milwaukee hard at $1 31¾; do. soft at $1 30¾; No. 2 Milwaukee at $1 29¾ spot and December; $1 30¾ January; $1 32¾ February; No. 3 do. at $1 15¾; No. 4. do. at $1 08; rejected at 99c. CORN stronger; No. 2 at 40½c. OATS ½c. firm; No. 2, 35@35½c. RYE steady; No. 1 at 78½c. BARLEY stronger; No. 2 spring, 74c. cash; 75¼ February.

New Orleans.—CORN scarce and firm at 58c. OATS in active demand at 48c. CORN meal quiet but firm at $2 55. HAY firm; prime at $24; choice at $26. SUGAR active, firm and higher; inferior at 4¾@5¼; common to good common at 5@6¾c.; fair to fully fair at 6¾@7c.; prime to choice, 7¼@7¾c.; yellow clarified, 7¾@8¾c. MOLASSES steady with a good demand; common at 25@27c.; centrifugal at 25@33c.; fair at 30@32c.; prime to choice at 33@40c. RICE dull and nominal: Louisiana, ordinary to choice at 6¾@7¼c. BRAN dull; quoted at 77½c. COTTON dull and easier; middling, 11¾c.; low middling, 11¼c.; good ordinary, 11¼c.; net receipts, 9,814 bales; gross, 11,271; exports to Great Britain, 8,910; to the Continent, 1,905; sales, 3,000; stock, 290,720.

Philadelphia.—WHEAT.—Western rejected at $1.47¼; Southern red on trackat $1 52; Delaware amber on track at $1 54; No. 2 red in elevator at $1 53¾ RYE quiet; Pennsylvania at 98c. Corn.—Old Pennsylvania and Southern red on track and in grain depot at 60@63c. OATS.—Western mixed at 47@48c; stained at 48½c. fair and choice white at 49@50c. BUTTER.—Creamery extra at 32@34c. Bradford county and New York extra at 28@29c; Western Reserve extra at 23@25c; do. good to choice at 17@21c; rolls dull; Pennsylvania extra at 18@21c. EGGS.—Pennsylvania at 24c; western at 20@22c. CHEESE.—New York factory at 13@13½c; Western full cream at 12½c; do. good at 11@12c; do. skims at 7@9c. BRAN at $17 50@18 50. COTTON.—Middling 12¾; low middling 12⅜c; good ordinary 12¼c.

St. Louis.—WHEAT—Higher, but slow; No. 2 red fall at $1.34½@$1.34¾, cash; $1.36½@$1.36¾ January; $1.41@$1.41¾ February; No. 3 do., $1.25¾. CORN—Dull at 36¾@36¾c. cash; 36⅝@36¾c. January; 43¾@43¾c. May. OATS—Dull at 36¾c. cash; RYE—Firmer at 81½c. BARLEY—Quiet and unchanged. HOGS—Active and a shade higher; light shipping at $4@4.10; packing at $4.10@4 30; butchers' to select at $4.30@4.40; receipts, 3,500; shipments, 1,600. CATTLE—Firm; supply entirely inadequate; choice to heavy fancy steers at $4 70@$4.90; good to prime at $4.25@$4.65; light at $3.50@4.00; cows and heifers at $2.50@$3.75; feeders at $3 25@$3.75. SHEEP—Firm and unchanged; fair to fancy at $3.25@$4 00; receipts, 400; shipments, 150.

Toledo.—WHEAT—Amber Michigan at $1.40; No 2 red winter, spot, at $1.41¾; December at $1.42; January at $1.42¾; February at $1.46; March at $1.48¾; April at $1.51¾; No 3 red Wabash at $1.29; No. 2 red Dayton and Michigan at $1.39; rejected at $1.07; Western amber at $1.43¾; No. 2 red mixed at $1.38. CORN quiet; high mixed at 44¼c.; No. 2 at 43¾c.; rejected at 43¾c. OATS quiet; No. 2 at 40¾c.; Michigan at 42¾c. SEEDS—Clover at $4.90. Dressed hogs at $5.15.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Dec. 20, 1879

BEANS AND PEAS.—The principal sorts of beans are in large supply, and prices again feel the weight of them in the absence of proportionate demand. Outside rates are extreme for all grades Green peas hold prices by some export call; $1.80@$1.85; field peas not quoted; E. E. peas $2.25@2.30 for 2 bu bag; Marrow beans, $1.10@1.65 medium, $1.35@1.55; pea, $1 50@1.80; white kidney, $1.75@2; red do., prime, $1.80@1 90; poor, $1.70@1.75; black, (or turtle soup) $1.90.

Receipts of beans for week, 14,775 oush.; exports, 1,775 pkgs do., and 200 bbls. green peas.

BEESWAX.—A small business is in progress at 24½@25½.

BROOM CORN.—Offerings are small and business limited. Jobbing sales of green stalk braid at 5½@6¾c.; green hurl at 7@8c.; red and mixed at 4@5c.; fancy brush corn at 9c.

BUTTER.—Sales were only of a moderate volume, but receipts of either State or Western are not of depressing bulk and sellers have not changed prices to any quotable degree. Exports are again fair, and as this outlet is for sound, useful, but not top-notch grades, the latter will not lose strength by having a more concentrated position. The market will rule dull for a week or so, as Christmas time always curtails grocers' wants. Bakery and pastry are large, but prices for under-grades send the trade largely to lard. State pails and tubs, small dairy and fresh ends, 27@29c.; best lines, 26@27c.; fair to good, 21@25c.; firkin and tub single dairies, choice, 26@27c.; do. fair to prime, 22@25c.; do., firkins, alone, 21@24c.; Welsh tubs, 20@24c.; poor State 19@20c.; creamery, finest, 28c.; good to prime, 33@31c.; sweet cream, 33@34c.; poor to good, 23@33c.; Western imitation cream, 23@30c.; dairy, Irish, extra, 24@25c.; poor to good, 18@22c.; factory, late made, 22c.; poor to good, 13@18c.; very poor Western, 10@12c.; rolls, 19@20c.

Receipts for week, 20,000 pkgs.; do., exports, 5 400 do.

CHEESE.—The shipments for the week have been 41,600 boxes. Those have been mainly of good and low grades, with not much of a disposition to buy fancy except on imperative orders, since the temper of the markets abroad does not invite free shipments.

Quotations are for State factory: Fancy, 13@13½c.; good to prime, at 11¾@12¾c; fair to good, at 10¾@11¾c.; half-skimmed at 8@10c.; skimmed at 6@8c. State farm dairy: Fine at 12¾@12¾c.; good to prime 10½@12c.; fair to good at 9@10¾c.; skimmed at 6@8c. Wis. factory: Fine at 12½@12¾c.; good to prime at 11@12½c. Ohio factory: Cheddar, fine, at 12¾@12¾c.; do., fair to good, 10@11c.; flat, fine, 12¾@12¾c.; flat, good to prime, 11½@12½c.; flat, fair to good, 10@11½c.; half-skimmed, 9@10c.; skimmed, 6@8c.

Receipts for the week, 31,700 boxes; exports, 38,000 do.

Liverpool cable quotation, 64s. 6d. Steam to Liverpool, 30s.

COTTON.—The market has been subjected to speculative manipulation and has been feverish and irregular, closing weak at for Dec. 12.52@12.54c.; 13.65@12 67c. for Jan; 12.94@12.96c. for Feb.; 13.20@13.21c. for March; 13.40@13.41c. for April; 13.60@13.61c. for May; 13.75@13.76c. for June; 13.85@13.85c. for July, and 13 92@13.94c. for August.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

DRIED FRUITS.—The trading is confined to small lots, owing to the full incident to the holiday period, with prices, however, generally steady.

Apples—New North Carolina, at 6¾@8¾c. for fair; 10@10½c. for choice; 11@11¾c. for fancy sliced. Patent evaporated apples, choice, in cases, 15@16c.; do. fair to good, 13½@14¼c.; N.Y. State sliced, new, 7½@8¼c.; quarters, choice, 7@8c.; new southern quarters scarce and nominal; new North Carolina peeled peaches at 17@19c., do., Georgia, 13¾@16¾c. Peaches, Delaware evaporated, peeled at 25@28c.; do. unpeeled at 13@14c.; new halves at 8c. Blackberries at 9@10c. for new. Raspberries at 26½@27c. Pitted cherries at 18@19c.

Exports for week, 631 bbls. apples.

EGGS.—Receipts for the week, 5,900 bbls.; do. last week 6,230 do. The demand has taken a favorable start and good qualities are firm. Held lots quoted weaker every time offered, and many of the old ones will soon be unsalable. Near points arrive liberally, and with selected Western and prime Northern the supply meets the demand.

Near points fresh, doz. 25@26c.; State and Pa., 21½@23¼c.; Canadian 18@c.; 19 Western, prime to extra, 22@23c.; off grades, 17@20c.; Southern, 21½@22½c.; State limed, 16@16½c.; Canadian, 15@16c.; Western, 14½@15½c.

FLOUR.—The exports this week reach nearly 100,000 bbls.; this shows a marked improvement in trade. The prices made have varied little Closing dealings are at $5 50@5.80 for inferior to fancy superfine State; $5 90@6.15 for inferior to good extra do., odd lots and lines; $6.15@6.35 for good to very choice do.; $5.25@5.90 for inferior to very fancy superfine Ind., Iowa, Michigan, &c.; (the latter an extreme); $5.90@6.15 for inferior to good shipping extra do., and $6.15@6.25 for good to fancy shipping extra do.; inferior to about choice white wheat extras, $6.10@7.15; choice to fancy do. at $7.25@8.50; red and amber winter wheat, inferior to fancy trade and family, at $6.00@8; round hoop Ohio, $6 60@6.40; and trade and family brands of do. at $6.50@8.00; the latter rate for very choice; St. Louis at $6 10@7.00 for inferior to very good extra; $7 15@8.50 for very good to fancy; Minn. clear, very inferior to fancy, at $5 90@7.10; Minnesota "straight," very inferior to fancy, at $6.50@8.00, and patent poor to very fancy, at $7.00@9.25; unsound stock at from $4.25@6.25; city mill extra at $6.75@7 00 for about fair to choice for West Indies (fancy do. quoted at higher figures); do. for England, $5 90@6.35 for poor to choice; do. trade and family extras, $7.10@8 25; do. for South America, $6.75@7.25; No. 2 at $4.35@$5.25 for very poor to fancy.

CORN MEAL.—Brandywine is quoted at $3.30@3.35 and yellow western at $2.75@3 25.

FRESH FRUITS.—For apples there is the customary holiday demand for fine sorts, and small selections are firm. Lady apples are unusually high. Fair shipping Greenings and Baldwins can be bought about as before.

Spitz, ₱ bbl., $3@3.50; Baldwin, $2.50@2.75; Greenings, $2.25@2.50; winter mixed, prime, $2.25@3.00; poor to fair, $1.50@2. Lady apples, 18@18c. Pears quiet; Winter Nelis, Vicars and Lawrence range at $2 50@4.00 per bbl. Cranberries are quiet, but very firm, as there is no surplus of prime. Cape Cod, fancy, per bbl., $8@8.50; other, Capes and Eastern, $6@8; N. J. crates, $1.75@2.25. Choice Catawba grapes firm; cases, $2@3; do., loose, per lb., 5@7c. Florida oranges in good demand when prime. Choice hf. bbl crates, $3@3.50; fair, $2@2.50. Peanuts active. Va. hand-picked, 5@5½c., and other grades 3¾@4¼c. Hickory nuts, 80c.@$1; B. walnuts, 50c.; Pecans have advanced; 9¾@11c.

GRAIN.—Shippers have not been as free buyers, yet a fair business has been done, and the exports have been 100,000 bushels of wheat and 780,000 bushels of corn for the week. Prices closed strong.

For wheat latest sales are of No. 2 umber at $1.54@1.54½; ungraded amber at $1.52¾; No. 1 white at $1.52@1.53; No. 2 red, 1.55¼@1.56¼; do., Dec. option, at $1.52¾@1.52¾; do., Jan., at $1.53¾@1.55; do., Feb. at $1.57@1 58¾; ungraded white at $1.53@1.54½; No. 1 red at $1.55¼@1.56; do, Dec. option, at $1.55¾@1.56¼; do, Jan., at $1.57¼@1.59 do. Feb., at $1.60¼@1 12¾; do., ungraded red, at $1.44@1.54; No. 3 spring, at $1.38@1.39; ungraded spring at $1.29@1 36. Corn at for New York No. 2 at 64¼@61¾c.; do., December, at 61¼@64¼c.; do., January, at 61¾c.; do., February, at 64¼c.; New York steamer mixed at 63c.; do., December, at 61¼@62¾c; do., January, at 60¾c.; ungraded western mixed at 61@62c.; No. 3 at 61@61¾c.; round yellow, new, at 63¾c.; No. 2 white at 67c. Oats at for New York No. 1 white at 53¾@54c.; New York No. 2 white at 52@52¾c.; New York No. 3 white at 50@51¾c.; New York No. 1 at 50¾c.; New York No. 2 at 50@50¼c.; do., New York No. 3 at 48¾c.; rejected at 48c.; ungraded white western at 49@52¾c.; ungraded mixed western at 49@50¾c.; white State at 51¾@53c.; mixed State at 5:@52c.; No. 2 Chicago at 50¾c. afloat.

HAY AND STRAW.—There is a fair call for supplies and a steady market. Shipping hay quoted at 60@65c.; retail lots at 70@80c. for medium, and 80@95c. for prime; clover at 45@60c. Straw at 90c.@$1 for long rye; 65@75c. for short rye, and 55@60c. for oat.

Exports for week, 1,518 bdls.

HONEY—Sales for store decoration have increased with the approach to the holidays and prices are firm. Single comb white clover, ₱ lb., 18@19c.; larger, 14@16c.; buckwheat, 12@14c.; clover extracted, 11@13c.; strained, 8@10c.

HOPS.—The receipts for the week have been 1,200 bales, while the exports have been only 359 bales. Emmet Wells in his weekly circular says: "We are now passing through the usual dull season preceding the holidays, and very little business will be transacted in hops for the next three weeks. Much disappointment is felt on the part of speculators by the downward course of prices, most of them at the time they put their money into hops being firm believers in a steady market and higher prices before the close of the year. The hope now indulged in of a better market immediately after the holidays may possibly be realized; if it is, however, it will be a state of things quite different from what has been the usual course of the trade in former seasons. Our predilection is, that if any improvement at all takes place it will be later in the season, at a time when the market may become influenced by unfavorable crop prospects, the same as was the case last summer.

Prices are entirely nominal New Yorks, new crop, choice, 38@40c.; New Yorks, new crop, medium, 34@36c.; New Yorks, new crop, low to fair, 30@32c.; Eastern, new crop, 30@33c.; Wisconsin, new crop, 30@33c.; Yearlings, 7@18c. Olds, all growths, 4@10c.; Pacific coast, new, 35@40c.; Pacific coast, olds (nominal), 7@12c.; Bavarians, 50@65.

OIL-CAKE.—Western is quoted at $35.00 ₱ ton.

PROVISIONS.—Hog products have been active and closed strong. Mess pork quoted at $11.80@11.85 for old for December and January; $13 45@13.50 for new for January; $13.45@13.50 for new for February, and $13 50 for March. Bacon at 7c. for long clear and 7¾c. for short clear. Lard at $7.62½@7 70 for spot lots of old and new; $7@7½ for new for January; $7 60 for old for do.; 7.82½@7.85 for new for February; $7.70@7.72½ for old for do.; $7.92½@7.95 for new for March; $7.82½@7.85 for old for do. Stearine at 7¾@7¾c. for Western. Tallow at 6 11-16@6¾c. for prime. Beef at $10.50@11 for prime mess; $11@12 for extra mess. Beef hams at $16.

POULTRY AND GAME.—Cooped stock is in large supply, and easy rates rule right through. Chickens and birds, 7@8c.; Turkeys, 7@9c.; Ducks, 15@17c.; Geese, Western, 70@10c. prime to fancy, near by, 1.25@1.75. Dressed Poultry is quoted steadier, but rates have to be kept low even for fresh receipts in order to handle the winter supply. Qualities are less mixed than they were, and sales are helped thereby. The weather does not promise an active holiday trade; and it is certain there will be no fancy figures. Poultry resources now make it a common-place item.

Turkeys, New Jersey and Pa., prime, 12@12½c.; State, Northern Ohio and Mich. 11¾@12c, other Western, prime, 11@11¾c.; do. fair to good, 9@10¾c.; Philadelphia, dry-picked, 13@13c.; do., chickens, 12@12¾c.; do., Jersey, per lb., 10@11c; do., State and Western, prime, 9@10c. fair to good, 7@8c.; Phila. fowls dry-picked, 10@11c.; N. J. do., 9@10c.; State, dry-picked, 8@9c.; Western, dry-picked, 6@8c; Geese choice, 10@11c.; others, 8@9c.; Ducks, choice 12@13c.; other 9@11c. Prices are strong for game that will carry over to Christmas. Rough lots seem well out, and if the weather hardens buyers will purchase ahead for decorative use.

Wild Ducks, Canvas-backs, Havre de Grace, pair, $4; Norf., $3.50; do. red-heads, $1@1 25; Mallards, 60@80c.; Teal, 40@50c; Black, 50@60c.; common 20@30c. Quail, trapped, ₱ doz., $2 50; Partridges, State, ₱ pair, $1.12@1.25; do. Western, $1@1.12. Grouse, $1@1.25; Wild pigeons, flight, ₱ doz., $1.25; Rabbits, ₱ pair, 30@35c.; Hares, 30@35c.; Minn. venison, saddles, ₱ lb., 13@15c.; other, 12@13c.; whole deer, 8@9c.

SEEDS—Grass is quiet. Clover at 8¾@9¼c. for prime to choice; 9¾@9¾c. for extra choice. Timothy at $2.75 for prime.

TOBACCO.—Export demand is slack and the home trade moderate, with prices unchanged.

VEGETABLES.—Railroad supplies are liberal but there is some accumulation from previous receipts. The heartiest is weak and ordinary lots decidedly in buyer's favor for wholesale parcels. Onions show stiff figures, particularly for fine large white. Cabbage higher. Celery not turning out as fine as last year. Potatoes, Nova Scotia Rose, $1.50@$1.75; prolific, 1.37@1.50; Mercer, $1.25; State Peachblows, d.-h., 2@$2.15; Snowflake, d.-h. $1.37@$1.62; Early Rose, Maine, d.-h. $1.50@1.75 State, $1.15@2 12; do. in bulk, 1.37@1.51; do. Peerless, $1.25@$1.62; N. J., do., 87c.@$1.00. Sweet potatoes, $3.25@$3.50 squash marrow, ₱ bbl., 75c@$1.25; Hubbard, $1.25@1.50; cabbage, white, per 100, $4@6; red do., cabbage, $7@8; onions, white, per bbl., $3 00@5.00; do. red, $2.25@$2.50 do., yellow, $2.50@2.75; do., Chester, $1.75@2.50 beets, $1@1.25; Russia turnips, 75c.@$1; carrots, 75c.@$1; pumpkins, per 100, $8@10; celery, per doz., 75c.@$1.

Exports potatoes for week, 7 850 bbls.

WOOL.—Demand is slack as usual at this period of the year, or approaching the holidays with prices, however, very firm.

Ohio, Pennsylvania and West Virginia—XXX, 52@55c.; XX, 49@52c.; X, 49@52c.; No. 1, 53@56c.; No. 2, 47@50c.; common, 43@45c.; combing, 55@57c.

New York, Michigan and Wisconsin—XX, 43@48c.; X, 43@47c.; No. 1, 50@55c.; No. 2, 46@50c.; common, 40@41c.; combing, 50@55c.

Iowa, Vermont and Illinois—X and XX, 42@46c.; No. 1, 48@52c.; No. 2, 44@46c.; combing, 43@53c.

Missouri, Kentucky and Tennessee—Washed fleece, 46@53c.; unwashed fleece, 35@42c.; unwashed combing, 35@45c.

LIVE STOCK MARKETS

NEW YORK, Saturday, Dec. 20.

BEEVES.—Receipts for the week, 10,552 head; do. last week, 9,740 do. There has been a good rule for cattle all the week and the quick sale and high rate of premium stock gave the market an old-fashioned tune. One drove of 20 fancy four year old brought 11¾c.@12c. to dress, 58lbs; other lots 7 to ½ head found ready customers at what became an established range for high grade 10¾@12c.; common to fair, steers, 8@9¼c. to dress 55lbs.; good to choice, 9¾@10¾c.

MILCH COWS.—There are no new features. Demand light.

VEAL CALVES.—Live calves in light supply and prime. Choice N. J. and Bucks Co., 7¾@7¾c.; fair to prime including, State, 5@7¼c.; Mount Hollys 5@7¼c, Buttermilk, 3½@5c.; grass, 2@2½c. Hog dressed 7¾@10¾c.

SHEEP AND LAMBS.—Receipts for the week, 27,087 head; do. last week, 25,368 do. The market has been good for sellers with moderate supplies: the range for sheep 4@5½c. fair to choice. Lambs, 6@7¼c. ordinary to extra.

HOGS.—Receipts for the week, 30,376 head; do last week, 26,378 do. There has been an easy feeling in pork and prices have favored large buyers: live, $4.50@$4.65 per 100; N. J, dressed light, 6¾@6¾c.; medium, 6@6¼c; heavy, 5¾c@5¾c.; city dressed, 5¾@6¾c. Pork tenderloins, 9c. in boxes.

THE ATLANTIC MONTHLY

BEGINNING with the January number, now ready, has several points worthy of special attention:

1. It is enlarged to 144 pages.

2. It is printed on beautiful type, larger than before, making a very handsome, legible page.

3. It is printed on uncalendered paper, so that it can be read by artificial light as comfortably as by daylight.

4. MR. HOWELLS begins a most interesting Serial Story; and, later in the season, will be given Stories by T. B. ALDRICH and HENRY JAMES, Jr.

5. The ATLANTIC will maintain its eminence as the "leading literary magazine of America," with *Short Stories* of the highest and most entertaining character; and *Poetry, Essays, Criticisms, Travel Sketches*, and articles on important topics in *Education, Politics, Industry, Social Science*, and whatever interests American readers, by LONGFELLOW, WHITTIER, EMERSON, HOLMES, LOWELL, MRS STOWE, HIGGINSON, STEDMAN, STODDARD, HALE, WARNER, WARING, HARTE, WHITE, SCUDDER, H. H., MISS LARCOM, MISS PRESTON, MISS JEWETT, MISS WOOLSON, ROSE TERRY COOKE, MRS. PIATT, MARK TWAIN, DE FOREST, BISHOP, MR PIATT, and scores besides of the best American writers.

TERMS:—$1.00 a year, in advance, *postage free*; with superb life-size portrait of HOLMES, LOWELL, WHITTIER, BRYANT, or LONGFELLOW, $5.00; with two portraits, $3 00; three portraits, $7.00; four portraits, $8.00; with all five portraits, $9.00.

Remittances should be made by money-order, draft, or registered letter, to

HOUGHTON, OSGOOD & CO., BOSTON.

THIS NEW
ELASTIC TRUSS
Has a Pad differing from all others, is cup shape, with Self-Adjusting Ball in center, adapts itself to all positions of the body, while the Ball in the cup presses back the Intestines just as a person would with the Finger. With light pressure the Hernia is held securely day and night, and a radical cure certain. It is easy, durable and cheap. Sent by mail. Circulars free.
EGGLESTON TRUSS CO., Chicago, Ill.

Reading for the Young.

KITTY'S CHRISTMAS TREE.

ALICE P. ADAMS.

KITTY had been very busy for several weeks, for you see there was to be a Christmas tree at her home, and all the uncles and aunts and cousins were invited; so every minute of her time was occupied in making presents.

She was so fearful that all would not be finished in time that she took her work to school, and crocheted under the desk while she was *apparently* learning her geography lesson. A number of girls did this, and Kitty never thought of cheating.

It was soon stopped, however, for Mr. Kimball, noting the imperfect lessons, knew that something must be wrong, and was more watchful accordingly.

One day Grace Henley made a mistake in her tidy, and she had to unravel part of it; her thread knotted, and, forgetting where she was, she held it up in plain sight while she tried to disentangle it. Mr. Kimball's eye was on her before long, attracted by the bright scarlet, and the girls coughed and tried in vain to warn her; for all her thoughts were centred on that obstinate snarl.

But she heard the stern voice that said, "I wish to call the attention of the school to that industrious young lady sitting in the fifth row, next the middle aisle."

How she started and pushed her work into the further corner of her desk, while the girls sympathized and the unfeeling boys laughed!

But that was not the end. "Miss Grace, you may bring that gay arrangement here to the desk. I want to examine it more closely, as the brief glimpse I had did not satisfy my curiosity."

Very slowly Grace obeyed, with crimson face and downcast head, and Mr. Kimball, taking the tidy from her unwilling hand, gravely inspected its scarlet and white intricacies; then, laying it upon the desk, and motioning for her to resume her seat, he delivered a long lecture about the sense of honor which should prevail in schools, but seemed entirely lacking in his, and concluded by saying that if he saw any more fancy-work during school hours, he would take care of it, and the owner would never see it again.

This alarmed Miss Kitty, and thereafter she confined her work at school to recess, and the intermission hour. But she was so industrious at home that the last present was finished the day before Christmas.

For papa she made a case of card-board, bound with blue ribbon, for squares of court-plaster. On one side, embroidered in blue silk, were the words:

"If knife or pin,
"Or aught offend,"

and on the other,

"Go, little case,
"Assistance lend."

She made for mamma a beautiful case for her scissors, of quilted cardinal satin, trimmed with tiny cardinal bows. For little Dick she crocheted a pair of reins, and with aunt Mary's help she constructed a most wonderful rabbit from Canton flannel (woolly side out) for the baby.

The relatives were all served alike for fear they would think she was partial. Each of the three aunts was destined to receive a receptacle for burnt matches, each of the three uncles a shaving-case, and each of the cousins an embroidered silk bookmark.

Kitty's papa and mamma intended to have the tree on Christmas Eve, until they learned that the Sunday-school entertainment was to be held on that night, so they gave their invitations for Christmas evening.

"Dear me!" sighed Kitty, on the morning of the eventful day. "All my things are ready, and I don't know what to do. It don't seem as if I could *possibly* wait till night."

"You might string some pop-corn while papa and Uncle Nat are gone for the tree," suggested mamma, who was trimming the parlors. "And you could string some cranberries too, if you have time. The red and white festoons would look very pretty among the presents when the candles are lighted."

So Kitty commenced to string pop-corn and cranberries, but before she had half enough done they came with the tree. Such a beautiful tree! Its top swept the ceiling of the back parlor, and how symmetrical were its green branches. Kitty was sure that it was the nicest tree in town.

And now commenced the work of arranging the gifts; most delightful work Kitty thought it would be, but she was soon banished from the room with the assurance that she would help just as much if she would go on making the ropes of cranberries and pop-corn. So she confided part of her gifts to mamma and the rest to Aunt Mary, and took up her position on a convenient sofa, where she could catch occasional glimpses of the splendor when the door opened and the favored one passed in and out. It seemed as if the door-bell rang every few minutes, and mamma kept hurrying back and forth with very mysterious looking parcels half hidden under her apron. Once she forgot to latch the door, and left such an enticing little crack that Kitty could not resist the temptation to peep. So she dropped her needle and crept softly to the door when Uncle Nat unexpectedly coming in and seeing her purpose, gave her a push that made the door fly open, and sent her plump against mamma who was bestowing a bewitching little work basket among the green boughs.

"Oh! I didn't see! I didn't see anything, hardly!" cried Kitty shutting her eyes as the workers about the tree exclaimed indignantly. "It was all Uncle Nat. He pushed me in"

"Pushed you off the sofa?" queried mamma with her eyebrows raised unbelievingly.

"Well—not exactly that—" murmured Kitty. "I wasn't on the sofa."

"Ha, ha, miss! that's what comes of *peeking!*"

A MERRY, merry Christmas
To crown the closing year!
Peace and good will to mortals,
And words of sacred cheer.

What though the wind at evening
Blow harsh o'er land and sea,
If eager hands and joyful hearts
Light up the Christmas tree.

In the midst of your pleasures,
Your gifts and your treasures,
Remember the one which our Father hath given,
The purest and fairest
The richest and rarest,
The gift of a blessed Redeemer from Heaven.

laughed Uncle Nat as the excited lady again took up her string or pop-corn.

The door was scrupulously closed after that, and when it was nearly dark mamma came out and told Kitty to run up stairs and get dressed for the evening. She arrayed herself in her best wine-colored cashmere, which was magnificently bedecked with light blue bows for the occasion, settled the pretty gold chain that was her last birthday present, and with her best handkerchief, freshly perfumed, in her hand she went down stairs, her cheeks flushed with anticipation.

"Dear me!" she cried impatiently after a few minutes' waiting in the parlor; "I wish they *would* hurry. Seems as if I can't wait another minute.

But she had to wait several before there came a loud peal from the bell, when she flew to the door crying, "Merry Christmas!" to the smiling people who came trooping in.

Before long the sprightly company had assembled—the last comers being two young Sophomores who affected an indifference to Christmas trees, and "only came to please Cousin Kitty," and all eyes were directed expectantly toward the closed folding doors.

They were not kept in suspense long, for the doors were soon thrown back and disclosed the tree in all its splendor, with papa, dressed as Santa Claus, bowing beside it. He made a little speech, and then all rushed in to look at the tree before the presents were taken off.

Well, it was a pretty sight. The tree was set, to all appearance, in a bank of moss, which was interspersed with lovely greenhouse plants destined to make several homes cheerful during the long winter. The festoons of red and white were supplemented by long chains of variously-colored paper; gaily decorated egg-shells hung from every tiny bough; little waxen canaries swung in scarlet rings; horns of plenty filled to overflowing would shortly reward those who had waited long for this night; and the wax tapers shone brightly on the presents that bent the green boughs, and the larger ones that lay on the table at the side.

Yes, it was certainly a wonderful tree, and I could not begin to tell half the gifts that Santa Claus and Kitty and two or three of the cousins distributed among the merry company. But as I disclosed Kitty's secrets, it is but just that I should tell how her friends remembered her.

Among the first articles taken from the tree was that dear little work-basket, lined with dainty blue silk, and filled up with thimble, scissors, needles, silk, cotton, and other essentials. This was mamma's present to her daughter.

Papa's gift was a writing desk well stocked with tinted and gilt-edged paper, and tucked away in a compartment of its own was a little pearl-handled gold pen, which made her eyes sparkle.

Beautifully illustrated copies of Hawthorne's "Tanglewood Tales" and "Wonder Book," a bottle of Sweet Briar, a silver filagree pin for her hair, a box of handkerchiefs embroidered with a handsome K, and an onyx ring on which was engraved a little forget-me-not, were among the other presents given her.

Do you wonder that she exclaimed as she kissed mamma good-night, "I've had a *perfectly elegant* time! I don't believe there *could* be a nicer tree than ours, do you, mamma?"

DEAR UNCLE MARK:—The cold winter is at hand yet it is my season, the time I love best. If I, like Joshua, could make the sun stand still, it would be winter all the time. All my vegetables are housed for winter, and my poor flowers have all been mowed down by Jack Frost. I want all the cousins to mention what virtue they admire most; for my part it is contained in the following:

If wisdom's way ye wisely seek,
Five things observe with care;
Of whom you speak, to whom you speak,
How, when and where.

I have only seen one who attained this virtue of discrimination to perfection, and since I met that person, I have striven hard to be as wise, but I can assure you, I have not reached perfection yet; so give me a recipe for it, whoever has one. Good-bye, Uncle Mark. I remain your loving

Temistguemangue. LIZZIE A. PICHA.

Various.

BRIEFLETS.

THE poultry should be fed meat three or four times a week with their other food when, the ground being frozen, there are neither worms nor insects for them to pick up about the premises. . . It makes little difference how well poultry are cared for. They may have everything they need. But if too many are confined in one house and run, they cannot be made to thrive and give a paying number of eggs. . . The Ed. of the American Rural Home says that if all farmers would *partially* substitute good beef, mutton, fish, chickens, and turkeys, for pork, in their diet, they would be healthier, stronger, and happier for the substitution. . . The Philadelphia Record says that a good careful man placed in charge of a badly-managed herd of cows increased the flow of milk to an extent sufficient to pay his wages. . . Weather Signs.—When you see a doctor and nurse take charge of the house, look out for squalls.—Wheeling Leader. . . The man who pays cash is a person of no account. Credit lost. . . The Rural World is entitled to much credit for its persistent, systematic encouragement of the Sorgo industry. Credit to whom credit is due. . . A new Pullman car is to be called the Gen. Grant. It would be a better name for the "smoker."—Boston Comm. Bulletin. . . The monotony of life is much enhanced by having no change. . . A partial failure of the wheat and raisin crops in Ooroomeeyah, Persia, has produced a severe famine. Only about one-tenth part the usual amount of food has been raised; the government is doing nothing, and the people are starving. . . . Hog-guessings are beginning to be reported. . . Opium is now being produced in the Sonoma Vally, Cal. It's better than the Oriental article, and though the cost of production is greater, this is counterbalanced by the absence of import duty. . . On Tuesday, the 16th, motions were agreed to in the House for establishing Public Land Offices in the Territories of Montana and Dacotah. . . The Hudson River is full of floating ice, and navigation on it is about to close for the season. . . Pleuro-pneumonia has broken out among the cattle of James Merrill, of Haverhill, N. H. Gov. Head called a meeting of the Council on Friday last, and appointed a committee to take steps at once to arrest the spread of the plague. Farmers thereabouts are much excited. . . Eight thousand "Union" pork-packers are on strike in Chicago because non-union men were allowed to work. Several of the packeries are idle, and more working very short-handed. Some say the pork-packer's strike is merely a trick of the packers to lower the price of hogs, by causing the market to be over-stocked. All the hogs in the yards are being quickly picked up at low prices. . . . The depression in the hog market in Chicago is sure temporarily to reduce prices elsewhere, but—hold on to your hogs, friends, hold on to your hogs. The supply is less this year than last, the demand greater, and hogs are pretty sure to rule high before winter is over. . . The Wisconsin Dairymen's Association will hold their annual meeting at Elkhorn, January 14 and 15, 1880. . . Most of the French bouquets are made of one kind of flowers only.

WHAT OTHERS SAY.

SPREADING MANURE.—We are glad to see a corroboration of what has been said under our History of a Poor Farm, by so good an authority as Professor S. W. Johnson. He says in the Conn. Farmer, in answer to an inquiry: Manure from the yard or stable rarely contains such an amount of volatile fertilizing matter as should deter from spreading it broadcast on the surface when most convenient. Unless manure is very rich, as from grain-fed animals, and is in an active state of fermentation, hot and smoking, and exhales a distinct smell of hartshorn, there can be no loss from exposure, and in any case, the loss will be less by spreading out thinly, than by dropping it in small heaps, because spreading means cooling and the stop of fermentation. The soil, if not sand, is an energetic absorber of ammonia, and will not allow much to escape. But manure, when properly handled, need not suffer any waste from evaporation. A moderate and regulated heating of fresh manure results in the formation of humic acid, which secures the ammonia from loss by evaporation. This moderate heating it should have before hauling out, or in cold weather before it heats at all. The advantages of spreading manure from the wagon as it is drawn out, are a saving of labor and an even distribution of the soluble salts (ammonia, potash, phosphate, &c.), in the soil by rain. If the manure is heaped on the field and gets a heavy rain before spreading, the ground under the heaps receives an undue share of the best part of the manure. Independently, however, of loss by evaporation, there may be circumstances when it is best to get the manure into the ground before it has had a chance to become dry, for it distributes much better when moist and swollen with water, than when "chippy" or "snuffy" in texture, and is ready at once to act as manure, whereas dry manure must recover moisture before it can be of any use.

PASTURING WHEAT.—"Several with whom I have talked," says a writer in the Detroit Free Press, "are of the opinion that it is rather beneficial than otherwise to pasture wheat in the fall. A notable instance of apparent benefit from fall and winter feeding of the top, was with Mr. Payne Axford, of Orion, who pastured a piece of thirty acres during the fall and winter two years ago, turning on his stock whenever the ground was firm and frozen, taking them off when the ground was soft during the fall and early part of winter. This field, he says, yielded thirty-nine bushels to the acre, and was probably the best yield in the neighborhood. One piece of twenty acres had equally as fine an appearance through the season, but was not pastured, and yielded only thirty-one bushels to the acre. Mr. A. is a full believer in pasturing wheat, and is now, although the ground is very wet and soft, keeping his stock on his wheat field every day. It seems to me a barbarous practice, nevertheless, and although I have a field of heavy growth, I think I will take the chances of its natural top."

CARE OF POULTRY.—The American Poultry Yard says: We must shortly close up the doors and windows of our fowl-houses, to guard the occupants against the sharp air by day, and the chillier atmosphere at night. But let us be sufficiently careful to perform this operation sensibly, and not so stifle the birds that the emanations from their bodies will infect the internal atmosphere of the premises, and thus poison or sicken the stock. *Ventilate* the premises thoroughly every day and every night in the year. No matter how hot, how cold, how dry, the fresh air of heaven *must be* afforded your fowls, either by allowing them freedom out-of-doors altogether, or by supplying their quarters with this necessity to their comfort and thrift.

ORIGIN OF EARLY ROSE, ETC.—The Early Rose was raised by Mr. Albert Bresee, of Hubbardton, Vt. In what year it began its career, Mr. Pringle says, in the Vermont Record and Farmer, he is unable to say, but it was first put in commerce in 1868. Its origin, he understands, was in this wise: Mr. Bresee had been raising seedling potatoes for many years without getting anything superior to the parent sorts. One fall his hired man, while digging a few rows of the Garnet Chili, which had never been known to have seed-balls, found on the stalks a little ball, scarcely larger than a pea. From this Mr. Bresee raised all his named sorts, Early Rose, Bresee's Prolific, Peerless and King of the Earlies.

HOW NOT TO DO IT.—The true story is told of a well-to-do New Hampshire farmer who last spring gave his fifteen-year-old son a motherless lamb; Johnnie brought it up carefully, and the past fall the father sold it with others and put the money in his own pocket, an act which The Manchester Mirror indignantly characterizes as "The meanest robbery that could be perpetrated." It will not be strange if that youth speedily develops an irresistible longing for town life, or the Western country, and the old man will murmur because he is left alone in his age!—N. Y. Tribune.

PERSONAL ITEMS.

The Countess Montijo, mother of the ex-Empress Eugenie, once kept a millinery store in Brussels

The Rev. Dr. John Hall, of this city, is said to have received over $10,000 in wedding fees during the present year.

Judge Hunt has resigned his seat on the bench of the U. S Supreme Court, and Senator Edmunds has accepted the place.

Buford, who was convicted at Frankfort, Ky., and sentenced to imprisonment for life for the atrocious murder of Judge Elliot, has been granted a new trial.

A. J. Hamilton, City Tax Collector of Los Angeles, Cal., has absconded with $9,000 This is the fourth defalcation on the part of officers of that city in the last five years.

On Tuesday week the U. S. Senate, without a dissentent voice, confirmed the nomination of Secretary of War, McCreary, to be U. S. Circuit Judge for the Eighth Circuit.

The two highwaymen who assailed John Hamm a thin, bent, consumptive little man, near Vincennes, Ind., waked up the wrong customer, for he drew a pistol and shot one of them, and pounded the other insensible with the weapon.

Walter T. Colquitt, the father of Governor Colquitt, of Georgia, and James Rockmore were famous preachers in that State in former days, and this story is told of an encounter which they once had: Mr. Colquitt, while on the way to church one Sunday, stopped at a peach orchard by permission of the owner and ate some of the fruit. Mr. Rockmore, riding by on his way to his meeting, called out: "Never mind, Colquitt, I'll bear witness in heaven against you for stealing those peaches." "Hold on," said Colquitt, drawing a blank book and pencil from his side pocket; "let me take your interrogatories; you wont be there."

Obstructions of the kidneys and attendant organs will prove fatal if not removed by Hop Bitters.

What Old Subscribers Say

About the "Chicago Weekly News" When They Renew Their Subscriptions.

R. Cogley, Lolus, Union County, Ind., says: "I think the NEWS the best weekly extant, and do not wish to do without it."

D. M. Savage, Flint City, Mich., says: "We can not do without the WEEKLY NEWS. We are taking three other papers beside, but we get more news in your paper than the rest all put together."

Wm. McCallum, Cabot, Ark., says: "It just suits me; can't do without it."

The Rev. J. Hoberg, Monroe, Oregon, says: "I have been a subscriber to the CHICAGO NEWS for a number of years. The NEWS is certainly one of the best newspapers of the land. On account of the hard times, and my limited income (I am a Methodist preacher), I thought of doing without the paper, much as I like it. But wife and children give me no rest till I send for it again, so I inclose 75 cents."

Willie J. McKinney, Milburn, Ky., says: "I think your WEEKLY is one of the best papers published in America, and is not confined entirely to political news."

H. F. Wellborn, Snake Prairie, Bastrop County, Texas, says:
"Please send me a few copies of your paper (weekly) and I will get you a club. I consider it the cheapest and best newspaper in the United States."

Lawrence Walsh, LeMars, Iowa, says:
"You will find inclosed $1 for sixteen months' subscription to the WEEKLY NEWS. I would not be without the WEEKLY NEWS if it cost $2 a year."

Noel Conturier, Provement, Leeland County, Mich., says:
"I send you the within inclosed $1 for sixteen months' subscription for the CHICAGO WEEKLY NEWS. I have taken papers from every direction in the United States, and have found the paper I want at last. I think everybody else ought to like it. Why there's nothing like it for 75 cents a year!"

An anonymous subscriber writes expressly to state his satisfaction with the NEWS, "for," he says, "I want a paper that treats both political parties fairly."

The above extracts are sufficient to show in what esteem the CHICAGO WEEKLY NEWS is held by its old subscribers. It is a FAVORITE FAMILY NEWSPAPER, because it gives all the news, is independent and impartial in its presentation of political intelligence, publishes six completed stories in every issue, has correct market reports, and generally furnishes a complete, trustworthy and pure family journal AT THE LOWEST PRICE IN THE UNITED STATES —SEVENTY-FIVE CENTS A YEAR, postage included. A dollar bill pays for sixteen months. Address, VICTOR F. LAWSON, PUBLISHER, 123 FIFTH AVE, CHICAGO, ILL.

Wit and Humor.

A CORRESPONDENT asks us: "What is your idea of the saddest thing on earth?" Easy enough! A tailor with a good memory.—[Wheeling Leader.

A BRIDAL couple from Washoe valley at breakfast in a Reno hotel, conversed as follows: He—"Shall I skin you a pertater, honey?" She—"No, thank you, deary. I have one already skun.—*Denver News.*

WEBSTER tells us that the definition of a bonnet is "a covering for the head," but a glance at some of ladies' headwear forces home the idea that it is merely a false-hood.—*Danielsonville Sentinel.*

JO COOK on Ingersoll: "His lack of religion sufficiently illustrates his lack of sense." Bob Ingersoll on Jo Cook: "His philosophy is the theology of New England, seasoned with poor German thought—that is to say, he mixes sauerkraut with his beans."

A CERTAIN bald-headed man had a large spider painted on the top of his head in fly-time, and the first day it scared his wife into a fit, and he was knocked out of his chair three times by people who wanted to kill the poisonous insect, without alarming the old gentleman by telling him it was there.—*Boston Post.*

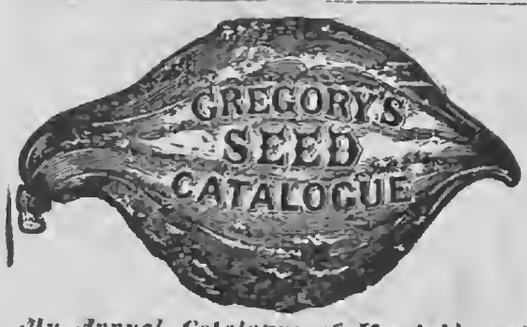
WE don't know whether it is old or not, but we heard a lady ask a friend, in a street car, the other day: "Annie, is it proper to say this 'ere, that 'ere?" "Why, Kate, of course not," was the reply. "Well," said Kate, "I don't know whether it is proper or not, but I feel cold in this ear from that air." The conductor fainted.—[Phila. Item.

CIRCUMSTANCES ALTER CASES.

Servant—(to caller inquiring for the doctor). The doctor is not in, sir.
Caller. Sorry to hear it. I come to pay a bill I owe him.
Servant. Oh, that's it! Then—then come in, and I will look once more.

Something for the New Year

The world renowned success of Hostetter's Bitters, and their continued popularity for a quarter of a century as a stomachic, is scarcely more wonderful than the welcome that greets the annual appearance of Hostetter's Almanac. This valuable medical treatise is published by Hostetter & Smith, Pittsburgh, Pa., under their own immediate supervision, employing 80 hands in that department. Ten cylinder printing-presses, 8 folding machines, 5 job presses, &c., are running about eleven months in the year on this work, and the issue of same for 1880 will not be less than ten millions, printed in the English, German, French, Welsh, Norwegian, Swedish, Holland, Bohemian and Spanish languages. Refer to a copy of it for valuable and interesting reading concerning health, and numerous testimonials as to the efficacy of Hostetter's Bitters, amusement, varied information, astronomical calculations and chronological items, &c., which can be depended on for correctness. The Almanac for 1880 can be obtained free of cost, from druggists and general country dealers in all parts of the country.



My Annual Catalogue of Vegetable and Flower Seed for **1879** rich in engravings, from photographs, of the originals, will be sent FREE, to all who apply. My old customers need not write for it. I offer one of the largest collections of vegetable seed ever sent out by any seed house in America, a large portion of which were grown on my six seed farms. *Full directions for cultivation on each package. All seed warranted to be both fresh and true to name; so far, that should it prove otherwise, I will refill the order gratis.* The original introducer of the Hubbard Squash, Phinney's Melon, Marblehead Cabbages, Mexican Corn, and scores of other vegetables, I invite the patronage of *all who are anxious to have their seed directly from the grower, fresh, true, and of the very best strain.*

THE YOUTH'S COMPANION
A WEEKLY PAPER FOR YOUNG PEOPLE AND THE FAMILY

1880. Increased in Size. **Vol. 53. Elegantly Illustrated.**

It aims to be a favorite in every family—looked for eagerly by the young folks, and read with interest by the older. Its purpose is to interest while it amuses; to be judicious, practical, sensible, and to have really permanent worth, while it attracts for the hour.

It is handsomely illustrated by the best artists, and has for its contributors some of the most attractive writers in the country. Among these are

Harriet Beecher Stowe, James T. Fields, E. P. Whipple, J. T. Trowbridge, Dinah Muloch Craik, Rebecca Harding Davis, Sarah Winter Kellogg, James Parton, Louisa M. Alcott, Louise Chandler Moulton, Dr. Henry I. Bowditch, C. A. Stephens.

The variety and worth of its contents will make it a repository of the choicest literature; a library of tales, travels, adventure, history and biography; a "Companion" for the school, the study and the fireside. It will give

Serial Stories, Stories for Girls, Stirring Tales of Adventure, Letters of Foreign Travel, Brilliant Sketches, Poems, Editorials on Current Events, Two Hundred Short Stories, Valuable Papers on Health, Anecdotes and Incidents.

Subscription Price, $1 75. Specimen copies sent free. Please mention in what paper you read this advertisement. Address **YOUTH'S COMPANION, Boston, Mass.**
